HUMAN MACHINE INTERFACE (HMI)

HMI dashboard, crafted using Qt C and QML, empowers users to manipulate the movements of a six-axis arm effortlessly. With real-time feedback displayed on the dashboard, users can visualize and fine-tune the arm's actions, enhancing precision and control.

Key Features

- Simulation
- Synchronization
- Data Transmission
- Automation
- Optimized Performance

Key Features

- Advanced Threat Protection
- Enhanced Security Measures
- Streamlined Administration
- Proactive Threat Mitigation
- Optimized Network Performance

CROWD MANAGEMENT AND SECURITY

The software provides an end to end solution for the monitoring of Human Resources in the working environment through Artificial Intelligence

FIREWALL CONFIGURATION AND MANAGEMENT SYSTEM

Firewall Configuration and Management Systems include OPNsense firewall that provides robust network security features and intuitive management interfaces, offering advanced protection for networks of all sizes. With its modular design and regular updates, it ensures reliable defense against cyber threats, attacks while promoting flexibility and ease of use
