Electives	112-235

VISION OF THE DEPARTMENT

To educate the students to face the challenges pertaining to Civil Engineering by maintaining continuous sprit on creativity, innovation, safety and ethics.

MISSION OF THE DEPARTMENT

- i. To prepare students to learn beyond the syllabi and textbooks.
- ii. To train students through periodical in-plant training and industrial visits.
- iii. To motivate students to pursue higher education through competitive examinations.
- iv. To create Centre of Excellence in the emerging areas of Civil Engineering.
- v. To give a broad education to the students on recent areas of development through interactions and camps.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- I. To demonstrate technical competency in their chosen career path of academics, research, public service or entrepreneurial start-up.
- II. To execute planning, design and analysis of Civil Engineering systems catering to the societal and industrial needs with academic or research perspective adapting to the sustainable development goals.
- III. To exhibit leadership qualities in their intellectual pursuit upholding professionalism, ethics and sustainability.

PROGRAMME OUTCOMES (POs)

- 1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, andthe cultural, societal, and environmental considerations.
- 4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- 6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and multidisciplinary environments.

12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

PSO1Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability. PSO2 Graduates will be able to implement various software tools and smart technologies to solve awide range of Civil Engineering problems with innovative research attributes.

* The lateral lateral entry students have to complete these courses during III and IV semester. # Students admitted during academic year 2022-2023 studied this course in semester II.

Students admitted during academic year 2022-2023 studied this course in semester III.
Applicable only for the students admitted during academic year 2022-2023.

22MA101 ENGINEERING MATHEMATICS I

Course Objectives

- To impart mathematical modeling to describe and explore real-world phenomena and data.
- To provide basic understanding on Linear, quadratic, power and polynomial, exponential, and multi variablemodels
- Summarize and apply the methodologies involved in framing the real world problems related to fundamental principles of polynomial equations

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to thesolution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiatedconclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

- 1. Implement the concepts of mathematical modeling based on linear functions in Engineering.
- 2. Formulate the real-world problems as a quadratic function model
- 3. Demonstrate the real-world phenomena and data into Power and Polynomial functions
- 4. Apply the concept of mathematical modeling of exponential functions in Engineering
- 5. Develop the identification of multivariable functions in the physical dynamical problems

Articulation Matrix

5	1	2	-	-	-	-	-	-	-	-	-	-

UNIT I

MATHEMATICS MODELING OF LINEAR FUNCTIONS

The geometry of linear equations - Formation of linear equations: Method of least squares and method of regression -Vector spaces: Basic concepts with examples - Linear combination - Eigen values and vectors

UNIT II

MATHEMATICAL MODELING OF QUADRATIC FUNCTIONS

General form of a quadratic function - Basic relationships between the equation and graph of a quadratic function - Sum of squares error and the quadratic function of best fit - Quadratic forms: Matrix form - Orhtogonality - Canonical form and itsnature

UNIT III

MATHEMATICAL MODELING OF POWER AND POLYNOMIAL FUNCTIONS

Characteristics of the graphs of power and polynomial functions - Fitting of power and polynomial functions using the method of least squares - Local maxima and local minima of power and polynomial functions - Power series of functions with real variables, Taylors series, radius and interval of convergence - Tests of convergence for series of positive terms - comparison test, ratio test

UNIT IV

MATHEMATICAL MODELING OF EXPONENTIAL FUNCTIONS

Concept of exponential growth - Graphs of exponential functions - Relationship between the growth factor and exponential growth or decline - Exponential equations have a variable as an exponent and take the form y = abx through least square approximation - Calculus of exponential functions - Exponential series – Characteristics

9 Hours

9 Hours

9 Hours

9 Hours

3104

UNIT V

MATHEMATICAL MODELING OF MULTIVARIABLE FUNCTIONS

Graphing of functions of two variables - Partial derivatives - Total derivatives - Jacobians - Optimization of multivariable functions with constraints - Optimization of multivariable functions without constraints

Reference(s)

Total: 45+15=60 Hours

22PH102 ENGINEERING PHYSICS

Course Objectives

- Understand the concept and principle of energy possessed by mechanical system
- Exemplify the propagation and exchange of energy
- Identify the properties of materials based on the energy possession

Programme Outcomes (POs)

PO 1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO 9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes (COs)

- 1. Apply the work-energy theorem to analyze and optimize mechanical system performance
- 2. Analyze free and forced mechanical oscillations in vibrational energy systems
- 3. Analyze the propagation of energy in mechanical systems through transverse and longitudinal waves
- 4. Analyze the exchange of energy and work between the systems using thermodynamic principles
- 5. Apply the concept of energy and entropy to understand the mechanical properties of materials

Articulation Matrix

UNIT I

CONSERVATION OF ENERGY

Concept of energy - types of energy - conservation of energy Mechanical energy: - translation - rotation - vibration - Kineticand potential energies - conservation - work and energy - laws of motion - minimization of potential energy - equilibrium - dissipative systems - friction

UNIT II

VIBRATIONAL ENERGY

Periodic Motion - Simple Harmonic Motion - Energy of the SHM - Pendulum types - Damped oscillations - forcedoscillations - natural frequency - resonance

UNIT III

PROPAGATION OF ENERGY

Transfer of energy - material medium - Transverse wave - Longitudinal wave - standing wave - interference - Dopplereffect. Sound waves and its types - characteristics - human voicere - reflection - refraction - beats

6 Hours

5 Hours

6 Hours

22CH103 ENGINEERING CHEMISTRY I

Course Objectives

- Understand the origin of elements from the universe •
- Outline the properties of elements in the periodic table
- Analyse the different types of bond formed during chemical reactions and its reaction thermodynamics •
- Summarize different states of matter based on atomic arrangement

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

- 1. Understand nuclear transmutation reactions that lead to the formation of elements in the universe
- 2. Illustrate atomic structure of elements in the periodic table and interpret the periodic trends in properties of elements with its anomaly
- 3. Apply the conditions for the formation of different types of chemical bonds and predict the minimum energy required for a reaction to occur
- 4. Analyse endothermic and exothermic processes and exchange of energy during chemical reactions
- 5. Analyse whether the given matter is a solid, liquid, gas, or plasma and interpret the arrangement of atoms

5	2	1	-	-	-	-	-	-	-	-	-	-

UNIT I

ORIGIN OF ELEMENTS

Hydrogen - Elements and Sun - fusion - hypernova - supernova - dying stars - man-made elements

UNIT II

ATOMIC STRUCTURE AND PERIODICITY

Atomic Structure - Electronic configuration - Periodic Table - Periodic trends in properties of elements - Anomalous behaviour in periodicity

UNIT III

CHEMICAL BONDING

Octet rule & its limitations - types of chemical bonds - bond energy - bond cleavage - activation energy of reactions

UNIT IV

REACTION THERMODYNAMICS

Conservation of energy - Endothermic reactions & exothermic reactions - Exchange of energy involved in chemical reactions

UNIT V

STATES OF MATTER

Solid - liquid - gas - plasma - quantum dots - arrangement of atoms/ions/molecules in different phases

LABORATORY EXPERIMENTS

Lab safety rules and guidelines for students - OSHA Guidelines

4 Hours
EXPERIMENT 1 Evaluate the dissolved oxygen (DO) levels in effluent samples collected from sewage treatment plants in BIT. Ensure the suitability of outlet water for the growth of aquatic animals (fishes).
4 Hours
EXPERIMENT 2 Investigate the amount of Iron (Fe^{2+}) in a mild steel alloy sample using a spectrophotometer.
4 Hours
EXPERIMENT 3 Estimate the amount of chromium present in industry effluent samples and bottled beverages.
4 Hours
EXPERIMENT 4 Ensure the suitability of drinking water in the RO water supply in BIT based on the presence of chloride ions.
4 Hours
EXPERIMENT 5 Assess the acidic nature of effluent water from industries using the conductometric titration method.
4 Hours
EXPERIMENT 6 Measure the stain removal efficiency of the prepared soaps from stained clothes.
4 Hours
EXPERIMENT 7 Assess the purity of commercially available active pharmaceutical ingredients (aspirin) as per the government-prescribed standards. Total: 60 Hours

22GE001 FUNDAMENTALS OF COMPUTING

Course Objectives

- Understand the fundamental digital logics behind computations of computer systems.
- Develop simple assembly language programs with respect to arithmetic operations.
- Understand the program execution process and basics of software development methodologies.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO2 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes (COs)

- 1. Infer the hidden languages and inner structures of computer hardware and software through codes and combinations.
- 2. Interpret the organizational and architectural issues of a digital computer with concepts of various data transfertechniques in digital computers and the I/O interfaces.
- 3. Analyze programming problems and apply assembly instructions to solve simple problems.
- 4. Infer the fundamentals of operating system and System programs basics.
- 5. Apply the software development methodologies to various real life scenarios.

Articulation Matrix

5	2	2	2	1	-	-	-	-	-	-	-	-	-	-

UNIT I

CODES AND COMBINATIONS

Communication using Mores and Braille binary codes - Digitizing letters, numbers and objects using binary codes -Performing simple operations: addition through binary codes.

UNIT II

COMPUTATION USING COMPUTER

Communication to computing devices through various input sources - Computational operation - flow, functions and controls - communication to output devices - Basic communication protocol.

UNIT III

ASSEMBLY LANGUAGE PROGRAMMING

Little Man Computing (LMC) Model - Instruction Set - Labels - Calculation -Branching - Input - Output - Loops - Simpleprograms.

UNIT IV

OPERATING SYSTEM AND APPLICATION GENERATION

BIOS - Device Drivers - Resources - Scheduler - Applications Generation and Creation - Stages of Compilation - Linkers, Loaders and Libraries.

8 Hours

9 Hours

9 Hours

UNIT V

SOFTWARE DEVELOPMENT

Phases of application life cycle management - Software Development Methodologies - Web Page development.

22HS001 FOUNDATIONAL ENGLISH

Course Objectives

- Heighten awareness of grammar in oral and written expression
- Improve speaking potential in formal and informal contexts
- Improve reading fluency and increased vocabulary
- Prowess in interpreting complex texts
- Fluency and comprehensibility in self-expression
- Develop abilities as critical readers and writers
- Improve ability to summarize information from longer text, and distinguish between primary and supporting ideas

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

Course Outcomes (COs)

- 1. Express themselves in a professional manner using error-free language
- 2. Express in both descriptive and narrative formats
- 3. Interpret and make effective use of the English Language in Business contexts
- 4. Actively read and comprehend authentic text
- 5. Express opinions and communicate experiences.

5	-	-	-	-	-	-	-	-	2	3	-	1

UNIT I

SELF-EXPRESSION

Self-Introduction - Recreating Interview Scenarios (with a focus on verbal communication) - Subject Verb Concord - Tenses

Common Errors in verbal communication Be-verbs - Self-Introduction - Recreating interview scenarios - Haptics - Gestures - Proxemics - Facial expressions - Paralinguistics/Vocalics - Body Language - Appearance - Eye Contact - Artefacts Self- Introduction - Powerful openings and closings at the interview - Effective stock phrases - Modified for spontaneity and individuality-Question tags, framing questions including WH Questions - Prepositions - Listening to Ted talks- Listening for specific information.

1022

UNIT II

CREATIVE EXPRESSION

DescriptiveExpression-PictureDescriptionandBlogWriting- Vocabulary - Oneword substitution - Adjectives - Similes, Metaphors, Imagery & Idioms - Link words - Inclusivelanguage.Narrative Expression - Travelogue and Minutes of Meeting -Verbal analogy -Sequence & Time order words - Jumbledparagraph,sentences, Sequencing - Text & Paragraph completion - Past tense - Using quotation marks

UNIT III

FORMAL EXPRESSION

Formal Letters and Emails - Writing: E-mails and Letters of apology, Requisition and Explanation, and Letters to Newspapers - Speaking: Tendering verbal apologies, and explanations, persuading a listener/ audience-Hierarchy in Business correspondence-Subject of a mail, Header, Body (Salutation) and Footer of a mail.Conjunctional clause Punctuation - Formal Idioms - Phrases - Articles - Definite & Indefinite - Types of sentences - Modal verbs Precision in comprehension, Summary writing, Selective summary - Reading: Active reading - short paragraphs, excerpts, articles and editorials –Skimming and Scanning Reading comprehension & analysis -Tenses,QP/PQ approach. Identifying the central themes/ crux-Interpreting tone - formal/informal/semi-formal - Note - taking - Listening: Listening for data, for specific information, for opinion -Active and passive Listening - Transcription - Paraphrasing and summarising information-Agreeing & disagreeing - Note - taking - Writing: Summary writing, selective summary, paraphrasing, note - making, opinion pieces –Finding synonyms in the context Paraphrasing - Sentence Transformation - simple, compound, complex. Sentence substitution - Sentence completion - Interpreting paragraphs

22GE003 BASICS OF ELECTRICAL ENGINEERING

Course Objectives

- To understand the basic concepts of electrical charge and its properties
- To interpret the formation of electric field due to electric charges
- To illustrate the concept of magnetic fields due to revolving electron
- To illustrate the force on moving charges in electric and magnetic field
- To understand the energy transfer in electro mechanical conversion

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to thesolution of complex engineering problems.

PO2.Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Course Outcomes (COs)

- 1. Interpret the behavior of electric charges in different medium using coulombs law.
- 2. Analyse the electric field due to different charge distributions.
- 3. Analyse the magnetic field intensity due to long conductor, solenoid, toroid and magnetic dipoles.
- 4. Analyze the force on conductors due to the moving charges.
- 5. Interpret the energy conversion concepts in electromagnetic fields.

Articulation Matrix

4	1	2	-	-	-	-	-	-	-	-	-	-
5	1	2	-	1	-	-	-	-	-	-	-	-

UNIT I

ELECTRIC CHARGE

Properties of charge, additivity of charges, quantization of charge, conservation of charge, Forces between multiple charges, Electric charge in conductors, Drift of Electrons, Charges in Clouds.

UNIT II

ELECTRIC FIELD

Electric field due to system of charges, Significance of Electric field line. Electric Dipole and its significance, Continuous charge distribution, Field in infinite long uniform straight conductors, field in uniform charged uniform infinite plane sheet, field due to uniform thin spherical sheet.

UNIT III

MAGNETIC FIELDS

Concept of magnetic field, magnetic fields in infinitely long straight wire, straight and toroidal solenoids, Magnetic dipole moment of a revolving electron, Magnetic field intensity due to a magnetic dipole (bar magnet) along its axis and perpendicular to axis, Induced Electric field due to changing Magnetic Field.

UNIT IV

FORCE ON CHARGES

Force on a moving charge in uniform magnetic and electric fields, Force on a current carrying conductor in a uniform magnetic field, Force between two parallel current carrying conductors.

7 Hours

5 Hours

7 Hours

12

UNIT V

ELECTRO MECHANICAL ENERGY CONVERSION

Energy transfer in electromagnetic fields, Energy storage in magnetic field, Electromagnetic induction, induced emf, Eddy currents. Self and mutual inductance Linear Momentum and Angular Momentum carried by Electromagnetic Fields.

EXPERIMENT 1

Analyze and design of Electromechanical energy conversion system.

EXPERIMENT 2

Develop an electrical machine and analyze its performance with supplied input of AC from 0 V to 230 V.

22GE005 ENGINEERING DRAWING

Course Objectives

- To provide knowledge on fundamentals of engineering drawings and conic sections.
- To impart skill on orthographic projections of points and lines.
- To familiarize on projection of planes and simple solids.
- To provide knowledge on section of solids and development of surfaces of simple solids.
- To impart skill on conversion of isometric view to orthographic projection and vice versa.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PSO 2. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes (COs)

- 1. Understand the engineering drawing concepts as per industrial standards.
- 2. Construct orthographic projections of points and lines.
- 3. Draw the projection of planes and simple solids.
- 4. Draw the section of solids and development of surfaces.
- 5. Draw the orthographic projection from isometric view and vice versa.

Articulation Matrix

UNIT I

FUNDAMENTALS OF ENGINEERING DRAWING

Definition - standards - drawing tools - drawing sheets - scales - line and its types. Practices on lettering - numbering -dimension of drawings. Construction of conic sections - ellipse - parabola and hyperbola using eccentricity method.

UNIT II

PROJECTION OF POINTS AND LINES

Principles of projection - projection of points in four quadrants - first angle projection of straight lines - perpendicular to one plane - parallel and inclined to both planes.

UNIT III

PROJECTION OF PLANES AND SOLIDS

Projection of simple planesand projection f simple solids - parallel - perpendicular and inclined to one plane using change of position method - inclined to both the planes

7 Hours

1022

9 Hours

UNIT IV

SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES

Section of Solids - simple position with cutting plane parallel - perpendicular and inclined to one plane with true shape of section. Development of surfaces - simple and truncated solids.

UNIT V

ORTHOGRAPHIC PROJECTIONS AND ISOMETRIC VIEW

Orthographic projections and isometric view of components used in engineering applications.

22HS003 HERITAGE OF TAMILS

Course Objectives

- Describe the linguistic diversity in India, highlighting Dravidian languages and their features
- Summarize the evolution of art, highlighting key transitions from rock art to modern sculptures .
- Examine the role of sports and games in promoting cultural values and community bonding •
- Discuss the education and literacy systems during the Sangam Age and their impact.
- Outline the importance of inscriptions, manuscripts, and the print history of Tamil books in preserving knowledgeand culture •

Programme Outcomes (POs)

PO 9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10 Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Understand the concept of language families in India, with a focus on Dravidian languages.
- 2. Trace the evolution of art from ancient rock art to modern sculptures in Tamil heritage.
- 3. Identify and differentiate various forms of folk and martial arts in Tamil heritage.
- 4. Understand the concepts of Flora and Fauna in Tamil culture and literature.
- 5. Evaluate the contributions of Tamils to the Indian Freedom Struggle.

4	-	-	-	-	-	-	-	-	2	3	-	-
5	-	-	-	-	-	-	-	-	2	3	-	-

UNIT I

LANGUAGE AND LITERATURE

Language Families in India - Dravidian Languages - Tamil as aClassical Language- Classical Literature in Tamil- Secular Nature of Sangam Literature- Distributive Justice in Sangam Literature - Management Principles in Thirukural - Tamil Epics and Impact of Buddhism & Jainism in Tamil Land - Bakthi Literature Azhwars and Nayanmars - Forms of minor Poetry - Development of Modern literature in Tamil - Contribution of Bharathiyar and Bharathidhasan.

UNIT II

HERITAGE - ROCK ART PAINTINGS TO MODERN ART-SCULPTURE

Hero stone to modern sculpture - Bronze icons - Tribes and their handicrafts- Art of temple car making - Massive Terracottasculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments - Mridhangam, Parai, Veenai, Yazh and Nadhaswaram - Role of Temples in Social and Economic Life of Tamils.

UNIT III

FOLK AND MARTIAL ARTS

Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leatherpuppetry, Silambattam, Valari, Tiger dance - Sports and Games of Tamils.

UNIT IV

THINAI CONCEPT OF TAMILS

Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature - Aram Concept of Tamils -

3 Hours

1001

3 Hours

3 Hours

Education and Literacy during Sangam Age - Ancient Cities and Ports of Sangam Age - Export and Import during Sangam Age - Overseas Conquest of Cholas.

UNIT V

CONTRIBUTION OF TAMILS TO INDIAN NATIONAL MOVEMENT AND INDIAN CULTURE

Contribution of Tamils to Indian Freedom Struggle - The Cultural Influence of Tamils over the other parts of India - Self- Respect Movement - Role of Siddha Medicine in Indigenous Systems of Medicine - Inscriptions & Manuscripts - Print History of Tamil Books.

தமிழர் மரபு

பாடத்திட்டத்தின் நோக்கம்

- இந்திய மொழிக்குடும்பத்துள் திராவிட மொழிகள் தனித்து இயங்கும் தன்மையை அதன் சிறப்புகள் வழி அறிதல்.
- தொன்றுதொட்டு தமிழர், கலையில் அடைந்த வளர்ச்சியை இயம்புதல்.
- சங்ககால தமிழரின் கற்றல் திறத்தை இலக்கியங்கள் வழி ஆராய்தல்.

கற்றலின் விளைவு

- இந்திய மொழிக்குடும்பத்துள் திராவிட மொழிகள் தனித்து இயங்கும் தன்மையை அதன் சிறப்புகள் வழி அறிதல்.
- தொன்றுதொட்டு தமிழர், கலையில் அடைந்த வளர்ச்சியை இயம்புதல்.
- சங்ககால தமிழரின் கற்றல் திறத்தை இலக்கியங்கள் வழி ஆராய்தல்.
- தமிழ் மொழியின் சிறப்புகளை அதன் படைப்பிலக்கியங்கள் மூலம் அறிந்து கொள்ளுதல்.
- கற்காலம் தொடங்கி, இக்காலம் வரை சிற்பக்கலை அடைந்த வளர்ச்சியை கண்டுகொள்ளல்.
- தமிழர் தம் வாழ்வில் எங்கனம் இயற்கையை வணங்கி போற்றினர் என்பதை திணை கோட்பாட்டின் வழி தெளிதல்.
- இந்திய விடுதலை போரில் தமிழர் ஆற்றிய பங்கினை தெரிந்து கொள்ளுதல்.

அலகு I மொழி மற்றும் இலக்கியம்:

3

இந்திய மொழிக் குடும்பங்கள் – திராவிட மொழிகள் – தமிழ் ஒரு செம்மொழி – தமிழ் செவ்விலக்கியங்கள் - சங்க இலக்கியத்தின் சமயச் சார்பற்ற தன்மை – சங்க இலக்கியத்தில் பகிர்தல் அறம் – திருக்குறளில் மேலாண்மைக் கருத்துக்கள் – தமிழ்க் காப்பியங்கள், தமிழகத்தில் சமண பௌத்த சமயங்களின் தாக்கம் - பக்தி இலக்கியம், ஆழ்வார்கள் மற்றும் நாயன்மார்கள் – சிற்றிலக்கியங்கள் – தமிழில் நவீன இலக்கியத்தின் வளர்ச்சி – தமிழ் இலக்கிய வளர்ச்சியில் பாரதியார் மற்றும் பாரதிதாசன் ஆகியோரின் பங்களிப்பு.

அலகு II மரபு – பாறை ஒவியங்கள் முதல் நவீன ஒவியங்கள் வரை – சிற்பக் கலை:

நடுகல் முதல் நவீன சிற்பங்கள் வரை – ஐம்பொன் சிலைகள்– பழங்குடியினர் மற்றும் அவர்கள் தயாரிக்கும் கைவினைப் பொருட்கள், பொம்மைகள் – தேர் செய்யும் கலை – சுடுமண் சிற்பங்கள் – நாட்டுப்புறத் தெய்வங்கள் – குமரிமுனையில் திருவள்ளுவர் சிலை – இசைக் கருவிகள் – மிருதங்கம், பறை, வீணை, யாழ், நாதஸ்வரம் – தமிழர்களின் சமூக பொருளாதார வாழ்வில் கோவில்களின் பங்கு.

அலகு III நாட்டுப்புறக் கலைகள் மற்றும் வீர விளையாட்டுகள்:

தெருக்கூத்து, கரகாட்டம், வில்லுப்பாட்டு, கணியான் கூத்து, ஒயிலாட்டம், தோல்பாவைக் கூத்து, சிலம்பாட்டம், வளரி, புலியாட்டம், தமிழர்களின் விளையாட்டுகள்.

அலகு IV தமிழர்களின் திணைக் கோட்பாடுகள்:

தமிழகத்தின் தாவரங்களும், விலங்குகளும் – தொல்காப்பியம் மற்றும் சங்க இலக்கியத்தில் அகம் மற்றும் புறக் கோட்பாடுகள் – தமிழர்கள் போற்றிய அறக்கோட்பாடு – சங்ககாலத்தில் தமிழகத்தில் எழுத்தறிவும், கல்வியும் – சங்ககால நகரங்களும் துறை முகங்களும் – சங்ககாலத்தில் ஏற்றுமதி மற்றும் இறக்குமதி – கடல்கடந்த நாடுகளில் சோழர்களின் வெற்றி.

அலகு V இந்திய தேசிய இயக்கம் மற்றும் இந்திய பண்பாட்டிற்குத் தமிழர்களின் பங்களிப்பு:

.

இந்திய விடுதலைப்போரில் தமிழர்களின் பங்கு – இந்தியாவின் பிறப்பகுதிகளில் தமிழ்ப் பண்பாட்டின் தாக்கம் – சுயமரியாதை இயக்கம் – இந்திய மருத்துவத்தில், சித்த மருத்துவத்தின் பங்கு – கல்வெட்டுகள், கையெழுத்துப்படிகள் - தமிழ்ப் புத்தகங்களின் அச்சு வரலாறு.

TOTAL : 15 PERIODS

TEXT-CUM-REFERENCE BOOKS

- தமிழக 'வரலாறு மக்களும் பண்பாடும் கே.கே. பிள்ளை (வெளியீடு: தமிழ்நாடு பாடநால் மற்றும் கல்வியியல் பணிகள் கழகம்).
- கணினித் தமிழ் முனைவர் இல. சுந்தரம். (விகடன் பிரசுரம்).
- கீழடி வைகை நடுக்கரையில் சங்ககால நகர நாகரிகம் (தொல்லியல் துறை வெளியீடு)
- பொருநை ஆற்றங்கரை நாகரிகம். (தொல்லியல் துறை வெளியீடு)
- 5. Social Life of Tamils (Dr.K.K.Pillay) A joint publication of TNTB & ESC and RMRL (in print)
- Social Life of the Tamils The Classical Period (Dr.S.Singaravelu) (Published by: International Institute of Tamil Studies.
- Historical Heritage of the Tamils (Dr.S.V.Subatamanian, Dr.K.D. Thirunavukkarasu) (Published by: International Institute of Tamil Studies).
- The Contributions of the Tamils to Indian Culture (Dr.M.Valarmathi) (Published by: International Institute of Tamil Studies.)

- Studies in the History of India with Special Reference to Tamil Nadu (Dr.K.K.Pillay) (Publishedby: The Author)
- Porunai Civilization (Jointly Published by: Department of Archaeology & Tamil Nadu Text Bookand Educational Services Corporation, Tamil Nadu)
- Journey of Civilization Indus to Vaigai (R.Balakrishnan) (Published by: RMRL) Reference Book.

22MA201 ENGINEERING MATHEMATICS II

Course Objectives

- To impart and analyze the concepts of differential equations to describe in real-world phenomena
- To provide basic understanding on differential equation models and vector field models
- Summarize and apply the methodologies involved in framing the real world problems related to fundamentalprinciples of complex functions

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

- 1. Interpret the concept of differential equations through mathematical modeling and analyze its applications inengineering
- 2. Formulate the real world problems as second order linear differential equations and give solutions for the same
- 3. Demonstrate the real-world phenomena with magnitude and direction in the form of vector functions
- 4. Apply the concept of vector fields and line integrals through mathematical modeling in engineering
- 5. Determine complex functions and apply them to formulate problems arising in engineering

Articulation Matrix

4	2	1	-	-	-	-	-	-	-	-	-	-
5	1	2	-	-	-	-	-	-	-	-	-	-

UNIT I

FIRST ORDER LINEAR DIFFERENTIAL EQUATIONS

Formation of differential equations- Solutions of first order linear ODE: Leibnitzs and method of separation of variables - Cooling/Heating of an object - A falling object - Modeling of electric circuits: RL and RC circuits - Modeling of population dynamics: Exponential growth and decay - Logistic growth model

UNIT II

SECOND ORDER LINEAR DIFFERENTIAL EQUATIONS

Methods of solving second order linear ordinary differential equations - Models for linear oscillators: Simple harmonicmotion - Mechanical vibrations with and without damping - Electric circuit system: RLC circuits

UNIT III

VECTOR DIFFERENTIAL CALCULUS

Vector and scalar functions - Fields - Derivative of a vector function and geometrical interpretation - Velocity and acceleration - Gradient and its properties - Tangent and normal vectors - Directional derivative - Divergence of a vector field - Curl of a vector field - Projectile motion

9 Hours

20

UNIT IV

VECTOR INTEGRAL CALCULUS

Line integrals of vector point functions - Surface integral of vector point functions - Applications of line and surfaceintegrals -

UNIT V

COMPLEX FUNCTIONS

Basic concepts of Complex numbers Geometrical representation of complex number - Analytic functions and its properties - Construction of Analytic functions: Fluid flow Electric flow - Mapping of complex functions

22PH202 ELECTROMAGNETISM AND MODERN PHYSICS

Course Objectives

- Understand the principles and mechanisms of electricity and magnetism
- Infer the classification of electromagnetic waves
- Analyze the theory of relativity and energy bands

Programme Outcomes (POs)

PO 1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO 9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes (COs)

- 1. Analyze the mechanisms of Coulomb's law and electric potential in various charge system
- 2. Analyze the magnetic properties of materials and their effects on external magnetic fields
- 3. Analyze the classification of electromagnetic waves based on frequency and wavelength
- 4. Outline the importance of theory of relativity and analyze the wave nature of particles
- 5. Apply the principles of electron and hole transport to study p-type and n-type semiconductors.

22CH203 ENGINEERING CHEMISTRY II

Course Objectives

- Understand the concept of electrochemistry for determination of electrode potential, pH and applications as energy storage devices
- Outline the chemistry of metal corrosion and analyze the methods of corrosion control
- Understand the role of catalyst in the rate of reaction
- Summarize the variation in properties and reactivity of isotopes.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Course Outcomes (COs)

- 1. Apply the electrochemical concepts to determine the electrode potential of a metal
- 2. Analyze the working of batteries for the energy storage devices
- 3. Analyze the specific operating conditions under which corrosion occurs and suggest a method to control corrosion
- 4. Analyze the reaction mechanisms and assess the role of catalyst in a chemical reaction
- 5. Analyze various types of nuclear transmutation including decay reactions

22GE002 COMPUTATIONAL PROBLEM SOLVING

Course Objectives

- Analyze the algorithm design techniques and development principles in solving the real life problems.
- Illustrate the different ways of organizing and storing the data in computing systems.
- Understand the basic network configuration and setup connections among different device systems.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Course Outcomes (COs)

- 1. Analyze a problem and formulate algorithms, pseudocodes and flowcharts.
- 2. Develop algorithmic solutions to simple computational problems and explore algorithmic approaches to problemsolving.
- 3. Design and apply appropriate data structures for solving computing problems.
- 4. Compare the various storage devices used in a computer system.
- 5. Analyze the requirements for a given organizational structure and establish the connection between two or more computers to form a network.

Articulation Matrix

22GE004 BASICS OF ELECTRONICS ENGINEERING

Course Objectives

- To Understand the concept of energy transmission through mechanical, electrical and electromagnetic form.
- To Analyze the use of PN Junction Diode and BJT for signal conditioning. •
- To apply the working principle of PN Junction Diode and BJT for the design of basic Digital Logic. •
- To analyze the working and characteristics of Special Purpose Semiconductor Electronic Devices. •

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PSO2 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes (COs)

- 1. Understand the need for electrical and electromagnetic signal transmission.
- 2. Analyze the working principle and characteristics of PN junction diode.
- 3. Analyze the working principle and characteristics of Bipolar Junction Transistor.
- 4. Apply the working principle of PN Junction diode and BJT for designing basic Digital Logic functions.
- 5. Analyze the energy conversion needs and working principle of Special purpose electronic devices.

5	1	1	-	-	-	-	-	-	-	-	-	-

UNIT I

ENERGY TRANSFER AND SIGNALS

Energy Transmission through Mechanical, Electrical and Electromagnetic means, Signal as Energy Transmission, Complexity in signal transmission (Volume of Information, Distance and Time taken), Limitations of Mechanical Energy Transmission, Electrical and Electromagnetic Signal Transmission, Need for Conversion between Electrical and Mechanical Signals.

UNIT II

SIGNAL CONDITIONING USING DIODE

Need for Vacuum Tubes in the Evolution of Electronics, Overview of Vacuum Tubes, Diode and Triode, Limitations of Vacuum Tubes. Semiconductor Group in Periodic Table, Overview of Semiconductor Materials, Flow of electrical energythrough PN Junction Diode, Signal Clipping, Signal Clamping and Signal Multiplication using PN Junction Diode, Limitations of PN Junction Diode.

UNIT III

SIGNAL CONDITIONING USING TRANSISTOR

Need for controlling electrical signals, Principle of Bipolar Junction Transistor operation, Signal Switching and Amplification using BJT, Limitations of BJT, Principle of Field Effect Transistor operation.

6 Hours

27

6 Hours

B.E.- CE | Minimum Credits to be earned : 164 | Regulations 2022

Overview of Logic Gates, PN Junction and BJT as electronic switches, Digital Logic Synthesis using Diode and Transistor: Diode Logic, Resistor Transistor Logic, Diode Transistor Logic, Transistor Logic.

UNIT V

UNIT IV

DEVICES FOR SPECIAL REQUIREMENTS

LOGIC SYNTHESIS USING DIODE AND TRANSISTORS

Voltage Regulation using Zener Diode, Variable Capacitance using Varactor Diode, Electrical Energy to Light Energyconversion using Light Emitting Diode, Light to Energy to Electrical Energy conversion using Solar Cell.

EXPERIMENT 1 Design and Implement a simple device to communicate basic information between two different small distance pointsusing wired and wireless methods.

EXPERIMENT 2 Design and Implement different wave shaping Circuits using PN Junction Diodes.

EXPERIMENT 3		
Design and Implement	Voltage Multiplier	Circuit using PN Junction Diodes and Capacitors.

EXPERIMENT 4

Design and Implement t a three Stage Circuit to convert 220V 50Hz AC mains supply to 12V DC supply.

	4 Hours
EXPERIMENT 5	
Design and Implement a BJT Amplifier Circuit to amplify audio input signal.	
EVDEDIMENT &	4 Hours

Design and Implement Basic Logic Gates using PN Junction Diodes.

EXPERIMENT 7

Design and Implement Basic Logic Gates using BJTs.

22HS002 STARTUP MANAGEMENT

Course Objectives

- Promote entrepreneurial spirit and motivate to build startups
- Provide insights on markets and the dynamics of buyer behaviour
- Train to develop prototypes and refine them to a viable market offering •
- Support in developing marketing strategies and financial outlay .
- Enable to scale up the porotypes to commercial market offering

Programme Outcomes (POs)

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8 Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10 Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11 Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Course Outcomes (COs)

- 1. Generate valid and feasible business ideas
- 2. Create Business Model Canvas and formulate positioning statement
- 3. Invent prototypes that fulfills an unmet market need
- 4. Formulate business strategies and create pitch decks
- 5. Choose appropriate strategies for commercialization

UNIT I

BUSINESS MODELS AND IDEATION

Startups: Introduction, Types of Business Modes for Startups. Ideation: Sources of Ideas, Assessing Ideas, Validating Ideas, Tools for validating ideas, Role of Innovation and Design Thinking

UNIT II

UNDERSTANDING CUSTOMERS

Buyer Decision Process, Buyer Behaviour, Building Buyer Personas, Segmenting, Targeting and Positioning, ValueProposition (Business Model Canvas), Information Sourcing on Markets, Customer Validation

UNIT III

DEVELOPING PROTOTYPES

Prototyping: Methods - Paper and Digital, Customer Involvement in Prototyping, Product Design Sprints, RefiningPrototypes

UNIT IV

BUSINESS STRATEGIES AND PITCHING

3 Hours

1022

3 Hours

3 Hours

Design of Marketing Strategies and Campaigns, Go-To-Market Strategy, Financial KPIs Financial Planning and Budgeting, Assessing Funding Alternatives, Pitching, Preparing Pitch Decks **3 Hours**

UNIT V

COMMERCIALIZATION

Implementation: Prototype to Commercialization, Test Markets, Institutional Support, Registration Process, IP Laws and Protection, Legal Requirements, Type of Ownership, Building and Managing Teams, Defining role of investors

EXPERIMENT 1 Analysis of various business sectors	1 Hours
EXPERIMENT 2 Developing a Design Thinking Output Chart	2 Hours
EXPERIMENT 3 Creating Buyer Personas	1 Hours
EXPERIMENT 4 Undertake Market Study to understand market needs and assess market potential	3 Hours
EXPERIMENT 5 Preparation of Business Model Canvas	2 Hours
EXPERIMENT 6 Developing Prototypes	15 Hours
EXPERIMENT 7 Organizing Product Design Sprints	2 Hours
EXPERIMENT 8 Preparation of Business Plans	2 Hours
EXPERIMENT 9 Preparation of Pitch Decks	2 Hours

Total: 15+30=45 Hours

22HS006 TAMILS AND TECHNOLOGY 1001

Course Objectives

- Analyse graffiti on potteries as a form of historical and cultural documentation during the Sangam Age.
- Investigate the building materials and the historical context of Hero stones during the Sangam Age by Analysing the details of stage constructions in Silappathikaram and their cultural significance.
- Examine ancient knowledge of oceans and its impact on Tamil society.

Programme Outcomes (POs)

PO9. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Understand the significance of the weaving industry during the Sangam Age and its cultural importance.
- 2. Understand the significance of dams, tanks, ponds, and sluices in the agricultural and irrigation practices of the Chola Period.
- 3. Explore the architectural designs and structural construction methods used in household materials during the Sangam Age.
- 4. Explore the art of shipbuilding in ancient Tamil culture and its role in maritime trade and transportation.
- 5. Trace the development of scientific terminology and vocabulary in Tamil language.

3 Hours

22HS009 COCURRICULAR / EXTRACURRICULAR ACTIVITY

Course Objectives

- To develop Interpersonal and Leadership Skills
- To Foster Personal Growth and Time Management
- To enhance Community Engagement and Social Responsibility

Program Outcomes

PO8.Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice

PO9. Individual and Team Work: Function effectively as an individual, and as a member or leader indiverse teams, and in multidisciplinary settings.

PO10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12. Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1: Apply suitable algorithmic thinking and data management practices to design, develop, and evaluate effective solutions for real-life and research problems.

Course Outcomes:

1. Build leadership skills and teamwork capabilities by engaging in group activities through organization and participation of events

2. Demonstrate the technical, creative, and interpersonal skills through active participation in technical events.

3. Exhibit balanced academics with diverse cultural, sports, and literary activities, showcasing improved time management and organizational skills.

4. Enhance the social responsibility and community engagement by participating in outreach and extension activities.

5. Gain practical experience and industry insights through field visits, industrial training, and internships.

Articulation Matrix

Every student shall be required to undergo a minimum of 40 hours of Co-curricular / Extracurricular activities organized through society chapters, technical and non-technical Club activities during the II semester, failing which he/she shall not be permitted to appear for the VIII Semester examination. Such students are permitted to appear for the SemesterEnd examinations only after completing the requirements. The attendance of the courses / events shall be maintained on the regular basis by the concerned Co-coordinators and made available in the Office of the Controller of Examinations before the commencement of Semester end examinations of Semester II.

The following co-curricular and extra-curricular activities are conducted on a regular basis and is compulsory for all students. The students' performances are assessed on the basis of their participation and organization of events in voluntary services, performance in technical and nontechnical events, games and sports, performance in literary activities, performance in cultural activities and their participation in District/Regional/State/National and International level events.

Co-Curricular activity

Technical events organized through departments, Special labs, Clubs, Society and Chapters etc. includes but not limited to Workshop, Seminar, Conference, Symposium Technical Contest Competition, Field visit, Industrial Training, and Internships.

Extracurricular activity

Non-Technical Events Organized through departments, Special labs, Clubs, Society and Chapters etc. includes but not limited to NSS Camp, NCC Camp, YRC activity, Yoga, Sports and games, Cultural events, Outreach activity and Extension activity.

22CE301 NUMERICAL METHODS AND STATISTICS

Course Objectives

- Understand the methods to solve polynomial equations and Implement the ideas of numerical interpolation
- Develop enough confidence to solve differential equations numerically
- Summarize and apply the concepts of statistics in solving engineering problems

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching

substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

- 1. Apply the basic concepts of solving equations and able to identify the derivative and integration of functions
- 2. Execute the knowledge of solving various types of ordinary and partial differential equations, numerically
- 3. Comprehend the ideas of basics statistics in engineering
- 4. Apply the knowledge of testing of hypothesis for small and large samples in engineering problems
- 5. Analyze the knowledge of design of experiments and control charts in the field of Engineering

5	2	3	-	-	-	-	-	-	-	-	-	-	-	-

UNIT I

NUMERICAL TECHNIQUES FOR SOLVING EQUATIONS, DIFFERENTIATION AND INTEGRATION

Solution of algebraic and transcendental equations - Newton Raphson method - Solution of linear system of equations - Gauss elimination method - Jacobis method for inverse matrices- Eigenvalues of a matrix by Power method -Interpolation

- Lagranges interpolation - Approximation of derivatives using interpolation polynomials- Numerical integration using Simpsons rule

UNIT II

SOLUTION OF ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS

Solution of ordinary differential equation: Fourth order Runge - Kutta method for solving first order equations - Solution of twodimensional heat equation: Laplaces and Poissons equations- One dimensional heat flow equation- Solution of One dimensional wave equation

UNIT III

BASIC STATISTICS

Mean-Median-Mode-Variance and Standard deviation -Covariance - Correlation and Regression

UNIT IV

TESTING OF HYPOTHESIS

Sampling distributions-Estimation of parameters- Statistical hypothesis-large sample tests based on Normal distribution forsingle mean and difference of means-Tests based on t, Chi-square and F distributions-Chi -square distributions (test for independent and Goodness of fit)

UNIT V

DESIGN OF EXPERIMENTS AND CONTROL CHARTS

One way and two-way classifications-Completely randomized 2 design-Randomized block design-Latin square design- 2X2 factorial design-Control Charts of Variable and Attributes

22CE302 CONSTRUCTION MATERIALS, EQUIPMENT AND TECHNIQUES

Course Objectives

- To equip the students to have a clear understanding of building materials and their properties.
- To introduce students to new topics such as Expansion joints.
- To introduce students to new topics such as waterproof materials.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specifiedneeds with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO11 Demonstrate knowledge and understanding of the engineering and management principles and apply these to ones own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze advanced construction practices and service systems to optimize efficiency, safety, and sustainability.
- 2. Investigate innovative material technologies and equipment advancements to optimize construction efficiency and durability.
- 3. Evaluate advanced underground construction techniques to enhance structural stability and efficiency.
- 4. Examine advanced erection techniques to ensure structural integrity and construction efficiency.
- 5. Evaluate the selection and application of equipments to optimize construction efficiency and project performance.

UNIT I

CONSTRUCTION PRACTICES AND SERVICE

Sequence of activities and construction co-ordination, marking, excavation - Types of Foundations - Shallow and Deep Foundations - Brick Masonry - Plastering and Pointing - Cavity Walls - Diaphragm Walls - Formwork - Centering and Shuttering - Shoring - Scaffolding -Underpinning - Roofing - Flooring –Joints in concrete - Contraction/Construction/Expansion joints - Fire Protection - Thermal Insulation - Ventilation and Air conditioning - Acoustics and Sound Insulation - Damp Proofing.

UNIT II

MODERN MATERIALS

Glass - Ceramics Sealants for joints Fiber glass reinforced plastic Clay products Refractories Composite materials Geopolymer based material Types Applications of laminar composites Fiber Textiles - Geomembranes and Geotextilesfor earth reinforcement.

6 Hours

6 Hours

UNIT III

SUB STRUCTURE CONSTRUCTION

Techniques of Box jacking - Pipe Jacking - Under water construction of diaphragm walls and Basement - Tunneling techniques - Piling techniques - Well and caisson - Sinking cofferdam - cable anchoring and grouting - Driving diaphragm walls, sheet piles - Shoring for deep cutting - Well points Dewatering and stand by Plant equipment for underground open excavation.

UNIT IV

SUPERSTRUCTURE CONSTRUCTION

Launching girders, bridge decks, offshore platforms - Special forms for shells - Techniques for heavy decks - In-situ prestressing in high rise structures - Erecting light weight components on tall structures Support structure for heavy Equipment and conveyors -Erection of articulated structures, braced domes, and space decks.

UNIT V

CONSTRUCTION EQUIPMENT

Selection of equipment for earth work - Earth moving operations - Types of earthwork equipment: tractors, motor graders, scrapers, front end waders, earth movers - Equipment for foundation and pile driving. Equipment for compaction, batching and mixing and concreting - Equipment for material handling and erection of structures - Equipment for dredging, trenching, tunnelling.

EXPERIMENT 1

Determination of water a	bsorption for Brick.
--------------------------	----------------------

EXPERIMENT 2

Determination of Water absorption for aggregate.	

EXPERIMENT 3

Determination of physical properties of Lightweight materials	
EXPERIMENT 4 Determination of Abrasion test on aggregate	4 Hours
EXPERIMENT 5 Determination Crushing test on aggregates	4 Hours
EXPERIMENT 6 Determination of strength test on Tiles	4 Hours
EXPERIMENT 7	4 Hours

Determination of strength test on Fiber reinforced concrete

22CE303 SURVEY AND GEOMATICS

Course Objectives

- To introduce the rudiments of plane surveying and geodetic principles to Civil Engineers.
- To learn the various methods of plane and geodetic surveying to solve the real-world Civil Engineering problems.
- To introduce the concepts of Control Surveying and Astronomical surveying.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization tothesolution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretationofdata, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including predictionand modelling to complex engineering activities with an understanding of the limitations.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning inthebroadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of CivilEngineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Compute the length, bearing and levelling of the given point using various basic surveying instruments.
- 2. Evaluate horizontal and vertical control methods to enhance surveying accuracy and reliability.
- 3. Construct the control points and carry-out the appropriate error corrections for the survey data points.
- 4. Examine hydrographic surveying technique to ensure precision in engineering project surveys.
- 5. Assess advanced surveying techniques to ensure accurate terrain mapping and site analysis

Articulation Matrix

5	2	-	-	-	-	-	-	-	-	-	-	-	2	1

UNIT I

FUNDAMENTALS OF CONVENTIONAL SURVEYING AND LEVELING

Classifications and basic principles of surveying - Equipment and accessories for ranging and chaining - Methods of ranging. Compass - Types of Compass - Basic Principles- Bearing - Types - True Bearing - Magnetic Bearing. Levelling - Principles and theory of Levelling - Benchmarks - Temporary Datum - Reduction - Sources of errors in Levelling and Permanent Adjustments-Methods of Levelling-Booking - Curvature and refraction.

UNIT II

THEODOLITE AND TACHEOMETRIC SURVEYING

Horizontal and vertical angle measurements - Temporary and permanent adjustments - Heights and distances

- Tacheometry surveying. Contour - Contouring - Characteristics of contours - Methods of contouring - Tacheometric contouring - Contour gradient - Uses of contour plan and map.

9 Hours

9 Hours

UNIT III

CONTROL SURVEYING AND ADJUSTMENT

Horizontal and vertical control Methods Specifications Triangulation Baseline Satellite stations Reduction to centre Trigonometrical levelling - Single and reciprocal observations, Traversing - Gales table. Errors Sources precautions and corrections - Classification of errors True and most probable values Weighted observations Principle of least squares Normal equation

UNIT IV

UNIT V

HYDROGRAPHIC SURVEY AND CIRCULAR CURVES

Hydrographic Surveying - Tides - MSL - Sounding methods - Engineering project surveys- requirements and specifications, various stages of survey work - Curves: Types - Horizontal curve: Elements of simple circular curve - Setting out simple circular curves by offset.

GEOMATICS Total Station: Advantages - Parts and accessories - working principle - Setup - Orientation - Field procedure - Errors and Good practices in using Total Station. GPS Surveying: Different segments - space, control and user - Orbit determination and representation segments satellite configuration - signal structure - Anti Spoofing and Selective Availability - Task of control segment - Hand Held and Geodetic receivers - data processing. **EXPERIMENT 1 5** Hours Preparation of topographic map using chain and compass of football field, BIT. **EXPERIMENT 2 5 Hours** Preparation of topographic map using chain and compass of pongal field, BIT. **EXPERIMENT 3 5** Hours Contour map generation using chain, compass and dumpy level of Agri Research field in front of AS block, BIT. **EXPERIMENT 4 5** Hours Contour map generation using chain, compass and dumpy level of pongal field, BIT. **EXPERIMENT 5** 4 Hours Establishing the Ground Control Points (GCP) through GALE's table using theodolite, chain and compass. **EXPERIMENT 6** 4 Hours Topographic and stakeout survey using total station of football field, BIT. **EXPERIMENT 7** 2 hours Topographic and stakeout survey using total station of pongal field, BIT **Total: 75 Hours Reference**(s)

22CE304 FLUID MECHANICS AND MACHINERY

Course Objectives

- To impart knowledge on the fluid properties and fluid statics principles
- To introduce the basic concept of fluid kinematics and dynamics •
- To calculate the rate of flow and energy losses in flow through pipes and open channels •
- To emphasize the concepts of boundary layer theory and the importance of dimensional analysis •
- To impart the knowledge of pumps and turbines •

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT toolsincluding prediction and modelling to complex engineering activities with an understanding of the limitations

PO9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

Course Outcomes (COs)

- 1. Evaluate fluid properties to analyze fluid behavior in static and dynamic conditions
- 2. Apply the principles of Bernoulli's equation and momentum analysis to evaluate fluid flow behavior and jet impact dynamics
- 3. Apply the concept of the boundary layer, Dimensional analysis, and Modal analysis to the fluid structures
- 4. Assess the performance of a model by dimensional analysis and similitude
- 5. Compute the efficiency and performance of pumps and turbines

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

5	2	2	-	2	-	-	-	-	2	-	-	-	1	-

UNIT I

FLUID PROPERTIES AND FLUID STATICS

Concept of Continuum, Properties of Fluid, Classification of fluids, Types of fluid flow Streamline, Streamlines, and path line, Pascals Law and Hydrostatic Law, Pressure and its variation in a static Fluid, Measurement of fluid pressure Manometers, Buoyancy and meta-Centre, Stability analysis and applications

UNIT II

FLUID KINEMATICS AND DYNAMICS

Continuity equation, Velocity Potential and Stream function, Bernoullis equation, and its applications, Impulse- Momentum principle, Impact of Jet, Velocity triangle.

UNIT III

FLOW THROUGH PIPES AND CHANNELS

Laminar and turbulent flows in circular pipes, Major and Minor losses in pipes, Darcy Weisbach equation, Hagen Poiseuille equation, Multi reservoir problems, pipe network design, Types of open Channel flows, Measurement of discharge in open channels, Notches, Most economical channel section.

9 Hours

3024

8 Hours

UNIT IV

UNIT V

DIMENSIONAL ANALYSIS AND MODEL TESTING

of preventing the boundary layer separation

HYDRAULIC MACHINES

turbine, Kaplan and turbines, Specific speed, Performance characteristics, Selection of turbines, Turbine efficiencies

EXPERIMENT 1 Find the coefficient of discharge by suitable device that is most accurate to measure the fuel and air distribution in the carburetor of an IC engine in a two wheeler Also, in Pasteurization and Sterilization process. Discuss the effects of the Reynolds number and friction factor in relation to the rate of flow.

Buckinghams pitheorem and Application of theorem in fluid flow Reynolds, Froude, and Mach number and their applications in model testing, Boundary layer thickness, Momentum integral equation, Drag and lift, Separation of the boundary layer, and Methods

Centrifugal pumps, Work done, Head developed, Pump output and Efficiencies, priming - minimum starting speed, performance of multistage pumps, Cavitation, methods of prevention, Pump characteristics, Classification of hydraulic turbines, Pelton wheel, Francis

EXPERIMENT 2

Analyze the friction factor of various pipes in a distribution of a water supply for domestic applications

EXPERIMENT 3

Determine the coefficient of discharge by suitable device used to monitor and control the flow of water and chemicals inwater treatment plants

EXPERIMENT 4

Analyze the Lift and drag force of an aero foil design used in a windmill for power generation

EXPERIMENT 5

Conduct the performance test of a suitable turbine that is used to extract energy from waterfalls whose water dropsdown from a height of about 500 m to generate power in Hydropower station

EXPERIMENT 6

Conduct the test from which electricity is to be generated has its reservoir fully filled up during the rainy seasonand the level drops down during summer. A turbine has to be put up such that it can accommodate both cases in a hydropower station

EXPERIMENT 7

Determine the efficiency of a pump to pump water to a very high elevation, say >300 ft, and high viscous fluid used for an irrigation and Chocolate Industry

Total: 75 Hours

Course Objectives

- To make the students to apply static equilibrium of rigid bodies both in two dimensions and also in three dimensions.
- To comprehend the effect of friction on equilibrium.
- To understand the geometrical properties of surfaces and solids.
- To understand various terms involved in Projectiles.
- To apply dynamic equilibrium of particles in solving basic problems.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of CivilEngineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Apply fundamental concepts to analyze structural stability and force interactions.
- 2. Apply the concepts of friction to solve various problems dealing with friction.
- 3. Apply the principles to analyze the structural properties of plane areas and solid bodies.
- 4. Solve problems in rigid body dynamics (kinematic systems).
- 5. Solve problems in rigid body dynamics (kinetic systems).

5	2	1	-	-	-	-	-	-	-	-	-	-	-	1

UNIT I

INTRODUCTION TO MECHANICS AND FORCE CONCEPTS

Principles and Concepts - Laws of mechanics - system of forces - resultant of a force system - Lamis theorem - moment of a force - Varignons theorem - resolution of a force into force and couple - force in space - equilibrium of a particle in space.

UNIT II

BASIC STRUCTURAL ANALYSIS ANDFRICTION

Beams and types of beams - Simple Trusses - Method of Joints - Method of Sections. Friction resistance - classification of friction - laws of friction - angle of repose - cone of friction - free body diagram - equilibrium of a body on a rough inclined plane - non concurrent force system - ladder friction - rope friction - wedge friction - virtual work method.

UNIT III

GEOMETRICAL PROPERTIES OF SECTION

Centroids - determination by integration - moment of inertia - product of inertia - principal moment of inertia of plane areas - radius of gyration - Mass moment inertia of simple solids.

UNIT IV

BASICS OF DYNAMICS - KINEMATICS

Kinematics and kinetics - displacements, velocity and acceleration - equations of motion - rectilinear motion of a particle with uniform velocity, uniform acceleration, varying acceleration - curvilinear motion of particles - projectiles - angle of projection - range - time of flight and maximum height - kinematics of rigid bodies.

9 Hours

9 Hours

9 Hours

9 Hours

BASICS OF DYNAMICS - KINETICS

Newtons second law of motion - DAlemberts principle, dynamics equilibrium - work energy equation of particles - law of conservation of energy - principle of work and energy. Principles of impulse and momentum - equations of momentum - laws of conservation of momentum. Impact - time of compression, restitution, collision - co-efficient of restitution - collision of elastic bodies by direct central impact and oblique impact - collision of small body with a massive body - kinetic energy of a particle-kinetics of rigid body rotation.

35

Course Objectives

- Understand the concept of good values and comprehend the importance of value-based living.
- Recognize the culture of peace through education.
- Identify and apply the practices for value development and clarification.

Programme Outcomes (POs)

PO8 Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. PO9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. PO10 Communicate effectively on complex engineering activities with the engineering community and with society atlarge, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Understand the importance of human values and ethics in life.
- 2. Execute the importance of harmonious living in a diverse society.
- 3. Analyze the sensitivity to the crying needs of society such as ungodliness, corruption, poverty, and suffering, and play a vital role in eradicating them.
- 4. Plan intellectually mature, morally upright, ethically correct, and spiritually inspired decisions.
- 5. Execute a correct balance between professional excellence and social commitment.

UNIT I

COURSE INTRODUCTION - NEED, BASIC GUIDELINES AND ANALYSIS

Importance of Human Values & Ethics in 21st Century - Understanding the theory of basic human values and ethics - Openness to change - Self enhancement - Conservation - Self transcendence - Schwartz Value Survey: Self-Assessment

UNIT II

EMBRACING THE COMMON ETIQUETTE

Altruism- Integrity - Freedom - Justice - Honesty - Truthfulness - Responsibility - Compassion

UNIT III

CONTINUOUS HAPPINESS AND PROSPERITY

An overview on basic Human Aspirations - Understanding and living in harmony at various levels of life - Embracing self-love and wellness - Understanding harmony in the family and society

UNIT IV

UNIVERSAL HUMAN VALUES AND PROFESSIONAL ETHICS

Reflection on growing global multifold problems: poverty, pollution, hunger, disease, unemployment, caste system, child labour, gender equality, politics and violence. Understanding the challenges in cultural, personal, social, political, and economic environment

6 Hours

ind

6 Hours

6 Hours

UNIT V

UNDERSTANDING HARMONY IN THE NATURE AND EXISTENCE - WHOLE EXISTENCE AS CO-EXISTENCE Understanding the harmony in Nature - Holistic perception of harmony at all levels of existence - Practice Exercises andCase Studies will be taken up in Practice Sessions

22HS005 SOFT SKILLS AND EFFECTIVE COMMUNICATION 0 0 2 1

Course Objectives

- Communicate proficiently in formal discussions at the workplace.
- Describe experiences and events, and briefly give reasons and explanations for opinions and plans.
- Interact with a degree of fluency and spontaneity that results in efficacious communication
- Convey agreement and disagreement in a polite but firm manner
- Communicate with coherence and imagination in both written and spoken formats

Programme Outcomes (POs)

PO9: Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings Problem Analysis: identify, formulate, review research literature, and analyze complex engineering

problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Enhance confidence in expressing thoughts in grammatically proper language and etiquette in waiting for the opportunity to provide input.
- 2. Effectively communicate in English on formal occasions and proficiency in the use of link words and otherdiscourse markers
- 3. Provide constructive feedback and file logical complaints.
- 4. Analyse the understanding of oral and written communication in real-world situations.
- 5. Apply the improved spelling and punctuation in writing and heightened understanding of tone, pitch and stress inoral formats.

5	-	-	-	-	-	-	-	-	2	3	-	-	-	-

Articulation Matrix

UNIT - I - SELF-EXPRESSION

10 Hours

Group discussion/ Peer discussion - Communicating decisions and opinions - Tone, Pitch, Stress - Agreeing, Disagreeing, Suggesting, Speculating - Comparing and Contrasting - Comparatives and Superlatives – Discourse - Effective Communication Types of communication - Written vs Spoken - Contractions Intonation Stress Active voice - Question tags - Confidence and body language Guided writing- Outlining Main Points - Group discussion/Peer discussion - Avoiding common errors Reduction of MTI - Common errors - Barriers to communication Accent

UNIT - II - CREATIVE EXPRESSION

JAM, Debate, Review writing, Social media posts Synonyms - Antonyms Cloze test Phrasal verbs Spotting errors Collocation - Commonly mispronounced

UNIT - III - FORMAL EXPRESSION

Writing: Giving written feedback, Review writing, and Letter of complaint. Speaking: Giving constructive feedback and offering suggestions, asking for inputs, commenting politely on appropriate phrases - Giving written feedback, Review writing, and Letter of complaint. Critical reasoning - Modal verbs - Polite ways to express negatives

22CE401 WATER RESOURCES ENGINEERING

Course Objectives

- To impart knowledge on spatial and temporal distribution and hydrologic estimates of water resources.
- To disseminate the knowledge on methods of irrigation and design aspects of hydraulic structures for river and reservoir management.
- To emphasize the need for water resources planning and management.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specifiedneeds with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO11 Demonstrate knowledge and understanding of the engineering and management principles and apply these to ones own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve awide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Assess the availability and usage of water resources with inference to the need for water conservation and irrigationwater management.
- 2. Evaluate rainfall measurement techniques, runoff estimation, and hydrograph analysis to optimize water resource management.
- 3. Analyze precipitation, runoff estimation, and hydrograph analysis to assess water flow dynamics for hydrological applications.
- 4. Assess reservoir planning, flood control strategies, and water resource management techniques to enhance sustainability and operational efficiency.
- 5. Estimate the groundwater availability based on the aquifer properties and to design and test the performance of wells.

3104

WATER AVAILABILITY AND USAGE

Hydrologic cycle- Meteorological and hydrological parameters - Water-budget equation - consumptive and
uses - Water requirement by crops - Irrigationnon- consumptive water
scheduling - Water
irrigationresourcessurvey -Water scarcity anditsimpacts -Water resourcesplanning - Watershedmanagement - National water policy.water policy.water policy.water scarcity andwater policy.

UNIT II

FUNDAMENTALS OF HYDROLOGY

Types of precipitation Measurements of rainfall Statistical analysis of rainfall data Estimation of losses from precipitation Measurement and estimation of evaporation, transpiration and infiltration estimation of runoff - Stream gauging and rating curves - Hydrograph types, construction and analysis - Peak discharge estimation.

UNIT III

IRRIGATION CANALS AND HYDRAULIC STRUCTURES

Classification of irrigation methods Types of surface irrigation Classification of canals Design andmaintenance of lined canal Design considerations of flow diversion works and regulators Gravity dams types analysis and maintenance-Types and functions of spillways and energy dissipators - Seepage control and drainage design.

UNIT IV

RESERVOIR PLANNING AND MANAGEMENT

Single purpose and multipurpose reservoir - Determination of storage capacity and yield - Strategies for reservoir operation - Reservoir reliability - Reservoir sedimentation and desilting - Reservoir flood routing - Muskingum channel routing - Methods of flood control - Flood forecasting and warning - Economic analysis of water resources projects.

UNIT V

GROUNDWATER HYDROLOGY

Aquifer properties - Darcys law - Dupuits assumptions - Well hydraulics - Steady state models for confined and unconfined aquifers - Pumping test and recuperation test - Estimation of well yield - Construction of open wells and borewells - Well shrouding and well development - Groundwater conservation practices.

22CE402 MECHANICS OF DEFORMABLE BODIES

Course Objectives

- Develop the understanding on the state of stresses and strains in engineering components as a result of differentloading conditions.
- Provide the principles and equations, and necessary tools to analyze structural members under axial loads, bending, shear, and torsion.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PS02 Graduates will be able to implement various software tools and smart technologies to solve awide range of CivilEngineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Compute the simple stress and strain for one and two dimensional elements.
- 2. Evaluate Principal stress, strain and analyze thin cylinders.
- 3. Determine and plot shear force and bending moment diagram for statically determinate beams.
- 4. Evaluate the slope and deflection of statically determinate beams using different methods.
- 5. Analyze column behavior under axial and bending loads to assess structural stability.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PS01	PSO2

5	1	3	-	-	-	-	-	-	-	-	-	-	-	-

UNIT I

STRESSES AND STRAINS

Stress at a point - Types of stress - Strain at a point - Types of strain - Elastic limit - Hookes law - Modulusof elasticity - Stress-Strain diagram - Stresses in composite bars - Thermal stresses - Poissons ratio Rigidity modulus - Bulk modulus - Relation between elastic constants.

UNIT II

TWO DIMENSIONAL STATE OF STRESS

Two dimensional state of stress at a point -Normal and shear stresses on any plane -Principal planes and principal stresses - Maximum shear stress - Analytical methods and Mohrs circle method -Two dimensional state of strains at a point - Principal strains and their directions. Thin Cylinder Stresses and deformations in thin walled cylinders and spherical shellsdue to internal pressure.

6 Hours

6 Hours

UNIT III

BENDING AND STRESSES IN BEAMS

Shear force and bending moment for cantilever, simply supported and over hanging beams for any type of loading -Relationship between rate of loading, shear force and bending moment - Theory of simple bending - Assumptions - Analysis for bending stresses - Load carrying capacity of beams - Flitched beams - Stresses in solid and hollow circular shafts.

UNIT IV

DEFLECTION OF STATICALLY DETERMINATE BEAMS

Governing differential equation - Macaulays method - Moment area method - Conjugate beam method - Strain energy method.

UNIT V

COLUMNS AND STRUTS

Columns - Slenderness ratio - Calculation of stresses in short columns due to axial load and uni-axial and biaxial bending moments -Core of the section - Buckling load of long columns - Eulers theory -Different end conditions - Rankine''s formula - Straight line formula.

22CE403 CONCRETE TECHNOLOGY

Course Objectives

- To impart a sound technical knowledge on the ingredients of conventional and special concrete.
- To impart basic knowledge on the properties of fresh and hardened concrete.
- To provide basic understanding on the usage of different admixture in enhancing the specific requirements of theconcrete.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specifiedneeds with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadestcontext of technological change.

PS01 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

Course Outcomes (COs)

- 1. Analyze the properties of concrete ingredients as per IS code.
- 2. Apply mix proportion principles to design a concrete mix by using IS code.
- 3. Evaluate the hardened concrete properties.
- 4. Examine the concrete properties based on the addition of admixtures.
- 5. Evaluate the properties, applications, and performance of advanced concrete types for enhanced durability and sustainability.

Articulation Matrix

UNIT I

INGREDIENTS OF CONCRETE

Cement - Different types - Chemical composition and Properties - Hydration of cement - Tests on cement - IS Specifications - Aggregates - Classification - Mechanical properties and tests as per BIS -Grading requirements - Water - Quality of waterfor use in concrete.

UNIT II

ADMIXTURES MIX DESIGN

Accelerators - Retarders - Plasticizers - Super plasticizers - Water proofers - Mineral Admixtures like Fly Ash, Silica Fume, Ground Granulated Blast Furnace Slag and Metakaolin - Effects on concrete properties - Principles of Mix Proportioning - Properties of concrete related to Mix Design - Physical properties of materials required for Mix Design - Design Mix and Nominal Mix- BIS Method of Mix Design - Mix Design Examples.

UNIT III

MANUFACTURING AND FRESH PROPERTIES

Manufacturing Process - Batching - Mixing - Transporting & placing - Compaction and Placing - Curing finishing - Workability tests - Slump test - Segregation & Bleeding - Ready Mix concrete - Quality control of Ready mix concrete.

9 Hours

9 Hours

3024

UNIT IV

HARDENED CONCRETE

Hardened concrete properties - Determination of strength Properties of Hardened concrete - Stress- strain curve for concrete - Modulus of elasticity - Durability of concrete - Water absorption - permeability - Corrosion test - Acid resistance - Non Destructive test of Concrete.

UNIT V

SPECIAL CONCRETE

Lightweight concrete - Foam concrete - Self compacting concrete - Vacuum concrete - High strength concrete - Fiber reinforced concrete - Ferrocement - SIFCON - Shotcrete - Polymer concrete - High performance concrete - Geopolymer Concrete.

EXPERIMENT 1	2 Hours
Testing the properties of cement.	
EXPERIMENT 2	3 Hours
Test on setting time of cement.	
EXPERIMENT 3	3 Hours
Testing the properties of fine aggregates	
EXPERIMENT 4	4 Hours
Testing the properties of coarse aggregate	
EXPERIMENT 5	2 Hours
Mix design of concrete	
EXPERIMENT 6	5 Hours
Testing the fresh properties of concrete.	
EXPERIMENT 7	2 Hours
Testing the compressive strength of concrete	
EXPERIMENT 8	2 Hours
Split tensile strength of concrete	- 110415
EXPERIMENT 9	2 Hours
Flexural strength test of concrete	
EXPERIMENT 10	5 Hours
Non- destructive testing of hardened concrete	Tetel. 75 H

9 Hours

22CE404 GEOTECHNICAL ENGINEERING I

Course Objectives

- To make the students gain adequate knowledge on soil formation and characteristics.
- To make them know the significance of the soil properties.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specifiedneeds with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO10 Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadestcontext of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze soil properties to assess soil behavior and suitability for engineering applications.
- 2. Determine the stress distribution and the permeability of soils.
- 3. Evaluate the vertical stress due to external loads and consolidation settlement of clayey soils.
- 4. Compute the shear strength parameters of soils under different drainage conditions.
- 5. Analyze the stability of slopes and provide slope protection methods.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	3	2	-	3	-	-	-	-	-	1	-	1	1	1
2	3	3	-	-	-	-	-	-	-	2	-	1	1	2
3	3	3	-	-	-	-	-	-	-	1	-	1	1	2
4	3	3	-	3	-	-	-	-	-	1	-	1	1	1
5	3	2	1	2	-	-	-	-	-	1	-	1	1	2

UNIT I

SOIL FORMATION AND ITS PROPERTIES

Origin of Soils - Three phase system and phase relationships-Index Properties of soils - Clay Mineralogy - Indian Standard Soil classification system. Compaction - Factors affecting compaction - Laboratory & FieldCompaction methods.

UNIT II

PERMEABILITY AND EFFECTIVE STRESS

Flow of water through soils - Darcys law Assumptions and validity - Permeability - Coefficient of permeability - Factors affecting permeability - Permeability of stratified deposits of soils - Laboratory tests - Seepage analysis. Soil water -Various forms - Static pressure in water - Total - Neutral and effective stress distribution in soils - Liquefaction & quicksand conditions.

10 Hours

10 Hours

B.E.- CE / Minimum Credits to be earned : 164 / Regulations 2022

UNIT III

STRESS DISTRIBUTION AND CONSOLIDATION

Boussinesqs and Wester Guards theories of stresses due to concentrated loads - Circular, Rectangular load - Strip load - New Mark's chart. Consolidation - Fundamental definitions - Spring analogy - Terzaghi'''s one- dimensional consolidation theory - Time rate of consolidation - Pre-consolidation pressure and its determination - Normally, under and over consolidated soils.

UNIT IV

SHEAR STRENGTH OF SOILS

Shear strength - Factors affecting shear strength of soils- Mohr - Coulomb theory - Measurement of shear strength parameters - Direct shear - Unconfined compression - Triaxial - Drained and un-drained conditions - Vane shear tests.

UNIT V

STABILITY OF SLOPES

Types of slopes - Failure mechanism of slopes - Total and effective stress analysis - Finite slopes - Stability analysis for purely cohesive and c-phi soils - Method of slices - Friction circle method - Taylor's Stability number - Slope protection methods.

EXPERIMENT 1 Grain size distribution Specific Gravity 1. Sieve analysis and Hydrometer analysis 2. Specific gravity of soil grains	2 Hours
EXPERIMENT 2 Atterberg limits Test 1. Liquid limit 2. Plastic limit 3. Shrinkage limit	4 Hours
EXPERIMENT 3 Conduction of Field density test. Core cutter and sand replacement methods.	3 Hours
EXPERIMENT 4 Determination of moisture - Density relationship using Standard Proctor test	3 Hours
EXPERIMENT 5 Estimation of CBR value for pavement design at a given site	2 Hours
EXPERIMENT 6 Permeability determination Constant head and falling head methods	2 Hours
EXPERIMENT 7 One dimensional consolidation test Determination of coefficient of consolidation only	6 Hours
 EXPERIMENT 8 Determination of shear strength parameters 1. Direct shear test on cohesionless soil 2. Unconfined compression test on cohesive soil 3. Triaxial compression test 4. Vane shear test 	5 Hours
EXPERIMENT 9	3 Hours

Differential free swell and swell pressure tests

10 Hours

8 Hours

- 1. Alam Singh, Soil Engineering in Theory and Practice, Asia Publishing House, Bombay, 2nd Edition, 2009.

- 3. Karl Terzaghi, Soil Mechanics in Engineering Practice, 3rd edition, John Wiley & Sons, Inc, 1995.
- 4. IS 2720 : Part 1 to Part 41 Methods of Test for soils
- 5. IS 2720-PART V- 1970 Determination of Liquid limit and Plastic limit
- 6. IS 2720-PART IV-1975-Grain size analysis
22CE405 CONSTRUCTION MANAGEMENT

Course Objectives

- To impart knowledge on organizing project management and the importance of scheduling procedure techniques
- To impart knowledge on labour materials and equipment utilization

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specifiedneeds with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation ofdata, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO11Demonstrate knowledge and understanding of the engineering and management principles and apply these toones own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze the project life cycle to enhance project management efficiency and decision-making
- 2. Evaluate project management structures to enhance efficiency, collaboration, and project success.
- 3. Analyze construction scheduling techniques to optimize project timelines and efficiency.
- 4. Analyze labor productivity, material management, and equipment utilization strategies to enhance efficiency and costeffectiveness in construction projects.
- 5. Evaluate cost allocation strategies to optimize budgeting and financial planning in construction projects.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	3	3	1	1	1	-	-	-	-	-	1	-	-	1
2	3	3	1	1	1	-	-	-	-	-	-	-	-	2
3	3	3	1	1	1	-	-	-	-	-	-	-	-	2
4	3	3	1	1	1	-	-	-	-	-	1	-	-	2
5	3	2	1	2	1	-	-	-	-	-		-	-	2

UNIT I

INTRODUCTION TO PROJECT MANAGEMENT

Introduction - Project Life Cycle - Types of Construction - Selection of Professional Services - Construction Contractors - Financing of Constructed Facilities - Legal and Regulatory Requirements - Changing Environment of the Construction Industry -Role of Project Managers.

UNIT II

ORGANIZING FOR PROJECT MANAGEMENT

Project Management Modern trends Strategic Planning Effects of Project Risks on Organization - Organization of Project Participants -Traditional Designer-Constructor Sequence - Professional Construction Management - Owner-Builder Operation - Turnkey Operation - Leadership and Motivation for the Project Team.

UNIT III

SCHEDULING PROCEDURES AND TECHNIQUES

Construction Schedules Critical Path Method Scheduling Calculations Float Presenting Project Schedules Scheduling for Activity-On-Node and with Leads, Lags, and Windows Scheduling with Resource Constraints and Precedence Use of Advanced Scheduling Techniques.

9 Hours

3024

LABOUR, MATERIAL AND EQUIPMENT UTILIZATION

Historical Perspective - Labour Productivity - Factors Affecting Job-Site Productivity - Labour Relations in Construction - Problems in Collective Bargaining - Materials Management - Material Procurement and Delivery - Inventory Control - Tradeoffs of Costs in Materials Management. - Construction Equipment - Choice of Equipment and Standard Production Rates - Construction Processes Queues and Resource Bottlenecks.

UNIT V

COST ESTIMATION

9 Hours

Costs Associated with Constructed Facilities - Approaches to Cost Estimation - Type of Construction Cost Estimates - Effects of Scale on Construction Cost - Unit Cost Method of Estimation - Methods for Allocation of Joint Costs.

EXPERIMENT 1 Basics concept of project management tools	3 Hours
EXPERIMENT 2	3 Hours
Draw the bar chart of residential building for given construction task	
EXPERIMENT 3	3 Hours
Design the housing unit project extract from workers requirement for crash program	
EXPERIMENT 4 Design the Activity and workers requirement for foundation	4 Hours
EXPERIMENT 5	3 Hours
EXPERIMENT 6	4 Hours
Design the network for pumping station and analyse using critical path method	
EXPERIMENT 7 Determine the activity based on floating method for small scale project	3 Hours
EXPERIMENT 8 Estimate the expected activity duration in PERT network	4 Hours
EXPERIMENT 9	3 Hours
Determine the standard deviation in normal distribution for a project	_

22HS007 ENVIRONMENTAL SCIENCE

Course Objectives

- Understand the interdisciplinary and holistic nature of the environment
- Identify the significance of natural resources and environment on the quality of life and stimulate the quest forsustainable development
- Assess the socio-economic, political and ethical issues in environmental science

Programme Outcomes (POs)

PO1: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Course Outcomes (COs)

- 1. Apply principles of natural resource management to analyze exploitation cases in forestry, water, minerals, and agricultural sectors, assessing their environmental impacts.
- 2. Analyze the different types of ecosystems and biodiversity, its values and also role of professionals in protecting the environment from degradation
- 3. Analyze the existing environmental challenges related to pollution and its management
- 4. Analyze the impacts of unsustainable practices, waste management, climate change, and water conservation on environmental sustainability
- 5. Analyze the impact of population and human activities on environment

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	1	2	-	-	-	-	-	-	-	-	-	-	-	-
2	1	1	-	-	-	-	-	-	-	-	-	-	-	-
3	2	2	-	-	-	-	1	-	-	-	-	-	-	-
4	1	-	-	-	-	-	-	-	-	-	-	-	-	-
5	2	-	-	-	-	-	-	-	-	-	-	-	-	-

UNIT I

NATURAL RESOURCES

Forest resources: Use - over exploitation - deforestation - case studies. Water resources: Use - over utilization of surface and ground water - conflicts over water. Mineral resources: Use - exploitation - environmental effects of extracting and using mineral resources - case studies. Food resources: Effects of modern agriculture - fertilizer - pesticide problems (eutrophication, blue baby syndrome, biomagnification). Energy resources - renewable (solar, wind, and hydro).

UNIT II

ECOSYSTEMS AND BIODIVERSITY

Concept of an ecosystem: Structure and function of an ecosystem - producers - consumers - decomposers - food chains - food webs and ecological pyramids - Types of ecosystem: Introduction - characteristic features: desert ecosystem. Biodiversity - value of biodiversity - threats to biodiversity - endangered and endemic species - Conservation of biodiversity: In-situ and ex-situ conservation of biodiversity.

UNIT III

ENVIRONMENTAL POLLUTION

Pollution: Definition - causes - effects - control measures of air pollution - Water pollution - Sewage water treatment by activated sludge and trickling filter process - Noise pollution - Thermal pollution. Disaster management - causes - effects -control measures of floods - Earthquake

6 Hours

2000

6 Hours

UNIT IV

SOCIAL ISSUES AND ENVIRONMENT

Sustainable development - Definition - Unsustainable to sustainable development - solid waste management - causes - effects - 5R Principles - landfills, incineration, composting. Water conservation - rain water harvesting - watershed management. Climate change - Global warming - acid rain - Ozone layer depletion. E-waste

UNIT V

HUMAN POPULATION AND ENVIRONMENT

Human population: Population growth - characteristics - variation among nations - population explosion - value education - HIV / AIDS. Role of information technology in environment and human health - occupational safety and health administration (OSHA)

22HS008 ADVANCED ENGLISH AND TECHNICAL EXPRESSION 0 0 2 1

Course Objectives

- To enable students to achieve proficiency in academic writing
- Effectively use and appreciate the nuances of the language and engage an audience
- Use advanced tools of language to improve communicative competence and prepare for professional demands at the workplace

Programme Outcomes (POs)

PO9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. PO10 Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Infer the clarity in articulating the objectives and aims and improved proficiency in using the English language
- 2. Communicate effectively and with good interpersonal skills; speak in public, engagethe audience, and lead a group discussion
- 3. Critically evaluate the ethics of persuasive appeals and confidence to influence opinion
- 4. Analyse a specific piece of information; take in what is read, and use good writingtechniques with proper grammar and syntax in all formal situations
- 5. Create awareness and empathy to emotional signals in communication

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

5	-	-	-	-	-	-	-	-	2	3	-	-	-	-

UNIT I

CREATIVE EXPRESSION

Proposals & Grant applications, Argumentative essays & editorials, Sales Pitches, Campaigning, Commercials/advertisements, effectively answering the famous interview question: 'Why should we hire you?' Sentence and paragraph formation - Rhetorical questions - Emphasis & effective repetition - Empathetic expression, knowing the audience, capturing attention - Creating Memes, Comic Strips, Stand-up comedy, Caption writing, and Limericks, Vocabulary and slang words for comedy - Similes & Metaphors -Homophones, homonyms, alliteration, wordplay

UNIT II

FORMAL EXPRESSION

Writing: Action plans, Cover letters, Mind-Mapping, Paragraph writing Logical reasoning

- SVA - Advanced level - Style: Clarity, Concision, Coherence, Evocativeness, EfficaciousVocabulary - Conditional Clause - Be verbs- Tenses- advanced - Opening and closing sentences - Action plans, Anecdotal references, order of communication/ narration, complete communication- Wh-questions - Effective beginning and closing - Rhetorical questions - Appraising target audience - Pronunciation, Enunciation, Tone, Pace and Volume. - Writing: SOPs, Research Objectives, Thesis Statement, Indexing, Scholarly Articles, Academic Writing, Executive Summary, Survey Questionnaires, Citations and Bibliography - Reading: Quantitative & qualitative analysis, Analysis and paraphrasing of reference materials Speaking: Commentate live events, give instructions to operate machines/ conduct TASKs Listening: Informational listening, Reflective listening, - Discriminative listening - Connective words - Prefixes and Suffixes - Quoting and paraphrasing Proofreading - Directed writing and writing formats - Note taking - Active verbs

22CE501 DESIGN OF RCC ELEMENTS

Course Objectives

- □ Understand the interdisciplinary and holistic nature of the environment
- □ Identify the significance of natural resources and environment on the quality of life and stimulate the quest forsustainable development
- Assess the socio-economic, political and ethical issues in environmental science

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Apply the working stress method to design singly and doubly reinforced concrete sections.
- 2. Analyze the behavior of slab and staircase based on the limiting condition.
- 3. Apply limit state design principles to analyze and design singly and doubly reinforced beams.
- 4. Evaluate the behavior of flexural elements subjected to shear and torsion.
- 5. Apply limit state design principles to analyze and design short and long columns.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

5	2	3	1	-	-	-	-	-	-	-	-	-	1	-

UNIT I

WORKING STRESS METHOD

Aims of design - Method of design - Working stress method - Assumptions - Stress strain behavior of steel and concrete - Stress block parameters - Design of singly and doubly reinforced rectangular sections by working stress method.

UNIT II

LIMIT STATE DESIGN OF SLAB AND STAIRCASE

Limit state method - Principles - Partial safety factor - Design of RC rectangular one and two way slabs subjected to uniformly distributed load by limit state method -Introduction to flat slab - Types of stairs - Design of stairs spanning horizontally - Design of dog legged stair.

UNIT III

LIMIT STATE DESIGN OF BEAMS FOR FLEXURE

Stress block parameters - Neutral axis for Balanced, Under Reinforced and Over Reinforced Sections - Design of singly reinforced rectangular section - Design of doubly reinforced rectangular section - Design of flanged (T & L) beams.

9 Hours

9 Hours

9 Hours

3104

UNIT IV

LIMIT STATE DESIGN OF BEAMS FOR SHEAR

Shear forces in beam - Types of shear resistance - Design of vertical stirrups - Design of Bent-up bars - Development length - Design of beams for flexure, shear and torsion (Combined effect) - Parameters considered in limit state of serviceability - Check for deflection and crack width.

UNIT V

LIMIT STATE DESIGN OF COLUMNS

Types of columns - Provisions of IS-456 code for the design of columns - Design of short columns subjected to axial load, uniaxial and biaxial bending moment - Design of long column subjected to axial load.

22CE502 STRUCTURAL ANALYSIS I

Course Objectives

- To impart knowledge on the different methods of analysis of statically indeterminate structures.
- To impart knowledge on moving loads and influence line diagrams.
- To provide a thorough understanding on analysis arches.
- At the end of the course students will be conversant with classical methods of analysis.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in thebroadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of CivilEngineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Compute the member forces and deflection of determinate and indeterminate structures.
- 2. Apply the slope deflection method to analyze continuous beams and rigid frames, considering sway and support displacements
- 3. Analyze the bending moment and shear force for beam, sway and non-sway frame by moment distribution method.
- 4. Analyze the behavior and structural response of three-hinged, two-hinged, and fixed arches, considering settlement and temperature effects.
- 5. Analyze moving loads and influence line diagrams to determine critical shear forces and bending moment.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	1	2	-	-	-	-	-	-	-	-	-	2	1	1
3	1	2	-	-	-	-	-	-	-	-	-	1	2	2
4	1	2	-	-	-	-	-	-	-	-	-	2	2	3
5	1	3	-	-	-	-	-	-	-	-	-	1	1	2

UNIT I

ANALYSIS OF DETERMINATE AND INDETERMINATE TRUSS MEMBER

Determination of Static and Kinematic structures - Degree of Freedom - Analysis of plane trusses by method of joint, method of section and tension coefficient method - Deflection of statically determinate pin jointed trusses and rigid jointed frames by energy method and unit load method - Analysis of pin connected indeterminate trusses by consistent deformation method.

UNIT II

SLOPE DEFLECTION METHOD

Derivation of slope deflection equations - Application to Continuous beams and rigid frames (with and withoutsway) - Effect of Support displacements.

9 Hours

9 Hours

3104

UNIT III

MOMENT DISTRIBUTION METHOD

Absolute and relative stiffness and carry over factors - Analysis of continuous beams - Plane rigid jointedframes with and without sway - Effect of settlement of supports - Nayler's simplification.

UNIT V ARCHES

Arches as structural forms - Examples of arch structures - Types of arches - Analysis of three hinged, two hinged and fixed arches having parabolic and circular shapes - Settlement and temperature effects.

UNIT V MOVING LOADS AND INFLUENCE LINES

Influence Lines: Introduction - Construction of ILD for shear force and bending moment at a sections- determination of load positions for maximum shear force and bending moments for simply supported and overhanging beams with several point loads and UDL and determination of their values - Sketching of absolute maximum BMD.

22CE503 WATER SUPPLY AND WASTEWATER ENGINEERING

Course Objectives

- To impart knowledge on the quality and quantity of water.
- To select a suitable method of water treatment and to find the capacity of a water treatment plant.
- To deliver the knowledge on various systems of collection and treatment of municipal wastewater.
- To emphasize the need for sewage treatment and to impart training to design the various treatment units.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Estimate the quantity of water and analyse its quality parameters.
- 2. Design the coagulation, flocculation and sedimentation tanks including intake structures.
- 3. Design the filtration and disinfection units and select the typical distribution layout.
- 4. Estimate the quantity of sewage and analyse its characteristics to design sewers including storm water flow.
- 5. Design the important sewage treatment units including sludge disposal.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

UNIT I

QUANTITY AND QUALITY OF WATER

Introduction: Scope for Environmental Engineering - Need for protected water supply - Quantity of Water - Population Forecasting methods - Per capita demand - Types of water demands Characteristics of water with respect to BIS standards - Water borne diseases.

UNIT II

SOURCE, CONVEYANCE AND TREATMENT OF WATER

Intakes - pipes - Design for the economical diameter of the rising main - Nomograms - Objectivesof water treatment - Typical flow chart of a water treatment plant - Aeration - Sedimentation - Settling tanks - Types - Design of sedimentation tanks.

8 Hours

8 Hours

3024

UNIT III

FILTRATION, DISINFECTION AND DISTRIBUTION

Filtration Design of Rapid sand and slow sand filters - Disinfection - Distribution- Layouts of distribution system - Distribution reservoirs - Storage capacity of distribution reservoirs - Automation in Water Supply -Water Economics and Pricing.

UNIT IV

QUANTITY OF SEWAGE

Types of sewerage systems suitability - Dry weather flow - Computation of design flow - Estimation of storm flow -Time of concentration - Design of storm water drain - Characteristics of sewage - Design of Sewers - Sewer Materials - Non Silting and Non Scouring Velocities. Manholes

- Water seal system.

UNIT V

TREATMENT OF SEWAGE

Types of Treatment - Flow diagram of a typical municipal sewage treatment plant - Primary Treatment -Screening - Grit chambers - Skimming tanks - Primary sedimentation tanks - Sludge deposit - Secondary treatment -Concepts of Aerobic and Anaerobic activity - Trickling filter - Activated sludge process - Secondary sedimentation tanks - Tertiary treatment - Sludge digestion and filter beds - Methods of sludge disposal- Sustainable treatment technologies.

EXPERIMENT 1 Determination of Acidity and Alkalinity in the given water/wastewater sample.	3 Hours
EXPERIMENT 2 Estimation of Hardness and Chlorides in the given water and wastewater sample.	3 Hours
EXPERIMENT 3 Analysis of Sulphates in the given sample.	3 Hours
EXPERIMENT 4 Estimation of available chlorine in Bleaching powder and chlorine demand for the given sample	3 Hours
EXPERIMENT 5 Determination of pH and Turbidity for the given sample.	3 Hours
EXPERIMENT 6 Determination of optimum coagulant dosage for the given sample.	3 Hours
EXPERIMENT 7 Estimation of Dissolved Oxygen and Bio Chemical Oxygen Demand for the given water/wastewater sample	6 Hours

EXPERIMENT 8

6 Hours Determination of Chemical Oxygen Demand and Solids(Total and Dissolved - organic and inorganic solids) for the given water/wastewater sample.

10 Hours

9 Hours

Total: 75 Hours

22CE504 GEOTECHNICAL ENGINEERING II

Course Objectives

- To impart fundamental knowledge on investigation of the site and selection of suitable foundation.
- To impart knowledge on the design concepts of different types of foundations & earth retaining structures.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate the foundation selection criteria to ensure structural stability and soil suitability for construction projects.
- 2. Compute the bearing capacity and settlement of soil.
- 3. Evaluate the size of shallow foundations.
- 4. Estimate the load carrying capacity of piles and settlement of pile groups.
- 5. Analyze the lateral earth pressure on retaining wall.

Articulation Matrix

5	3	3	1	-	-	-	-	-	-	-	-	-	2	2

UNIT I

SITE INVESTIGATION AND SELECTION OF FOUNDATION

Scope & Objectives - Methods of exploration - Depth and spacing of bore holes - Sampling of soil - Methods of sampling - Penetration tests (SPT, SCPT and DCPT) - Interpretation - Bore log report - Requirements of good foundation - Factors governing location and depth of foundation - Types & Selection of foundation.

UNIT II

SHALLOW FOUNDATION

Bearing capacity of shallow foundation on homogeneous deposits - Terzaghi"s formula and BIS formula - Bearing Capacity from insitu tests (SPT, SCPT and Plate load) - Settlement - Components of settlement - Determination of settlement of foundations on granular and clay deposits - Allowable settlements (As per IS Codal provisions) - Methods of minimizing total and differential settlement.

9 Hours

9 Hours

3003

UNIT III FOOTINGS AND RAFT

Contact pressure distribution below footings - Types and uses of shallow footings - Proportioning of Isolated and Combined footings - Strap footings - Principles of design of mat foundation.

UNIT IV

PILE FOUNDATION

Types of piles and their function - Factors influencing the selection of pile - Carrying capacity of single pilein granular and cohesive soil - Static formula - dynamic formulae (Engineering news and Hiley''s) - Interpretation with in situ tests (SPT, SCPT and Pile load test) - Negative skin friction - Group capacity by different methods (Feld''s rule and block failure criterion) - Settlement of pile groups.

UNIT V

EARTH PRESSURE

Active and passive earth pressure - Rankine's theory - Coloumb's wedge theory - Earth pressure on retaining walls including the effect of surcharge for c and c-phi soil under dry and saturated conditions - Deep excavation support techniques.

22CE507 MINI PROJECT I

Course Objectives

- Identify the problem statement and apply the engineering concepts to find the solution.
- Improve the analysing capability of the students.
- Increase the exuberance in finding the solution to various problems.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO8 Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10 Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11 Demonstrate knowledge and understanding of the engineering and management principles and apply these to ones own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life- long learning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Formulate a real-world problem, identify the requirement, and develop the design solutions.
- 2. Infer technical ideas, strategies, and methodologies.
- 3. Examine the new tools, algorithms, and techniques that contribute to obtaining the solution of the project.
- 4. Design and validate through conformance of the developed prototype and analysis of the costeffectiveness.
- 5. Prepare the report and present oral demonstrations.

22CE601 DESIGN OF RCC STRUCTURES

Course Objectives

- To impart knowledge on the basic design philosophy of R.C.C structures. •
- To make students be familiar about the codal provisions for the design of R.C.C structures

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO1 Graduates will be able to apply technical skills and modern engineering tools with critical thinking and innovations for solving civil engineering problems.

PSO2 Graduates will be able to design sustainable and smart infrastructure in the context of environmental, economical, and societal requirements and serve the community as ethical and responsible professionals.

Course Outcomes (COs)

- 1. Analyze the behavior foundation based on loading conditions.
- 2. Analyze the retaining walls, considering stability requirements and surcharge effects.
- 3. Analyze and design of liquid storage structures as per Indian standard codal provision.
- 4. Analyze and design a deck slab and T beam bridges by evaluating the critical load.
- 5. Evaluate prefabrication principles, materials, and structural behavior.

Articulation Matrix

UNIT I

FOUNDATIONS

Design of Isolated footings: square and rectangular footing - Design of isolated footing subjected to uniaxial and biaxial moments. Design of Combined footings: rectangular and trapezoidal shape - Principles of design of mat foundation.

UNIT II

EARTH RETAINING STRUCTURES

Design of cantilever and counterfort retaining walls for any type of backfill - Stability requirements of retaining walls - Effect of surcharge loading in the design of retaining wall - Introduction to Gabion wall.

Design of underground and on ground rectangular water tanks - Use of Parts I, II and IV of IS 3370 Codes - Overhead tanks of rectangular shape and circular shape with domical roof - Design of all components including staging and foundation. Design of

UNIT III

DESIGN OF WATER TANK

underground and on ground circular water tanks.

UNIT IV

BRIDGES

Types of bridges - IRC loadings - Design of single span slab bridge deck for class A loading - Design of the deck of T - beam and slab bridge for class AA loading - Design of single span slab bridge deck for class AA loading.

9 Hours

9 Hours

9 Hours

9 Hours

3104

UNIT V

PREFABRICATED STRUCTURES

Need for prefabrication - Principles - Materials - Modular coordination - Standardization - Systems - Production - Transportation - Erection. Behavior of structural components - Construction of roof and floor slabs - Wall panels - Columns - Connection details.

Total: 45+15 = 60 Hours

9 Hours

22CE602 STRUCTURAL ANALYSIS II

• To impart a thorough knowledge about the matrix methods of structural analysis.

- To provide a thorough understanding on truss and arches of influence line diagram.
- To impart knowledge on cables and suspension bridges.
- At the end of the course students will be conversant with classical methods of analysis.

Programme Outcomes (POs)

Course Objectives

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze and construct influence line for the trusses and symmetrical arches.
- 2. Analyze the internal forces in the Cables and Suspension bridges.
- 3. Compute the forces for continuous beams, frames and trusses using the flexibility method.
- 4. Determine the displacement for continuous beams, frames and trusses using the stiffness method.
- 5. Analyze beams, frames and trusses by Kani's method and Combined mechanism method.

UNIT I

INFLUENCE LINES FOR FORCES IN PLANE TRUSSES AND ARCHES

N type truss - Pratt truss with parallel chords - Pratt truss with inclined chords - Warren truss with inclined chords. Symmetrical arches: Influence lines for horizontal thrust - Influence lines for B.M - Influence lines for S.F, B.M and normalthrust for moving concentrated loads and UDL - Muller Breslau principle.

UNIT II

CABLES AND SUSPENSION BRIDGES

Components and their Functions - Analysis of cable under concentrated loads and UDL - Shape of cable under self weight - Anchorage of suspension cables - Bending Moment and Shear Force in suspension bridges with three hinged stiffened girders -Maximum Bending Moment due to moving single concentrated load and UDL - Influence lines for Bending Moment and Shear Force -Analysis of suspension bridges with two hinged stiffening girders.

9 Hours

9 Hours

3104

UNIT III

MATRIX FLEXIBILITY METHOD

UNIT IV

MATRIX STIFFNESS METHOD

degrees of static indeterminacy.

Introduction - Equilibrium and compatibility - Analysis of continuous beams, indeterminate frames and trusses with maximum two degrees of kinematic indeterminacy.

Introduction - Computation of flexibility matrices - Analysis of continuous beams, indeterminate frames and trusses with maximum two

UNIT V

MISCELLANEOUS TOPICS

Analysis of continuous beams, indeterminate frames and trusses with maximum two degrees of static indeterminacy by Kani's method. Plastic analysis of structures - Assumptions - Moment redistribution - Analysis of fixed and continuous beams and portal frames by mechanism method.

22CE603 DESIGN OF STEEL STRUCTURES

To impart knowledge on Limit State Design Methods for steel Structures.
 To impart knowledge on the codal provisions for the design of steel structures.

with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural

projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

□ To impart knowledge on the design of connections, tension members, compression members, beams and rooftrusses.

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions

Course Outcomes (COs)

Course Objectives

Programme Outcomes (POs)

complex engineering problems.

1. Apply the codal provisions to design bolted and welded connections.

using first principles of mathematics, natural sciences, and engineering sciences.

- 2. Apply the codal requirements to design tension members, splices, lug angles and gussets.
- 3. Design compression members, Lacings, Battens and column base by applying the codal recommendations.
- 4. Design laterally supported beams, unsupported beams and plate girders by applying the codal references.
- 5. Apply the codal provisions to design the steel roof truss and gantry girder.

22CE701 HIGHWAY AND RAILWAY ENGINEERING 3 0 2 4

Course Objectives

- To provide a basic knowledge on highway planning and highway materials
- To impart a basic knowledge on geometric design and design of pavements
- To provide a basic knowledge on railway planning, design and construction

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and culturalissues and the consequent responsibilities relevant to the professional engineering practice.

PO8 Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineeringpractice.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze the modern surveying techniques to optimize road design and infrastructure development
- 2. Design various cross sectional elements of highway and construction of flexible and rigidpavements per the standards of Indian Road Congress (IRC)
- 3. Analyze the materials used for construction and maintenance of Pavements.
- 4. Analyze railway track alignment to enhance track stability, safety, and operational efficiency.
- 5. Characterize the techniques used in construction and maintenance of railway track

UNIT I

HIGHWAY PLANNING AND ALIGNMENT

Introduction to highway - Institutions for highway planning and implementation at different levels - Jayakar committee recommendations - Requirements of ideal alignment - Factors controlling highway alignment -Engineering surveys for alignment - Conventional methods and modern methods (Remote Sensing, GIS and GPS techniques) - Highway cross sectional elements - Right of Way, carriage way, camber, kerbs, shoulders and footpaths [IRC Standards].

UNIT II

GEOMETRIC DESIGN OF HIGHWAYS

Design of horizontal alignments: Super elevation, Widening of pavements on horizontal curves and transition curves [Problems]. Design of vertical alignments - gradients, summit and valley curves - Sight distances: Factors affecting sight distances, PIEV Theory, Stopping Sight Distance (SSD), Overtaking Sight Distance (OSD), [Problems in SSD and OSD] - Geometric design of hill roads [IRC Standards Only] - Design principles of flexible and rigid pavements (IRC Recommendations - Problems)

UNIT III

HIGHWAY CONSTRUCTION AND MAINTENANCE

Construction of WBM, bituminous concrete roads and cement concrete roads - Desirable Properties and Testing of Highway Materials-Soil: California Bearing Ratio Test - Aggregate: Crushing, Abrasion and Impact Tests - Bitumen: Penetration, Ductility, Viscosity, Binder Content and Softening Point Tests - Types of defects in flexible pavements and rigid pavements - Overlays - - Benkelman beam method - Roadside development and Arboriculture.

UNIT IV

RAILWAY PLANNING AND DESIGN

Introduction - Engineering survey for track alignment- Permanent Way - Components and functions of each component - Gauges in railway tracks - Coning of wheels- Creeps and kinks - Geometric design of railway tracks -Gradient - Super-Elevation - Widening of gauges in curves

UNIT V

RAILWAY TRACK CONSTRUCTION, MAINTENANCE AND OPERATION

Track construction and maintenance - Track drainage - Lay outs of railway stations and yards - Points and Crossings - Signals - Types of signals - Principles and mechanism of interlocking - Methods of interlocking - Track circuiting - Electric traction - Introduction to modern trends in Indian Railways in the design of high speed tracks - Track Modernization - Automated maintenance and upgrading.

22CE702 ESTIMATION, COSTING AND QUANTITYSURVEYING

Course Objectives

- To impart fundamental knowledge on investigation of the site and selection of suitable foundation.
- To make the students understand the methods of estimating the cost of buildings.
- To know about the rate analysis and bill preparations.
- To study about the specification writing.
- To understand the valuation of land and buildings.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and culturalissues and the consequent responsibilities relevant to the professional engineering practice.

PO8 Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Apply estimation principles to calculate quantities and costs for various building components.
- 2. Apply cost estimation techniques to determine material quantities and expenses for various construction components.
- 3. Calculate material quantities and costs for buildings, including load-bearing, framed structures, and steel components.
- 4. Demonstrate the concepts of specification writing for tenders.
- 5. Estimate the total cost of construction and plan of building for carry out valuation of assets.

Articulation Matrix

5	-	3	-	3	-	-	-	3	-	-	-	1	1	-

UNIT I

BASICS OF ESTIMATION

General items of work in Building - Earthwork - Cement Concrete work - R.C.C. work - Stonework - Brickwork - Wood work -Ironwork - Flooring - Finishing Work Standard units - Principles of working out quantities for detailed and abstract estimates - An approximate method of Estimating - Detailed Estimates of Buildings.

UNIT II

COST ESTIMATION OF QUANTITIES OF MATERIALS

Earthwork excavation - Sand filling - Lime concrete - Cement concrete - R.C.C work - Cement mortar - Brickwork -Reinforced brickwork - Stone masonry - Plastering - Painting - Flooring - White and colour washing - Distempering -Varnishing - Woodwork - Centering - Shuttering and formwork for R.C.C works - Bar bending details of RCC Elements of such as beam - Column - Slab and foundation - AC sheet roofing, etc.

UNIT III

ESTIMATION OF BUILDINGS

Load bearing and framed structures - Calculation of quantities of brickwork, RCC, PCC, Plastering, white washing, colour washing and painting / varnishing for shops, rooms, residential building with flat and pitched roof - Estimating of a septic tank and soak pit - Steel structures with flat and pitched roof.

UNIT IV

SPECIFICATION AND TENDERS

Data - Schedule of rates - Analysis of rates - Specifications - Sources - Preparation of detailed and general specifications -Tenders - Tamilnadu Tender Transparency Act - e-tender - Preparation of Tender Notice and Document - Contracts - Types of contracts - Drafting of contract documents - Arbitration and legal requirements.

UNIT V VALUATION Valuation: Purpose of valuation, types of property - Depreciation, sinking fund, Leasehold and freehold property,

obsolescence, Gross income, Outgoing and Net income, Capitalized value and year's purchase - Rental method of valuations -Typical problems.

B.E.- CE | Minimum Credits to be earned : 164 | Regulations 2022 22CE707 PROJECT WORK I 0 0 4 2

Course Objectives

- Work in teams to propose, formulate, and solve a challenging open-ended design problem of significantscope, depth, and breadth.
- Understand and incorporate engineering standards and multiple realistic constraints, within realisticdesign time, budget, and performance objectives.
- Develop a prototype of the proposed design and demonstrate the prototype in accordance with thespecifications.
- Effectively communicate information relating to all aspects of the design process in written, oral, and graphical form.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10 Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11 Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Formulate a real world problem, identify the requirement and develop the design solutions.
- 2. Infertechnical ideas, strategies and methodologies.
- 3. Examine the new tools, algorithms, techniques that contribute to obtain the solution of the project.
- 4. Analyze, Test and validate through conformance of the designed building and estimating the totalcost.
- 5. Prepare report and present the oral demonstrations.

22HS201 COMMUNICATIVE ENGLISH II 1022

CourseObjectives

- Commandover the Englishlanguage forday-to-day transactions.
- Improvelisteningand readingskills to comprehend complex content
- Enhanceconfidenceinexpressing with clarity and elegance with enthusiastic and reflective use of the language

Programme Outcomes (POs)

PO9: Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10:Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12:Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

CourseOutcomes(COs)

- 1. Engage with the Englishlanguage infunctional contexts
- 2. Expressinbothdescriptiveandnarrativeformats
- 3. InterpolateSG and make effective use of the English Language in Business contexts
- 4. Actively read and comprehend authentic text
- 5. Express opinions and communicate experiences.

UNIT I

SELF-EXPRESSION

Personal Goals and Values - Being a Team Player-Expressing strengths and Weaknesses-Abstract nouns -Adjectives-Active Listening Skills-Note Making-Pronunciation and Accent Personal goals and values - Reading for Gist and Details-Professional Ethics-Reported Speech- Conjunctions Readingskills - phonemics, word/phrase recognition, sight words Personal Goals and Values-Conditional clauses- Hypothetical questions and Answers-Sentence Structure-Simple Present Tense-Perfect tense

UNIT II

CREATIVEEXPRESSION

Instructive and Expository Expression - Creating brochures, catalogues, and manuals for products/ services, Giving directions, Process writing, Sequencing experiments, Concept Explanation-Reported Speech-Voice Sentence Equivalence-Proofreading

UNIT III FORMALEXPRESSION

15Hours

Notices and Announcements-Writing: Creating notices and circulars for events, announcing college tours and lost and Found-Varied Vocabulary - Gender Sensitive Vocabulary, Non-discriminatory Vocabulary, Concise Vocabulary-Paragraph writing - Effective titles, topics and supporting sentences, calling in registrations and queries. Effective communication- Understanding purpose, reach and target audience, achieving complete communication Punctuation - Capitalization, Numeration, Use of proper nouns and Articles-Spelling-Reading: Analyzing and interpreting notices and Circulars-Understanding the gist of short real-world notices, and messages. Culling out keywords Information words vs Supporting words-Interpreting Abbreviations, Acronyms and Short-forms-Listening: Analyzing and interpreting announcements Decoding - Screening for salient points-Note making-Raising queries for clarification-Speaking: Announcements-Giving complete information-Pronunciation and Enunciation Pace, Intonation, and Pitch-Conducting Events-Speaking: Master of ceremonies, Short speeches - welcome speech, the vote of thanks/ valedictory speech, award-acceptance speech Writing: Invitations, Preparation of script/draft after interviewing someone. Adjectives-Pronunciation/Punctuation Precision and Concision-Politeness markers

22HSH01 HINDI

Course Objectives

- To help students acquire the basics of Hindi
- To teach them how to converse in Hindi on simple day- to -day situations •
- To help students understand a simple technical text in Hindi .

Program Outcomes

PO9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10 Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Construct simple sentences and use vocabulary required for day- to -day conversation.
- 2. Distinguish and understand the basic sounds of Hindi language.
- 3. Apply appropriate grammar to write and speak in Hindi language
- 4. Comprehend the conversation and give correct meaning
- 5. Take up Hindi examinations conducted by Dakshin Bharat Hindi Prachar Sabha

1022

9 Hours

9 Hours

Course Objectives

• To help students appear for the A1 level Examination

• To teach them how to converse fluently in German in day-to-day scenarios

Program Outcomes

PO9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10 Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Listen and identify individual sounds of German
- 2. Use basic phonemes and words while speaking
- 3. Read and understand short passages on familiar topics
- 4. Use basic sentence structures while writing
- 5. Illustrate basic grammar and appropriate vocabulary in completing language tasks

22CE001/22CEH01 REPAIR AND REHABILITATION OFSTRUCTURES 3003

Course Objectives

- □ To emphasize the importance of maintenance and in section of structures.
- □ To impart fundamental knowledge on various repairing strategies.
- □ To interpret the results of non-destructive testing (NDT) and other diagnostic tools.

Programme Outcomes (POs)

PO3 Design solutions for complex engineering problems and design system components or processes that meet thespecified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and culturalissues and the consequent responsibilities relevant to the professional engineering practice.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, anddemonstrate the knowledge of, and need for sustainable development.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-longlearning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide rangeof Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze maintenance and repair strategies to assess structural deterioration and implement preventive measures
- 2. Analyze corrosion mechanisms and protection methods to enhance the durability and longevity of structures
- 3. Analyze factors affecting the serviceability and durability of concrete structures.
- 4. Apply advanced materials and techniques for repair and rehabilitation of concrete structures
- 5. Apply advanced repair and demolition techniques to restore structural integrity.

UNIT I

9 Hours

MAINTENANCE AND REPAIR STRATEGIES

Maintenance, repair and rehabilitation - Facets of maintenance - Importance of maintenance - Causes ofdeterioration - Inspection - Preventive measures - Assessment procedure for evaluating damaged structure.

UNIT II

CORROSION PROTECTION

Corrosion mechanism - Corrosion damage of reinforced concrete - Causes, Effects and Remedial measures - Methods of corrosion protection - Design and construction errors - Effects of cover thickness - Corrosion inhibitors - Corrosion resistant steels - Coatings - Cathodic protection - Deterioration of concrete, steel, masonry and timber structures - Surface deterioration and efflorescence - Preventive measures.

UNIT III

SERVICEABILITY AND DURABILITY OF CONCRETE STRUCTURES

Durability of concrete in seawater - Thermal properties of concrete - Fire resistance - Resistance to freezing and thawing - Permeability of concrete - Sulphate attack - Methods of control - Quality assurance - Conceptual bases for quality assurance schemes.

UNIT IV

MATERIALS AND TECHNIQUES FOR REPAIR

Special concrete and mortar - Concrete chemicals - Special elements for accelerated strength gain - Expansive cement - Polymer concrete - Sulphur infiltrated concrete - Ferro cement - Fiber reinforced concrete.

UNIT V

TECHNIQUES FOR REPAIR AND DEMOLITION

Rust eliminators and polymers coating for rebars during repair - Foamed concrete - Mortar and dry pack - Vacuum concrete - Gunite and Shotcrete - Epoxy injection - Mortar repair for cracks - Shoring and underpinning - Engineered demolition techniques for dilapidated structures - Case studies.

22CE002 PRESTRESSED CONCRETE STRUCTURES

Course Objectives

- Interpret the basic concept of pre-stress concrete, materials, methods and factors influencing pre-stress.
- Implement the basic assumptions of elastic analysis and design pre-stressed flexural and shearmembers

• Predict the stresses due to long term and short term deflection and design a pre-stress member accordingly

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learningin the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze the stresses in pre-stressed concrete member due to pre-stressing force and its variation due to losses.
- 2. Design the layout of cables for Type I and Type II beams based on calculation of moment of resistance.
- 3. Compute the deflections and anchorage zone stresses.
- 4. Design composite and continuous beams, applying principles of design.
- 5. Evaluate the design of circular pre-stressing and the uses of non-prestressed reinforcement

UNIT I

9 Hours

INTRODUCTION

Principles of Prestressing - Classification and types - Advantages over reinforced concrete - Materials - High strength concrete and high tensile steel - Methods of Prestressing - Freyssinet, Magnel Blaton, Lee Mc Call and Killick anchorage systems - Analysis of sections for stresses by stress concept, strength concept and load balancing concept - Losses of prestress.

UNIT II

DESIGN FOR FLEXURE AND SHEAR

shear based on IS 1343 Code.

reinforcement.

UNIT III

UNIT IV

COMPOSITE BEAMS AND CONTINUOUS BEAMS

DEFLECTION AND DESIGN OF ANCHORAGE ZONE

Types of R.C.C - P.S.C composite beams - Analysis and design of composite beams and Continuous Beams - Methods of achieving Continuity in continuous beams - Concordant cable and linear transformation - Calculation of stresses -Principles of design.

Basic assumptions for calculating flexural stresses - Permissible stresses in steel and concrete as per IS 1343 Code -Design of sections of Type I and Type II post -tensioned and pre -tensioned beams - Check for strengthlimit state based on IS 1343 Code - Layout of cables in post-tensioned beams - Location of wires in pre- tensioned beams - Design for

Factors influencing deflections - Short term deflections of uncracked members - Prediction of long term deflections due to creep and shrinkage - Check for serviceability limit state of deflection. Determination of anchorage zone stresses in post-tensioned beams by Magnel's method, Guyon's method and IS 1343 code - Design of anchorage zone

UNIT V

MISCELLANEOUS STRUCTURES

Design of compression members and tension members - Circular prestressing - Water tanks - Pipes - Analysisand design - IS Codal provisions.

22CE003 STRUCTURAL DYNAMICS AND EARTHQUAKE ENGINEERING

Course Objectives

- To impart knowledge on the theory of vibration and basics of structural dynamics.
- To impart the design philosophy of earthquake resistant design of structures.
- To create awareness on the use of codal provisions for aseismic design of structures.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze vibratory systems using principles of dynamics.
- 2. Analyze seismic phenomena and earthquake parameters to assess structural responses.
- 3. Analysis of the RC building by Equivalent static analysis.
- 4. Apply earthquake-resistant design principles to enhance structural performance.
- 5. Evaluate and implement retrofitting techniques to enhance structural integrity.

Articulation Matrix

UNIT I

PRINCIPLES OF DYNAMICS

INTRODUCTION TO EARTHOUAKE ENGINEERING

UNIT II

vibrations.

Elements of engineering seismology - Causes of earthquakes - Seismic waves - Magnitude - Intensity and Energy release - Indian seismology - Earthquake history - Catastrophes - Failures - Lessons learnt from past earthquakes -Seismic zone map of India - Estimation of Earthquake Parameters, Microzonation - Strong ground motion characteristics.

Vibration studies - Elements of vibratory systems and simple harmonic motion - Vibration with and without damping -D"Alembert"s principle - Degree of freedom: Equation of motion for S.D.O.F - Damped and undamped free forced

UNIT III

SEISMIC DESIGN OF BUILDINGS

Idealization of building frames - Methods of seismic analysis - Equivalent static analysis - IS 1893 provisions - Design horizontal seismic coefficient - Design base shear distribution - Seismic resistant design of buildings

UNIT IV

EARTHQUAKE RESISTANT STRUCTURES

Earthquake resistant properties of materials - Lateral force resisting systems - Strong column weak beam - Guidelines for seismic-resistant construction - Building configuration requirements - Ductile detailing of reinforcements in RC buildings - Behavior masonry structures - Behaviour of tall buildings under seismic andwind conditions.

UNIT V

REPAIRS AND RETROFITTING

Code of practices for repairs and retrofitting - Retrofitting of RC buildings and structural elements - Techniques of retrofitting - Improving structural integrity of masonry buildings - Tuned Mass Dampers - Retrofitting by seismic isolation - Case studies.

22CE004 BRIDGE ENGINEERING

3003

Course Objectives

 \square

- To learn the components, classification and importance of bridges.
- □ To familiarize students about prefabrication, erection methods, and the use of innovative materials.in bridge construction.
 - To know about the software tools and technologies used in bridge design and analysis.

Programme Outcomes (POs)

PO1Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations. PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and culturalissues and the consequent responsibilities relevant to the professional engineering practice.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze bridge components and site selection criteria to ensure structural stability.
- 2. Evaluate the specifications of road bridges.
- 3. Analyze the general design considerations and structural elements of various bridge types.
- 4. Analyze the various bridges-piers and abutments.
- 5. Examine the significance of bearings and joints in bridge structures

5	1	-	-	2	3	-	-	-	-	-	-	-	1	1

Articulation Matrix

UNIT I

INTRODUCTION

Components of Bridges - Classification - Importance of Bridges - Investigation for Bridges - Selection of Bridge site - Economical span - Location of piers and abutments - Subsoil exploration - Scour depth - Traffic projection - Choice of bridge type

UNIT II

SPECIFICATION OF BRIDGES

Specification of road bridges - width of carriageway - loads to be considered - dead load - IRC standard liveload - Impact effect.

UNIT III

DESIGN OF BRIDGES

General design considerations - Slab Bridge - Design of T-beam bridge - Prestressed concrete bridge - continuous bridge - Arch Bridge - Box girder bridge decks.

UNIT IV

ANALYSIS OF BRIDGES

Evaluation of sub structures - Pier and abutments caps - Design of pier - Abutments - Type of foundations.

UNIT V

BEARING AND JOINTS OF BRIDGES

Importance of Bearings - Bearings for slab bridges - Bearings for girder bridges - Electrometric bearing -Joints - Expansion joints. Construction and Maintenance of bridges - Lessons from bridge failures.

22CE005 TALL STRUCTURES

Course Objectives

- $\hfill\square$ To provide students with a comprehensive understanding and concepts related to the design and construction of tall structures
- To equip students with the skills to analyze the structural behavior of tall buildings under various loads and conditions
- To introduce students to the software tools and technologies used in the design and analysis of tall structures, including finite element analysis and building information modelling (BIM).

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization of complex engineering problems.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Design the tall building based on different load conditions
- 2. Analyze the shear wall and load bearing wall panel systems
- 3. Analyze the structural behavior of high-rise buildings under load
- 4. Design and analysis of Composite Buildings and High Rise Structural Systems
- 5. Analyze of High Rise Suspension Systems and Pneumatic High Rise Buildings

Articulation Matrix

UNIT I

INTRODUCTION

Tall Building in the Urban Context -Tall Building and its Support Structure -Development of High Rise Building Structures - General Planning Considerations.Dead Loads - Live Loads-Construction Loads - Snow, Rain, and Ice Loads - Wind Loads-Seismic Loading, Water and Earth Pressure Loads - Loads - Loads Due to Restrained Volume Changes of Material - Impact and Dynamic Loads - Blast Loads - Combination of Loads.

UNIT II

THE VERTICAL STRUCTURE PLANE

Dispersion of Vertical Forces- Dispersion of Lateral Forces - Optimum Ground Level Space - Shear Wall Arrangement - Behaviour of Shear Walls under Lateral Loading.Floor Structure or Horizontal Building Plane Floor Framing Systems-Horizontal Bracing- Composite Floor Systems-High - Rise Building as related to assemblage Kits Skeleton Frame Systems - Load Bearing Wall Panel Systems - Panel Frame Systems - Multistory Box Systems.

9 Hours

9 Hours

3003

UNIT III

COMMON HIGH-RISE BUILDING STRUCTURES AND THEIR BEHAVIOUR UNDER LOAD

Bearing Wall Structure-Shear Core Structure - Rigid Frame Systems- The Wall - Beam Structure: Interspatialand Staggered Truss Systems - Frame - Shear Wall Building Systems - Flat Slab Building Structures - Shear Truss - Frame Interaction System with Rigid - Belt Trusses - Tubular Systems-Composite Buildings - Comparison of High - Rise Structural Systems Other Design Approaches Controlling Building Drift Efficient Building Forms - The Counteracting Force or Dynamic Response.

UNIT IV

APPROXIMATE STRUCTURAL ANALYSIS AND DESIGN OF BUILDINGS

Approximate Analysis of Bearing Wall Buildings -Cross Wall Structure -Long Wall Structure The Rigid Frame Structure Approximate Analysis for Vertical Loading - Approximate Analysis for Lateral Loading - Approximate Design of Rigid Frame Buildings-Lateral Deformation of Rigid Frame Buildings Rigid Frame - Shear Wall Structure - Vierendeel Structure -Hollow Tube Structure.

UNIT V

ADVANCES IN RAILWAYS

Introduction to modern trends in Indian Railways in the design of high speed tracks - Modern trends in railwaytrackalignment -Railways for Urban area - LRT & MRTS - Mono Rail - Metro Rail - Hyper loop- Recent developments in railway projects.

22CE006/22CEH06 STRUCTURAL HEALTH MONITORING

Course Objectives

- To introduce the concepts involved in the assessment, evaluation and technical diagnosis of different structural systems of strategic importance
- To impart knowledge on both elementary and advanced applications of SHM with case studies

• To familiarize students with the different components of SHM systems, including sensors, data acquisition systems, communication networks, and data processing techniques

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze the importance and challenges of Structural Health Monitoring
- 2. Analyze static and dynamic properties of materials using SHM methods
- 3. Analyze the damage prediction in different materials using NDT
- 4. Evaluate the role of sensor technologies, data acquisition, and AI in Structural Health Monitoring
- 5. Apply the SHM techniques in different types of structures

Articulation Matrix

22CE007 DESIGN OF TIMBER AND MASONRY ELEMENTS

Course Objectives

- To impart basic knowledge on the application and maintenance of timber structures.
- To outline the design aspects of timber and masonry structures.
- To illustrate the need of timber and masonry structures.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts,

anddemonstrate the knowledge of, and need for sustainable development.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-longlearningin the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a widerange of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze the strength factors, permissible stresses, and load calculations for timber structures
- 2. Evaluate the design consideration of various timber elements.
- 3. Analysis and design of masonry columns for axial and eccentric loading conditions
- 4. Design of different types of masonry walls.
- 5. Apply the IS 2185 standard to design and construct hollow block masonry walls.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

5	3	2	2	-	-	-	-	-	-	-	-	3	-	-

UNIT I

CONCEPTS OF TIMBER STRUCTURES

UNIT II DESIGN OF TIMBER STRUCTURES

materials - Masonry, timber, concrete and steel - Maintenance of Timber Structure.

Design of beams for strength and stiffness as per BIS code - Design of rectangular beams - Design of tensionmembers -Design of compression members of solid and box sections - Types of joints with nails and bolts - Design of bolted and nailed connections - Design of timber joists - Allowable stresses in tension, compressionand flexure.

Factors affecting strength of timber - Permissible stresses - Bearing stress -Types of loads - Dead load - Live load -Wind load - earthquake load - Load Calculation for design as per codal provisions - Choice between different structural

UNIT III

DESIGN OF BRICK MASONRY COLUMN

Mix proportions - Compressive strength of mortars - Shape factor for masonry units - Stability of piers and walls -Design as per IS Codes - Design of permissible compressive stresses in masonry - Design of masonrycolumn subjected to axial and eccentric loading.

UNIT IV

DESIGN OF MASONRY WALL

Types of walls - Design of solid load bearing wall for axial loads - Design of solid load bearing wall for eccentric loads - Design of wall with opening - Design of cavity wall - Design of stiffened and unstiffened wall.

UNIT V

DESIGN OF CONCRETE BLOCK MASONRY

Concrete blocks - Lightweight blocks - AAC Blocks - Hollow Blocks as per IS 2185 - Manufacturing of Hollow Blocks - Tests on Hollow Blocks - Design and Construction of Hollow Block Masonry Walls.

22CE008 ADVANCED RC DESIGN

Course Objectives

- To impart knowledge on the limit state design of RC Structural components
- To enhance the confidence level of students to design the special structural elements as per Indianstandard code of practices.
- To introduce students to the design and analysis of prestressed concrete elements, covering bothpretensioning and post-tensioning techniques.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Design and detailing of special RC elements
- 2. Analysis of RC slab using yield line theory and design of flat slab and grid floor
- 3. Design of RC beam for serviceability conditions and design of column as per IS 456
- 4. Design of RC walls and concepts of ductile detailing
- 5. Evaluate the RC section with moment redistribution and ultimate load analysis

Articulation Matrix

UNIT I

9 Hours

SPECIAL STRUCTURAL MEMBERS

Design of RC beams: continuous beams, Curved beams and Deep beams - Design of Corbels.

UNIT II

DESIGN OF SLABS AND YIELD LINE THEORY

Assumptions - Yield line patterns for various types of slabs with different boundary conditions - Yield line theory of slabs - Virtual work method - Equilibrium methods - Hillerborg method of design. Design of flat slabs - Design of grid floors as per I.S.456.

UNIT III

LIMIT SATATE OF SERVICEABILITY

Parameters considered in limit state of serviceability - Short term deflection - long term deflection - Calculation of deflections in beams under working loads - Calculation of crack width in beams

UNIT IV

DESIGN OF RC WALL AND DUCTILE DETAILING

Design of RC walls - Shear walls. Concepts of ductility- Factors influencing ductility - Design principles and codal provisions.

UNIT V

ULTIMATE LOAD ANALYSIS AND INELASTIC BEHAVIOUR

Whitney"'s theory - Ultimate load analysis - Moment redistribution and moment rotation characteristics of a R.C. section - Plastic hinges check for rotation capacity of sections. Concept of moment - rotation curves.

Total: 45 Hours

22CE009 ADVANCED STEEL DESIGN

3003

Course Objectives

- To impart knowledge on the complex steel structures design
- To introduce the concept of cold formed steel design.
- To know the methodologies for designing advanced steel elements, including beams, columns, trusses, frames, and connections.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze and design structural components combined bending and axial load
- 2. Design plate girders and composite beams and its components
- 3. Compute the suitable section dimension of a gantry girder
- 4. Analyze and design roof truss and its components
- 5. Differentiate the cold formed steel and normal steel constructions

Articulation Matrix

UNIT I

DESIGN OF BEAM-COLUMNS

Introduction to plate girder - Elements of plate girder - IS 800-2007 codal provisions Preliminary design considerations - concept of Tension field action - design of end panels. Design of plate girder using IS 800- 2007- Design of vertical stiffeners - design of longitudinal stiffeners - design of torsional stiffeners - Introduction to steel plate shear wall.

UNIT II

DESIGN OF PLATE GIRDER

UNIT III

DESIGN OF PLATE GIRDER

Introduction - loading consideration - maximum load effect - Selection of Gantry girder - Design of gantrygirders for primary loads only

- design of longitudinal stiffeners - design of torsional stiffeners - Introduction to steel plate shear wall.

Introduction to plate girder - Elements of plate girder - IS 800-2007 codal provisions Preliminary design considerations concept of Tension field action - design of end panels. Design of plate girder using IS 800- 2007- Design of vertical stiffeners

UNIT IV

DESIGN OF INDUSTRIAL STRUCTURES

Introduction - analysis and design of truss members - Design of gable portal frame - analysis and design of Gantry girder columns - pre-engineered buildings - advantages and design principles

UNIT V

COLD FORMED STEEL

Introduction - advantages of Cold formed steel sections - Types of Stiffened and Unstiffened Elements -local buckling lateral buckling - empirical methods - z purlins - design rules

Total: 45 Hours

22CE010 INDUSTRIAL STRUCTURES

3003

Course Objectives

- To impart knowledge on classification of industries and their functional requirements
- To familiarise the students on the design of silos, bunkers and chimneys
- To impart knowledge on the transmission structures

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learningin the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Plan industrial structures by considering classification, specific industry requirements
- 2. Demonstrate the functional requirements for any industry
- 3. Design of industrial RC and steel structures
- 4. Design Foundation for industries
- 5. Analyze the materials in pre-engineered concept

UNIT I

9 Hours

PLANNING

Classification of Industries and Industrial Structures -Specific requirements for Industries like Engineering, Textiles, Chemicals, steel and cement. Site layout and external facilities required

Natural and artificial lighting - Electrical wiring fixtures - Electrical installations - substations - Effluent disposal - Fire

expanse and chutes - fire alarm, extinguishers and hydrants - Guidelines from factories act. Heating and Ventilation -Air conditioning

UNIT III

INDUSTRIAL BUILDINGS

Design and detailing of bunkers, silos, chimneys, Gantry Girders-principles of folded plates and shell roofs

UNIT IV

FOUNDATION FOR INDUSTRIAL STRUCTURES

Types of Machine Foundations and their design-Foundations for RC and steel chimneys

UNIT V

PRE ENGINEERED BUILDINGS

Introduction-Advantages and Disadvantages-Primary and secondary structural elements-foundation- wall materialsmetal roofing

22CE011 FINITE ELEMENT ANALYSIS

3003

Course Objectives

- To impact basic knowledge on the various steps involved in finite element analysis
- To introduce various types of one two three dimensional elements
- To apply FEA to structural analysis problems, including static, dynamic, and stability analyses of various structural components and systems.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learningin the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze the Finite Element Analysis (FEA) process
- 2. Evaluate finite element properties, including isoparametric formulation
- 3. Analyse Truss and beam members by Finite element Method
- 4. Analyse one and two dimensional members
- 5. Analyse the special parameters of the structures

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

5	-	2	1	-	-	-	-	-	-	-	-	1	1	1

UNIT I

INTRODUCTION

Introduction - Basic Concepts of Finite Element Analysis - Introduction to Elasticity - Steps in Finite Element Analysis - Virtual Work and Variational Principle - Galerkin Method- Finite Element Method: Displacement Approach - Stiffness Matrix and Boundary Conditions

UNIT II

ELEMENT PROPERTIES

Natural Coordinates - Triangular Elements - Rectangular Elements - Lagrange and Serendipity Elements - Solid Elements - Isoparametric Formulation - Stiffness Matrix of Isoparametric Elements Numerical Integration: One, Two and Three Dimensional

9 Hours

UNIT III

ANALYSIS OF STRUCTURES BY FEM

Stiffness of Truss Members - Analysis of Truss - Stiffness of Beam Members - Finite Element Analysis of Continuous Beam - Plane Frame Analysis - Analysis of Grids.

UNIT IV

FEM FOR TWO AND THREE-DIMENSIONAL STRESS ANALYSIS

Constant Strain Triangle - Linear Strain Triangle - Rectangular Elements - Numerical Evaluation of ElementStiffness - Computation of Stresses, Geometric Nonlinearity and Static Condensation - Axisymmetric Element

- Finite Element Formulation of Axisymmetric Element - Finite Element Formulation for 3 DimensionalElements

UNIT V

OTHER APPLICATIONS OF FEM

Fluid flow analysis - vibration analysis - Eigen Values and Eigen Vectors used for fluid analysis in pipes -Elastic Stability analysis - Plate bending problem

22CE012 STEEL CONCRETE COMPOSITE STRUCTURES

Course Objectives

- □ To develop an understanding of the behaviour and design procedure of steel concrete compositeelements and structures.
- □ To provide students with a comprehensive understanding of the principles, concepts, and significance of steel-concrete composite structures in modern construction.
- □ To give an exposure on case studies related to steel-concrete composite construction

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Design effective shear connector applications for optimal performance.
- 2. Design the composite beam and column
- 3. Apply the studs in Roofs and Slabs and predict the cracking pattern
- 4. Analyse the various bridges and design the economical one
- 5. Analyze case studies on steel-concrete composite construction

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

5	2	2	2	-	-	-	-	-	-	-	-	-	1	1

UNIT I

INTRODUCTION

Introduction to steel concrete composite construction advantages Theory of composite structures Introduction to steel Concrete Steel sandwich construction shear connectors Types characteristics and applications.

UNIT II

DESIGN OF COMPOSITE BEAMS AND SLABS

Elastic Behaviour of composite beams and slabs - Design of composite beams including shear connector -Design of studs - Partial shear - Concrete cracking - Practical considerations - Cost implications

9 Hours

9 Hours

3003

UNIT III

COMPOSITE COLUMNS AND TRUSSES

Composite columns Types Materials advantages method of design Composite Trusses AnalysisConfigurationStud shear connectors Design consideration Cost implications

UNIT IV

COMPOSITE BRIDGES

Introduction - design of composite bridge deck - Composite box girder bridges - Behaviour of compositeboxgirder bridges - Design concepts

UNIT V

CASE STUDIES

Case studies on steel - Concrete composite construction -Seismic behaviour of composite structures -Failureof Steel-Concrete composite components/Structure.

22CE013 BUILDING SERVICES

3003

Course Objectives

- □ To understand how a building can be made comfortable and safe with the services designed and installed.
- □ To impart knowledge on basics of electrical wiring system.
- \Box To recognize the importance of fire detection and protection.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-longlearningin the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a widerange of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze the features of service machineries required for a building.
- 2. Evaluate electrical systems in buildings to design safe and efficient electrical layouts.
- 3. Analyze the design strategies for lighting in various building types, and to develop efficient lighting solutions.
- 4. Evaluate refrigeration principles and air conditioning systems for building services.
- 5. Analyze the characteristics of fire safety equipment for different types of buildings

UNIT I

9 Hours

ELEVATORS AND CONVEYORS

Elevators - Lifts and Escalators - Special features required for physically handicapped and elderly people - Conveyors - Types of conveyors - Horizontal moving walkways - Design criteria, speed size, capacity, number.

UNIT II

ELECTRICAL SYSTEMS IN BUILDINGS

Basics of electricity - Single / Three phase supply - Motors and generators - Protective devices in electrical installations - Types of wires - Electrical wiring systems in domestic and commercial buildings – Electrical wiring layout for building - Earthing - Types of earthing - ISI specifications - Main and distribution boards - Substations - Lightning arrester.

UNIT III

PRINCIPLES OF ILLUMINATION

Visual tasks - Factors affecting visual tasks - Modern theory of light and colour - Synthesis of light - Additive and subtractive synthesis of colour - Laws of illumination - Classification of lighting - Artificial light sources - Spectral energy distribution - LED lightings - Daylight factor - Design of modern lighting - Lighting for stores, offices, schools, hospitals and house lighting - Special features required for physically handicapped and elderly in

UNIT IV

REFRIGERATION PRINCIPLES

Thermodynamics - Refrigerants - Vapour compression cycle - Compressors - Evaporators - Refrigerant Control devices - Cooling towers - Starters - Air handling units - Water piping - Vapour Absorption Machine(VAM) - Window type and packaged air conditioners - Air conditioning systems for different types of buildings - Protection against fire to be caused by A.C. systems.

UNIT V

FIRE SAFETY INSTALLATION

Fire resistant construction materials - Safety regulations as per NBC - Planning considerations in buildings - Fire escapes systems - Heat and smoke detectors - Automatic sprinklers - Fire Fighting pump and water storage - Fire hydrants - Dry and wet risers.

22CE014/22CEH14 CONCEPTUAL PLANNING AND BYE LAWS

Course Objectives

- □ To provide a broad exposure to the students about the concepts of Planning necessary in Civil Engineering practice
- □ To make the students familiar with National Building Code of India and other relevant codes for the functional design of residential and industrial buildings
- □ To provide a broad exposure to the students about the city planning and tender process

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze geometrical design principles, and develop building designs
- 2. Analyze government approval procedures for building projects and develop plans that meet site approval.
- Evaluate the functional design of residential, commercial, and industrial buildings, ensuring compliance with NBC 2016
- 4. Evaluate zoning regulations and FSI computations, and develop strategic urban development plans for diverse sectors
- 5. Develop comprehensive tender documents for civil engineering projects

Articulation Matrix

UNIT I

CIVIL ENGINEERING PROJECTS

Introduction- Consideration for a good project -Project Personnel - Contacts- Geometrical design of buildings-National Building Code (NBC) Specifications for various buildings.

UNIT II

GOVERNMENT APPROVAL PROCEDURES

Requirements for site approval - Application for planning - Permission and building permit - Boundaries setbacks for domestic and high rised buildings -Provision for differently abled, elderly and children - Requirements of a plan -Inspection procedures- Plan sanction - Limitations - Cancellation of permit - Demolition of buildings - Renewal of permit 9 Hours

UNIT III

FUNCTIONAL DESIGN OF BUILDINGS

Introduction -Functional design of Residential, Commercial and Industrial buildings - Rules and regulations as per National Building Code of India (NBC 2016) - Fire safety of high rise and commercial buildings (NBC 2016) -Evaluation

UNIT IV

CITY PLANNING

Urban development - Zoning - Regulations - Requirements for City planning - Spaces excluded from FSI and coverage computation - Special character areas - Planning for apartments industrial and institutional sectors - Delegation of powers

UNIT V

TENDER PROCESS IN INDIA

Bids Tenders and proposals - Government Tender process - Contracts - Types of Tenders - E - Tendering - System of working - Guidelines and procedures - Government and private sectors - Preparation of tender documents - Big Civil Engineering Construction Companies in India

22CE015/22CEH15 COST EFFECTIVE CONSTRUCTION ANDGREEN BUILDING

Course Objectives

- To impart knowledge on different concepts of sustainable design and cost effective methods to best fit for a specific construction project.
- To expose the concept of green building techniques for the construction project.
- To impart knowledge on green practices and rating systems

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineeringspecialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reachingsubstantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-longlearningin the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a widerange of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate the sustainability and performance of cost-effective construction materials
- 2. Analyze cost-effective building technologies and develop innovative structural solutions for sustainable and efficient construction
- 3. Evaluate life cycle costs to enhance sustainability in building construction
- 4. Evaluate lifecycle design strategies for sustainable development
- 5. Apply the process of green energy in buildings and know the rating systems.

UNIT I

9 Hours

3003

INTRODUCTION TO COST EFFECTIVE CONSTRUCTION MATERIALS

Cost effective construction materials - Stone and Laterite blocks - Burned Bricks -Fly ash blocks - Concreteblocks - Geopolymer concrete - Stabilized mud blocks - Lime - Pozzolana cement - Gypsum board - Bamboo - Lightweight construction materials - Natural and synthetic fibres - Recycling of building materials.

Lightweight construction materials - Natural and synthetic fibres - Recycling of building materials.

UNIT II **COST EFFECTIVE METHODS**

Cost effective building technologies - Wall construction - Rat trap bond - Cavity wall - Ferro cement and Ferroconcrete constructions - Alternative beams, columns and roofing Systems - Door and window frames - Filler slab - Composite beam and panel Roof - Pre-engineered building elements.

UNIT III

GREEN BUILDING DESIGN

Contribution of buildings towards global warming - Environmental benefit - Health and social benefits - Major energy efficient areas for buildings - Embodied energy in materials - Green materials and design - Comparisonof initial cost of green building V/s conventional building - Life cycle cost of buildings.

UNIT IV

GREEN ENERGY AND SUSTAINABLE DEVELOPMENT

Solar energy - Wind energy - Design for sustainability - Sustainable structure and Green Building - Principles of sustainable development in building design - Characteristics of sustainable buildings- Sustainably managed materials -Integrated lifecycle design of materials and structures.

UNIT V

GREEN PRACTICES AND RATING SYSTEMS

Renewable energy Controlling the water cycle Impact of materials on the environment Optimizing Construction Site Management Environmental management of buildings - Green Building Evaluation SystemsLEED Certification and GRIHA Green Globe Certification Case studies.

22CE016/22CEH16 PREFABRICATED STRUCTURES AND PRE-ENGINEERED BUILDING

Course Objectives

- □ To impart knowledge on prefabricated elements and the technologies used for fabrication and erection
- \square To impart knowledge on the applications of prefabricated elements in construction
- □ To make students to get exposure on design principles and erection technologies

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate prefabrication principles, materials, and structural systems to enhance construction efficiency and modular coordination
- 2. Analyze the behavior and types of prefabricated structural components to optimize construction efficiency and performance
- 3. Evaluate production and hoisting technologies for precast elements to enhance efficiency in manufacturing, transportation, and erection
- 4. Apply the design principles and detailing of precast units to ensure structural integrity and resilience against abnormal effects
- 5. Evaluate the design procedures and applications of pre-engineered buildings in comparison to conventional steel structures.

UNIT I

9 Hours

3003

INTRODUCTION

Need for prefabrication - Principles - Materials - Types of Prefabrication - Prefabrication systems and Structural schemes - Modular co-ordination - Prefabrication of load-carrying members - Disuniting of structures

UNIT II

PREFABRICATED COMPONENTS

Behaviour and types of structural components - Large panel systems - Roof and floor panels -Ribbed floor panels - Wall panels - Footings - Beams and Columns - Shear walls - Joints for different structural connections - Effective sealing of joints for waterproofing - Provisions for non-structural fastenings.

UNIT III

PRODUCTION AND HOISTING TECHNOLOGY

Production - Planning of production setup - Manufacturing methods - Stationary and mobile production - Organizing of production - Shuttering and mould design - Storage of precast elements - Dimensional tolerances. Equipment for hoisting and erection - Transportation and Erection - Erection of R.C.Structures - Beams, Slabs, Wall panels and Columns.

UNIT IV

DESIGN PRINCIPLES

Designing and detailing of precast unit for factory structures - Purlins, Principal rafters, roof trusses, lattice girders, gable frames - Equivalent design loads for considering abnormal effects such as earthquakes, cyclones, etc - Importance of avoidance of progressive collapse.

UNIT V

PRE - ENGINEERED BUILDINGS

Pre- Engineered Buildings Vs Conventional Steel Buildings - Design procedure of Pre- Engineered Buildings - Applications.

22CE017/22CEH17 ENERGY EFFICIENT BUILDINGS

Course Objectives

- □ To learn the green buildings concepts applicable to alternate design and to incorporate renewableenergy systems in buildings
- □ To acquire knowledge on landscape and Heating, Ventilation and Air conditioning in Buildings
- □ To impart knowledge on Eco friendly building concepts

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate energy-efficient building design aspects and resource-criticality in modern living while considering codal provisions
- 2. Evaluate energy-efficient landscape design and building envelopes to optimize heat gain, heat loss, and overall building performance
- 3. Analyze HVAC strategies, including passive and hybrid methods, to optimize energy conservation and thermal performance in buildings
- 4. Assess heat transmission in buildings to enhance thermal performance through optimized design and computational analysis.
- 5. Examine passive cooling techniques and renewable energy integration to enhance building efficiency and sustainability

22CE018 CONSTRUCTION MANAGEMENT AND SAFETY

3003

Course Objectives

- □ To study and understand the concept of planning and scheduling process of construction practices
- □ To make students to understand the concept of planning and cost control monitoring and accounting
- □ To impart knowledge on construction safety and safety in handling the equipment's for construction.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Examine construction project management principles, life cycle stages, and managerial responsibilities to identify best practices and causes of project failure
- 2. Apply the scheduling techniques for planning construction projects.
- 3. Analyze the cost control, monitoring methods and quality control.
- 4. Examine construction safety practices, hazard prevention measures, and legal implications to enhance workplace safety and project efficiency
- 5. Assess safety measures in handling construction equipment to mitigate risks and ensure compliance with OSHA standards

Course Objectives

- □ To understand the principles, applications, and design procedures for various ground improvement techniques.
- Gain competence in properly evaluating alternative solutions, and the effectiveness before, during and after using ground improvement.
- □ To understand the stabilization process using admixtures and grouting

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Understand the impact of the professional engineering solutions in societal and environmental contexts, anddemonstrate the knowledge of, and need for sustainable development.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate ground improvement techniques and mechanical stabilization methods to enhance soil properties for construction suitability.
- 2. Assess dewatering techniques and hydraulic modifications to optimize soil stability and construction feasibility.
- 3. Evaluate stabilization techniques using admixtures to enhance soil properties for improved construction performance
- 4. Assess grouting techniques and material selection to enhance soil stability and structural integrity
- 5. Evaluate geosynthetic applications in ground improvement to enhance soil stability, filtration, and reinforcement in construction.

UNIT I

9 Hours

3003

NECESSITY OF GROUND IMPROVEMENT AND MECHANICAL STABILIZATION

Different types of problematic soils - Need for Ground Improvement - Emerging trends in ground Improvement - Mechanical stabilization - Principles and methods of shallow and deep soil compaction - Vibro replacement and Vibro compaction - Dynamic compaction - Properties of compacted soil and compaction control.

Hydraulic modification - Drainage techniques - Well points - Deep well, preloading, vertical drains, vacuum consolidation, Electro kinematic dewatering - Design of dewatering systems.

UNIT III

STABILIZATION BY ADMIXTURES

using industrial wastes - Methods of applications in the field - Stabilization of expansive clays.

UNIT IV

UNIT V

STABILIZATION BY GROUTING Types of grouts and grouting techniques - Grouting equipment and machinery - Injection methods - Grout monitoring -Selection of grout - Design aspects.

GEOSYNTHETICS IN GROUND IMPROVEMENT Concept of reinforcement - Geo synthetics - Types, functions and applications - Stability analysis of geo grid reinforced earth retaining wall - Internal and External - Application of Geotextiles as filtration, drainage and separation in the pavement works - Soil nailing.

22CE020 GEOENVIRONMENTAL ENGINEERING

Course Objectives

- □ To impart knowledge on the Geotechnical engineering problems associated with soil contamination,
- \Box To understand the measures on safe disposal of waste
- □ To make students aware about remediate the contaminated soils by different techniques thereby protecting environment

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and culturalissues and the consequent responsibilities relevant to the professional engineering practice.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a widerange of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate soil-pollutant interactions to assess contamination effects and develop geo-environmental engineering solutions
- 2. Analyze contaminant transport mechanisms and site characterization methods to assess subsurface pollution and remediation strategies.
- 3. Evaluate waste containment and remediation techniques to develop effective solutions for contaminated site management.
- 4. Design the cover system by identifying the suitable components of landfill
- 5. Analyze the possible utilization of waste based on their characteristics

Articulation Matrix

UNIT I

SOIL POLLUTANT INTERACTION

Role of Geo-Environmental Engineering - sources, generation and classification of wastes- causes and consequences of soil pollution -factors influencing soil-pollutant interaction-modification of index- physical, chemical and engineering properties

9 Hours

3003

UNIT II

CONTAMINANT TRANSPORT AND SITE CHARACTERISATION

Transport of contaminant in subsurface - advection, diffusion, dispersion - chemical process in subsurface - sorption, desorption, precipitation, dissolution, oxidation, complexation, ion exchange, volatization - biological process in subsurface - characterization of contaminated sites

UNIT III

WASTE CONTAINMENT AND REMEDIATION OF CONTAMINATED SITES

In situ containment - vertical and horizontal barrier - soil remediation - soil vapour extraction, electro kinetic remediation, soil heating, vitrification, bioremediation, phyto remediation - ground water remediation -pumpand treat, In situ flushing, permeable reacting barrier

UNIT IV

LAND FILLS AND SURFACE IMPOUNDMENTS

Site selection for landfills - Components of landfills - liner system - soil, geomembrane, geosynthetic clay, geocomposite liner system - leachate collection-construction and operation of landfill-landfill cover -disposal of slurry waste in ponds and impoundments

UNIT V

UTILIZATION OF WASTE

Evaluation of waste materials- flyash, municipal sludge, plastics, scrap tire, blast furnace slag - physical, chemical and biological characteristics-geotechnical reuse of waste materials

22CE021 INTRODUCTION TO GEOTECHNICAL EARTHQUAKE ENGINEERING

3003

Course Objectives

- □ To impart knowledge on dynamic properties of the soil.
- \Box To make better understanding about seismic hazard analysis.
- □ To make students aware about evaluation of liquefaction potential of the soil.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reachingsubstantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO4 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO5 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and culturalissues and the consequent responsibilities relevant to the professional engineering practice.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate seismic activity and earthquake mechanisms to enhance understanding of Earth's internal dynamics and structural impacts.
- 2. Analyze the dynamic properties of soils using field and laboratory testing methods to assess soil behavior under seismic loads.
- 3. Evaluate the seismic hazard by deterministic approach
- 4. Assess liquefaction hazards and susceptibility criteria to evaluate soil stability under seismic loading
- 5. Evaluate the liquefaction potential by different methods

UNIT I

9 Hours

SEISMOLOGY

Internal Structure of the Earth - Continental Drift and Plate Tectonics - Faults - Elastic rebound theory - Different sources of Seismic Activity - Geometric Notation - Location of Earthquakes - Size of Earthquakes

UNIT II

DYNAMIC PROPERTIES OF SOILS

Measurement of Dynamic Properties of soils - Field Tests - Low strain - Seismic Reflection - Seismic Refraction -Horizontal layering - Steady-State Vibration - Spectral analysis of surface wave - Seismic cross hole - Down Hole -Uphole tests - Laboratory tests - Resonance Column Test - Bender Element.

UNIT III

SEISMIC HAZARD ANALYSIS

Identification and Evaluation of Earthquake Sources - Geologic Evidence - Tectonic Evidence - HistoricalSeismicity - Instrumental Seismicity - Deterministic Seismic Hazard Analysis

UNIT IV

LIQUEFACTION

Liquefaction - Flow liquefaction - Cyclic Mobility - Evaluation of liquefaction Hazards - LiquefactionSusceptibility Criteria - Historical, Geological and Compositional State.

UNIT V

EVALUATION OF LIQUEFACTION POTENTIALMENT

Evaluation of Initiation of Liquefaction - Cyclic stress approach - Characterization of Liquefaction Resistance - SPT Test - Various correction factor - Factor of Safety.

22CE022 REINFORCED SOIL STRUCTURES

3003

Course Objectives

- \Box To make the students gain adequate knowledge on reinforced soil structures.
- □ To impart knowledge on principles and design of reinforced soil structures
- □ To make students aware about geosynthetics in environmental geotechnics and guidelines

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Recognize the need for, and have the preparation and ability to engage in independent and life-long learningin the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze reinforced earth systems, material properties, and soil-geosynthetic interactions for effective ground improvement
- 2. Design the geotextiles, geogrids, geonets, geomembranes used reinforced earth.
- 3. Design the soil nailing and geocomposite used reinforced earth.
- 4. Apply the Reinforced earth technique in civil engineering
- 5. Apply the Geosynthetics in Environmental Geotechnics

22CE023 ROCK MECHANICS AND APPLICATIONS

3003

Course Objectives

- □ To impart knowledge on fundamentals of rock mechanics
- □ To make students aware about application in solving simple problems associated with rock slopesand underground openings.
- □ To impart knowledge on the mechanics of rock and its applications in underground structures and rock slope stability analysis.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reachingsubstantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze rock classification systems and physico-mechanical properties to assess geotechnical suitability and stability
- 2. Evaluate the behaviour of rock under different loading condition
- 3. Analyze in-situ stress measurement techniques and their impact on underground excavation stability
- 4. Evaluate the bearing Capacity of foundations on rocks
- 5. Evaluate rock reinforcement techniques, including shotcreting, bolting, and grouting, to enhance stability in fractured rock masses

Articulation Matrix

UNIT I

9 Hours

CLASSIFICATION OF ROCKS

Types of Rocks – Physico mechanical properties of rocks - Field and Laboratory tests for physical and mechanical properties- Classification of rock masses - the value of RMR and ratings - Field estimations - NewAustralian Method

UNIT II

STRENGTH CRITERIA OF ROCKS

Joint characteristics - Planes of weakness - Stress-strain behavior of intact rock and rock mass under hydrostatic compression and deviatoric loading - Modes of rock failure - Mohr-Coulomb failure criterion and tension cut-off - Hoek Brown failure criterion.

UNIT III

INSITU STRESSES IN ROCKS

In-situ stresses - Strain gauge Rosette and stress measurement techniques - Methods - Hydraulic fracturing, flatjack, over coring and under coring methods - Stress around the underground excavation - Zone of influence

UNIT IV

SLOPE STABILITY AND BEARING CAPACITY OF ROCKS

Rock slopes and slope failures - Types and role of discontinuities - Slope analysis and factor of safety -remedial measures for critical slopes - Bearing Capacity of foundations on rocks

UNIT V

ROCK REINFORCEMENT

Reinforcement of fractured and joined rocks - shotcreting, bolting, anchoring, grouting - stress transfermechanism, types and installation methods.

9 Hours

9 Hours

To understand lateral earth pressure theories and pressure theories and design of retaining walls.

To understand pressure envelops and design of various components in braced cuts and

To understand stability of earth dams and its protection and construction.

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

Course Objectives

cofferdams.

Programme Outcomes (POs)

•

•

•

- 1. Analyze earth dam design, seepage control methods, and slope protection techniques to ensure structural stability and performance.
- 2. Analyze the basics of lateral earth pressure with retaining wall types.

22CE024 EARTH RETAINING STRUCTURES

To design anchored bulkheads by different methods.

- 3. Analyze the anchored bulkheads, retaining structures, slopes, and cuts.
- 4. Analyze the stability analysis and seepage control measures.
- 5. Analyze protection of earth dams with its performance observations

Articulation Matrix

UNIT I

INTRODUCTION

Earth dams types of dams Design details upstream and downstream slope protection central and inclined cores types and design of filters. Seepage analysis and control seepage through dam and foundations control of seepage in earth dam and foundation.

UNIT II

LATERAL PRESSURE

Basic concepts Rankine and Coulomb earth pressure theories, graphical methods. Determining active and passive pressures Culmanns, Rebhans, logarithmic spiral methods, friction circle method. Consideration of surcharge, seepage, earth quake, wave effect, stratification, type of backfill, wall friction and adhesion. Retaining walls: Uses, types, stability and design principles of retaining walls, backfill drainage, settlement and tilting.

9 Hours

9 Hours

3003

UNIT III

ANCHORED BULKHEADS

UNIT IV

EARTH DAMS- STABILITY ANALYSIS

cofferdams in rock and in deep soils.

Classification, seepage control in embankments and foundations, seepage analysis, stability analysis upstreamand downstream for steady seepage, rapid draw down, end of construction, method of slices and Bishops method.

Classification of anchored bulkheads, free and fixed earth support methods. Rowes theory for free earth supports and equivalent beam methods for fixed earth supports. Design of anchored rods and dead man Bracedcuts and Cofferdams: Braced excavations and stability of vertical cuts, lateral pressures in sand and clay, Braced and cellular cofferdams uses, types, components, stability, piping and heaving. Stability of cellular cofferdams, cellular

UNIT V

EARTH DAMS -PROTECTION

Slope protection, filters, embankment construction materials and construction, quality control, grouting techniques. Instrumentation and performance observations in earth dams.

22CE025/22CEM25 URBAN TRANSPORTATION PLANNING ANDSYSTEMS

Course Objectives

- To enhance the knowledge of students on urban transportation planning techniques
- To distinguish the successful features of innovative transportation planning schemes
- To impart knowledge on transportation economics

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learningin the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide

range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze the transportation planning process, considering travel demand, societal concerns, and land-use interactions for effective mobility solutions.
- 2. Analyze travel demand estimation methods, including trip generation and distribution models, to enhance transportation planning efficiency
- 3. Design a transportation network with different models.
- 4. Evaluate mass transportation systems and emerging transit technologies to enhance urban mobility and accessibility
- 5. Evaluate economic principles and financing methods in transportation projects to optimize cost-effectiveness and investment decisions.

UNIT I

9 Hours

3003

INTRODUCTION TO PLANNING PROCESS

Role of Transportation and Changing Concerns of Society in Transportation Planning TransportationProblems and Problem Domain; Objectives and Constraints; Flow Chart for Transportation Planning Process

- Concept of Travel Demand - Survey on Data collection - Urban travel characteristics - Land use transport interaction.

UNIT II

METHODS OF TRAVEL DEMAND ESTIMATION

Assumptions in Demand Estimation - Introduction to Transportation Planning Practices; Four Stages of Planning -Trip generation analysis - Zoning - Trip generation models - Zonal models - Household models - Category analysis - Trip attractions of work centers - Trip distribution analysis - Trip distribution models.

UNIT III

MODE CHOICE AND ROUTE SPLIT ANALYSIS

Mode Choice - Mode split analysis - Mode split Models - Mode choice behavior, competing modes, mode split curves, probabilistic models - Traffic assignment - Route split analysis: Elements of transportation networks, nodes and links - Minimum path trees.

UNIT IV

MASS TRANSPORTATION SYSTEM

History and role of Transit - Recent Trends Mass Transportation Characteristics - Mass rapid transit system -Light rail transit - Personal rapid transit, guided way systems, cabin taxi and dual mode bus - Paratransit systems - Demand responsive system - Intermediate public transport.

UNIT V

TRANSPORT ECONOMICS

Basic principles of economic evaluation - Method of economic evaluation - Transportation costs - Vehicle operating costs - Financing of road projects - Methods - Private Public Partnership - Toll collection - Build- Operate-Transfer (BOT, BOLT) Schemes - Risk Analysis - Value for Money analysis - Case Studies.

22CE026 MASS TRANSPORTATION SYSTEMS

3003

Course Objectives

- \Box To enhance the knowledge on function of public transit and the role of government units
- □ To impart knowledge on mass transportation system
- □ To enable the students to get popular in conducting various traffic surveys and interpretationresults.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learningin the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide

range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze the four various modes of mass transportation
- 2. Analyze mass transportation demand characteristics and planning strategies to enhance urban mobility and transitoriented development
- 3. Evaluate mass transport system design and decision-making strategies to enhance efficiency, performance, and urban mobility
- 4. Analyze transit planning strategies to optimize system efficiency, flexibility, and accessibility in urban mobility
- 5. Analyze public transit systems by assessing their historical development, operational characteristics, and route optimization strategies

Articulation Matrix

UNIT I

INTRODUCTION

Urban transportation systems - Mass rapid transit system - Light rail transit - Personal rapid transit, guided way systems, cabin taxi, dual mode bus - Para transit systems - Demand responsive system - Intermediate public transport.

UNIT II

MASS TRANSPORTATION SYSTEM

History and role of Transit - Recent Trends Mass Transportation Characteristics - Demand Characteristics - Spatial - Temporal and Behavioral - Characteristics of Transportation Demand. - Urban Mass Transportation

Planning - Demand Surveys - Transit oriented land use development.

UNIT III

DESIGN AND EVALUATION OF MASS TRANSPORT

Four Stages of Planning - Performance Evaluation of Mass Transport System - Structure of Decision Ma king, -Evaluation and Selection Methods - Selection Procedures - Economic Evaluation Methods. Terminalsand their functions - Design, Typical Characteristics. - Scheduling, Service Analysis, Vehicle Dispatch Policy, Vehicle Requirements, Spacing of Bus Tropos, - Route Spacing and Performance - Operational and Management Issues - Reserved Bus Lanes - Signal Preemption, - Dial- a-Bus

UNIT IV

TRANSIT PLANNING

Introduction - Definition - Shuttle systems - Corridors - Two dimensional system - Realistic cases only - Flexible transit - Individual public transportation system -Collective transportation

UNIT V

PUBLIC TRANSIT

Introduction to public transit - History - Personal public transit experiences -Public transportation system characteristics - Mass transit definitions and classifications - Route development - stop location and stopping policy - Schedule development.

22CE027 TRAFFIC ENGINEERING AND MANAGEMENT

Course Objectives

- To Provide an insight in traffic and its components, factors affecting road traffic and the design of intersection
- To enable the students to get familiarize in conducting various traffic surveys, interpretation and analysis.
- To enhance an insight on different traffic regulations methods and management methods.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learningin the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide

range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Assess the impact of vehicle characteristics, road user behavior, and land use patterns on traffic conditions in India
- 2. Analyze the relationship between traffic volume, capacity, and speed in urban road networks
- 3. Evaluate the effectiveness of different intersection designs in minimizing traffic conflicts and improving flow efficiency
- 4. Analyze the impact of various traffic control measures on road safety and traffic efficiency.
- 5. Analyze the effectiveness of various traffic management strategies in optimizing urban mobility.

14

UNIT I

INTRODUCTION

Introduction -Characteristics of Vehicles and Road Users - Skid Resistance and Braking Efficiency, Components of Traffic Engineering- Road, Traffic and Land Use Characteristics - Traffic problems in India -Integrated development of cities and towns.

UNIT II

TRAFFIC SURVEYS AND ANALYSIS

Surveys and Analysis - Volume, Capacity, Speed and Delays, Origin and Destination, Parking, Pedestrian Studies, Accident Studies and Safety Level of Services- Basics of Traffic flow theory.

UNIT III

GEOMETRIC DESIGN OF INTERSECTIONS

Conflicts at Intersections - Classification of At-Grade Intersections, - Channelized Intersections - Principles of Intersection Design, Elements of Intersection Design, Rotary design, Grade - Separation and interchanges.

UNIT IV

TRAFFIC CONTROL

Traffic signs, Road markings, Design of Traffic signals and Signal co-ordination (Problems), Traffic control aids and Street furniture, Street Lighting, Computer applications in Signal design.

UNIT V

TRAFFIC MANAGEMENT

Traffic Management-Transportation System Management (TSM) - Travel Demand Management (TDM), IRCguidelines - Traffic Forecasting techniques, Restrictions on turning movements, One- way Streets, Traffic Segregation, Traffic Calming, Tidal flow operations, Exclusive Bus Lanes, Introduction to Intelligent Transportation System (ITS).

22CE028 AIRPORT DOCKS AND HARBOUR

Course Objectives

- To provide a basic knowledge on planning and design of airports.
- To impart a basic knowledge on planning of harbor and its components.
- To impart a basic knowledge on Ports and Coastal structures.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to ones own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PSO1. Gradates will be able to apply technical skills and modern engineering tools with critical thinking and innovations for solving civil engineering problems.

PSO2. Gradates will be able to design sustainable and smart infrastructure in the context of environmental, economical, and societal requirements and serve the community as ethical and responsible professionals.

Course Outcomes (COs)

- 1. Assess the Planning facilities and enhance the airport's airside operations.
- 2. Analyze the Orientation techniques and design the elements of the runway and taxiway.
- 3. Demonstrate the importance of various harbor elements in harbor planning.
- 4. Assess the techniques involved in the Planning of Ports and facilities to develop inland water transportation.
- 5. Evaluate the performance of coastal structures and dredging techniques in mitigating coastal erosion, protecting shorelines, and enhancing inland water transport efficiency.

Articulation Matrix

5	2	1	3	-	-	-	-	-	-	-	-	-	-	1

UNIT I AIRPORT PLANNING AND VISUAL AIDS

9 Hours

Introduction - Airport planning - Standards for planning of airports as per ICAO - Airport site selection - Aircraft characteristics and their impact on planning of an airport - Airport layout - Components of airports - Terminal area - Passenger facilities - Aprons - Hangars - Airport zoning - Air Traffic Control - Airport drainage - Aircraft parking system - Visual aids - Importance of airports in national transportation sector.

UNIT II AIRPORT DESIGN AND CONTROL AIDS

Introduction to Airport pavement design - Runway design - Orientation - Geometric design and Correction for gradients -Pattern of Runways - Runway configuration - Taxiway - Factors governing layout of taxiways- Rapid exit taxiways -Separation clearance - Parking and circulation area - Marking and lighting of runway and apron area - Wind and landing direction indicator

UNIT III HARBOUR ENGINEERING

Definition of terms - Harbours, ports, docks, tides and waves - Harbours - Site investigation - Planning, requirements and classification - Concept of satellite ports - Docks - Dry and Wet Docks - Dredgers and dredging - Terminal facilities - Shipping terminal facilities - Essentials of passenger terminal- Warehouse - Transit sheds - Mooring accessories - Navigational aids - Piers - Breakwaters - Wharves - Jetties - Quays - Spring fenders - Littoral drift

UNIT IV PORT PLANNING AND BUILDING

Port development, port planning, port building facilities, transit sheds, warehouses, cargo handling facilities, container handling terminal facilities, shipping terminals, inland port facilities.

UNIT V COASTAL STRUCTURES

Dredging and Coastal Protection: Classification, types of dredgers, choice of dredger, uses of dredged materials, coastal erosion and protection, sea wall, revetment, bulkhead, coastal zone-Inland Water Transport - Wave action on Coastal Structures and Coastal Protection Works - Coastal Regulation Zone

22CE029 TOTAL STATION AND GPS SURVEYING

3003

Course Objectives

- To understand the working of Total Station equipment and solve the surveying problems
- To train the students to acquire skill in making precise measurements and obtaining accurate results with Total Station and GPS
- To make students aware with different advance surveying methodologies applied to carry out large scale survey works as modern instruments have largely changed the approach to survey works with the principles being same.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze the principles and advancements in Total Station and GPS technologies to enhance precision in geospatial measurements and surveying applications
- 2. Evaluate the propagation characteristics and refractive index variations of electromagnetic waves to enhance accuracy in atmospheric and geospatial applications.
- 3. Analyze the principles, errors, and applications of electro-optical and microwave total station systems
- 4. Evaluate the components, signal structures, and operational mechanisms of GPS satellite systems to enhance positioning accuracy and navigation reliability.
- 5. Analyze GPS data processing techniques to optimize geospatial positioning and navigation applications

5	3	3	3	3	-	-	-	-	-	-	-	-	1	3

Articulation Matrix

UNIT I

FUNDAMENTALS OF TOTAL STATION AND GPS

Methods of Measuring Distance, Basic Principles of Total Station, Historical Development, Classifications, applications and comparison with conventional surveying. Basic concepts of GPS - Historical perspective and development - applications - Geoid and Ellipsoid- satellite orbital motion - Keplerian motion- Kepler's Law -Perturbing forces - Geodetic satellite - Doppler effect - Positioning concept-GNSS

UNIT II

ELECTROMAGNETIC WAVES

Classification - applications of Electromagnetic waves, Propagation properties, wave propagation at lower and higher frequencies- Refractive index (RI) - factors affecting RI- Computation of group for light and near infrared waves at standard and ambient conditions- Computation of RI for microwaves at ambient condition -Reference refractive index-Real time application of first velocity correction. Measurement of atmospheric parameters- Mean refractive index-Second velocity correction -Total atmospheric correction- Use of temperature - pressure transducers

UNIT III

ELECTRO OPTICAL AND MICRO WAVE SYSTEM

Electro-optical system: Measuring principle, Working principle, Sources of Error, Infrared and Laser Total Station instruments- Microwave system: Measuring principle, working principle, Sources of Error, Microwave Total Station instruments- Comparison between Electro- optical and Microwave system. Care and maintenance of Total Station instruments. Modern positioning systems - Traversing and Trilateration

UNIT IV

SATELLITE SYSTEM

GPS - Different segments - space, control and user segments - satellite configuration - GPS signal structure - Orbit determination and representation - Anti Spoofing and Selective Availability - Task of control segment -GPS receivers

UNIT V

GPS DATA PROCESSING

GPS observables - code and carrier phase observation - linear combination and derived observables - concept of parameter estimation downloading the data -data processing software modules -solutions of cycle slips, ambiguities, RINEX format. Concepts of rapid, static methods with GPS - semi Kinematic and pure Kinematic methods -basic constellation of satellite geometry & accuracy measures - applications- long baseline processing- use of different softwares available in the market

22CE030 REMOTE SENSING AND GIS

3003

Course Objectives

- To deliver the fundamental principles of Remote Sensing and its limitations.
- To impart training on the image Interpretation and Analysis.
- To develop the GIS modeling techniques and applications.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meetthe specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate the principles of remote sensing to enhance geospatial data acquisition and analysis
- 2. Analyze various image interpretation techniques to extract meaningful spatial information from remote sensing data.
- 3. Evaluate the fundamental components of GIS, data structures, and spatial analysis techniques to effectively process and interpret geospatial information
- 4. Develop spatial data model techniques for effective geospatial decision-making.
- 5. Evaluate and apply Remote Sensing and GIS techniques for efficient management of natural resources, disaster mitigation, and environmental sustainability

Articulation Matrix

UNIT I

FUNDAMENTALS OF REMOTE SENSING

History of remote sensing - Indian Space Programs - Elements of remote sensing - Electromagnetic spectrum Wavelength regions important to remote sensing - Particle and Wave theory - Stefan-Boltzman and Wein'sLaws - Atmospheric scattering and absorption - Platforms and Sensors.

UNIT II

IMAGE INTERPRETATION AND ANALYSIS

Concept and types of image interpretation - Basic elements of image interpretation - Visual interpretation keys-Types of Data Products - Digital Image Processing - Pre-processing - Image compression and enhancement techniques - Multispectral Image classification - Supervised and unsupervised.

UNIT III

GEOGRAPHICAL INFORMATION SYSTEM AND ITS ANALYSIS

GIS definition - Basic components of GIS - Data types - Spatial and non-spatial data - Raster and Vector Data -Analysis and structure of Raster and Vector data - Maps - Map projections - Types of map projections-Concept of GPS and its advantages.

UNIT IV

DATA INPUT, EDITING AND ANALYSIS

Input methods - Data stream - Data Retrieval - Query Building - Simple Spatial Analysis - Overlay Technique Topological analysis - Modeling surfaces - TIN -DEM - DTM - Slope Model - Integration of Remote Sensingand GIS.

UNIT V

MAJOR APPLICATIONS OF REMOTE SENSING AND GIS

Natural Resources Management - Land Cover and Land Use - Water Resources and Watershed Management Irrigation and Agriculture - Environmental studies - Groundwater exploration - Wasteland Management -Forest Resources - Natural Disaster Management - Landslides, Flood Routing, Forest Fires, Earthquakes.

22CE031/22CEM31 AIR POLLUTION CONTROL ANDMANAGEMENT 3003

Course Objectives

- To learn the concept of air pollution and its control measures.
- To understand the sources, types, and effects of air pollution on human health, ecosystems, and the environment.
- To know about the various air pollution control technologies and strategies.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze air pollution sources, dispersion patterns, and their impacts to develop effective air quality management strategies
- 2. Evaluate the appropriate particulate matter control technologies based on efficiency, pressure drop, and operational considerations.
- 3. Design effective control technologies for gaseous pollutants
- 4. Evaluate the effectiveness of emerging air pollution control technologies
- 5. Design regulatory frameworks for effective air quality management and pollution control

Articulation Matrix

UNIT I

9 Hours

INTRODUCTION

Air pollution - Definition and scope - Air quality management - Scales of air pollution - Sources and classification of pollutants and their effect on human health, vegetation and property - Ambient Air Quality and Emission Standards - Meteorology Fundamentals - Dispersion models - Plume behaviour.

UNIT II

CONTROL OF PARTICULATE MATTERS

Selection of Control equipment - Settling chambers - Filters, gravitational, Centrifugal - multiple type cyclonesprediction of collection efficiency- pressure drop- wet collectors- Fabric Filters- Electrostatic Precipitators - Operational Considerations.

UNIT III

CONTROL OF GASEOUS MATTERS

Selection of control Equipment -Principles of Absorption - Adsorption - Condensation - Incineration - Biological air pollution control technologies - Bio scrubbers -Bio filters.

UNIT IV

EMERGING TRENDS

Process modification - Automobile air pollution and its control - Fuel modification - Mechanical particulate collectors - Entrainment separation - Internal combustion engines - Membrane process - Ultraviolet photolysis

- High efficiency particulate air filters - Technical and economic feasibility of selected emerging technologies for air pollution control - Control of indoor air quality.

UNIT V

AIR QUALITY MANAGEMENT

Air quality standards - Air quality monitoring - Preventive measures - Air pollution control efforts - Zoning - Town planning regulation of new industries - Legislation and enforcement - Environmental Impact Assessment and Air quality - Air quality management at Delhi -a case study.

22CE032/22CEM32 SOLID WASTE MANAGEMENT

3003

Course Objectives

- To emphasize the need integrated municipal solid waste management.
- To provide basic for knowledge about the sources, quantity and characteristic of solid waste.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life- long learning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate solid waste characteristics and design effective management strategies
- 2. Evaluate solid waste collection systems and design optimized transportation strategies.
- 3. Evaluate solid waste processing techniques and design efficient off-site treatment systems.
- 4. Evaluate waste-to-energy techniques and design sustainable disposal mechanisms for solid waste management.
- 5. Evaluate biomedical waste treatment methods and design safe disposal strategies following regulatory guidelines.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

5	2	2	-	-	-	-	1	-	-	-	-	-	1	1

UNIT I

FUNDAMENTALS OF SOLID WASTE MANAGEMENT

Solid waste - Scope and importance - Sources and types of solid wastes - Functional elements of solid waste management - Quantity assessment - Generation rate - Factors affecting generation of solid wastes - characteristics - Methods of sampling - Effects of improper disposal of solid wastes - Public awareness; Roleof NGOs; Legal framework regulating municipal solid waste management.

UNIT II

COLLECTION, SEGREGATION AND TRANSPORTATION OF SOLID WASTE

On-site storage methods - Materials used for containers - On-site segregation of solid wastes - Colour codes - Garbage chutes - Methods of public collection - Selection of location - Requirement of human resources - Types of vehicles - Collection routes - Transfer stations - Operation and maintenance - Options under Indian conditions - Route optimization - Case studies.

9 Hours

9 Hours

14

UNIT III

OFF-SITE PROCESSING OF SOLID WASTE

Processing techniques and Equipments: Sorting - Manual and Mechanical - Magnetic Separators - Ballistic method - Eddy Current Separators - Screens for size separation. Volume Reduction - Compaction and Baling; Size Reduction - Shredding - Automatic shredders - Case studies.

UNIT IV

WASTE CONVERSION TECHNIQUES AND DISPOSAL

Waste to Energy Techniques Composting Aerobic and anaerobic processes Bangalore and Indore processes byproducts Factors affecting composting Merits and demerits Types of composting Incineration, Pyrolysis Merits and demerits. Disposal Mechanisms Open area Dumping Sanitary Land filling Site selection, design and operation of sanitary landfills Methods of sanitary landfills Leachate collection and treatment Fertilizer Residential waste Case studies

UNIT V

BIOMEDICAL WASTE MANAGEMENT (BMW)

Introduction - Need for safe treatment and disposal of BMW - Colour coding - Types of containers - Categories of Biomedical Waste; Treatment and disposal methods of Biomedical Waste - Biomedical waste management regulations. Total: 45 Hours

22CE033/22CEM33 ENVIRONMENTAL IMPACT ASSESSMENT 3003

Course Objectives

- To emphasize the need for EIA.
- To provide basic knowledge on the components, methods and quality control measures of EIA.
- To make the students understand the importance of documentation and monitoring of EIA alongwith case studies.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineeringspecialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8 Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9 Function effectively as an individual, and as a member or leader in diverse teams, and inmultidisciplinary settings.

PO10 Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate Environmental Impact Assessment methodologies and design effective mitigation strategies within legal and regulatory frameworks
- 2. Analyse the cost benefits and its alternatives in EIA
- 3. Evaluate environmental impacts using predictive methods and design effective mitigation strategies for sustainable decision-making.
- 4. Evaluate environmental monitoring strategies and design comprehensive documentation plans for effective impact management.
- 5. Evaluate public participation strategies and design effective conflict management approaches for environmental decisionmaking

5	-	-	-	-	-	3	-	-	2	2	-	-	1	1

Articulation Matrix

UNIT I

INTRODUCTION

Environmental Impact Assessment (EIA) - Environmental Impact Statement (EIS) - Environmental Risk Assessment (ERA) - Legal and Regulatory aspects in India - Types and limitations of EIA - Issues in EIA - National, Cross sectoral, Social and cultural Terms of Reference in EIA.

UNIT II

COMPONENTS AND QUALITY ANALYSIS

Components - Screening - Setting - Analysis - Prediction of impacts - Mitigation - Matrices - Networks - Checklists - Impact Assessment techniques - Cost benefit analysis - Analysis of alternatives; Trends in EIA practice and evaluation criteria - Capacity building for quality assurance - Expert System in EIA - Formats of regulations.

UNIT III

PREDICTION, ASSESSMENT AND MITIGATION

Methods for Prediction and assessment of impacts on Air, Water, Soil and Noise - Biological, Cultural, Social and Economic environments - Standards and guidelines for evaluation - Options for mitigation of impacts - Policies for decision making.

UNIT IV

DOCUMENTATION AND MONITORING

Document planning - Collection and organization of relevant information - Use of visual display materials - Team writing - Reminder checklists - Environmental monitoring - Guidelines - Policies - Planning of monitoring programmes - Environmental Management Plan -Post project audit.

UNIT V

PUBLIC PARTICIPATION

Objectives of public participation - Regulatory requirements - Merits and demerits - Conducting public participation - Conflict management - Dispute resolution - Questionnaires for decision making - Public awareness.

22CE034/22CEM34 ENERGY SCIENCE AND ENGINEERING 3 0 0 3

Course Objectives

- To impart knowledge on the renewable energy resources
- To introduce the concept of energy source and technology.
- To examine the environmental impacts of different energy systems.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineeringspecialization to the solution of complex engineering problems.

PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal andcultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7 Understand the impact of the professional engineering solutions in societal and environmentalcontexts, and demonstrate the knowledge of, and need for sustainable development.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a widerange of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate energy systems and design sustainable solutions addressing societal, environmental, and climate challenges
- 2. Design sustainable energy storage solutions considering environmental trade-offs.
- 3. Evaluate clean energy technologies for sustainable development
- 4. Design sustainable civil engineering solutions by evaluating energy infrastructure challenges
- 5. Design energy-efficient buildings by evaluating sustainability principles and conservation techniques.

UNIT I INTRODUCTION TO ENERGY

SCIENCE

Scientific principles and historical interpretation to place energy use in the context of pressing societal, environmental and climate issues; Introduction to energy systems and resources; Introduction to Energy, sustainability & the environment

UNIT II

ENERGY SOURCES

Overview of energy systems, sources, transformations, efficiency, and storage. Fossil fuels (coal, oil, oil- bearing shale and sands, coal gasification) - past, present & future, Remedies & alternatives for fossil fuels - biomass, wind, solar, nuclear, wave, tidal and hydrogen; Sustainability and environmental trade-offs of different energy systems; possibilities for energy storage or regeneration (Ex. Pumped storage hydro power

projects, superconductor-based energy storages, high efficiency batteries).

UNIT III

ENERGY AND ENVIRONMENT

Energy efficiency and conservation; introduction to clean energy technologies and its importance in sustainable development; Carbon footprint, energy consumption and sustainability; introduction to the economics of energy; How the economic system determines production and consumption; linkages between economic and environmental outcomes; How future energy use can be influenced by economic, environmental, trade, and research policy.

UNIT IV

CIVIL ENGINEERING PROJECTS CONNECTED WITH THE ENERGY SOURCES

Coal mining technologies, Oil exploration offshore platforms, Underground and under sea oil pipelines, Solar chimney project, wave energy caissons, coastal installations for tidal power, wind mill towers; hydro power stations above-ground and underground along with associated dams, tunnels, penstocks, etc.; Nuclear reactor containment buildings and associated buildings, design and construction constraints and testing procedures for reactor containment buildings; Spent Nuclear fuel storage and disposal systems.

UNIT V

ENGINEERING FOR ENERGY CONSERVATION

Concept of Green Building and Green Architecture; Green building concepts (Green building encompasses everything from the choice of building materials to where a building is located, how it is designed and operated); LEED ratings; Identification of energy related enterprises that represent the breath of the industry and prioritizing these as candidates; Embodied energy analysis and use as a tool for measuring sustainability. Energy Audit of Facilities and optimization of energy consumption

22CE035/22CEM35 INDUSTRIAL WASTE MANAGEMENT 3003

Course Objectives

- To provide basic knowledge on the management practices of solid and liquid waste.
- To impart knowledge on the collection, transport and disposal of solid waste.
- To emphasize the need for solid and liquid waste management.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineeringspecialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reachingsubstantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-longlearning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a widerange of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate the impact of industrial pollution
- 2. Analyze the impact of industrial pollution on environmental and human health.
- 3. Analyze the effectiveness of various treatment technologies for industrial wastewater management
- 4. Analyze the opportunities and barriers to implementing cleaner production technologies in process industries.
- 5. Analyze the characterization, treatment, and disposal methods for hazardous waste management.

UNIT I

9 Hours

INTRODUCTION

Types of industries and industrial pollution - Nature and Characteristics of industrial wastes - Population equivalent - Bioassay studies - Effects of industrial effluents on streams, sewer, land, sewage treatment plants and human health - Environmental legislations related to prevention and control of industrial effluents and hazardous wastes.
POLLUTION FROM MAJOR INDUSTRIES

UNIT III

TREATMENT TECHNOLOGIES

Wastewater reclamation concepts.

Equalization - Neutralization - Removal of suspended and dissolved organic solids - Chemical oxidation - Adsorption - Removal of dissolved inorganics - Combined treatment of industrial and municipal wastes - Residue management - Dewatering - Disposal.

Sources, Characteristics, waste treatment flow sheets for industries such as Textiles, Tanneries, pharmaceuticals, electroplating industries, dairy, sugar, paper, distilleries, steel plants, refineries, fertilizers, thermal power plants -

UNIT IV

CLEANER PRODUCTION

Waste management Approach - Waste Audit, emission inventories and waste management hierarchy for process industries - Zero discharge - Volume and strength reduction - Material and process modifications - Recycle, reuse and byproduct recovery - Applications. Opportunities and barriers to cleaner technologies; Pollution prevention economics; Waste audits- Material balance approach.

UNIT V

HAZARDOUS WASTE MANAGEMENT

Hazardous wastes - Sources & characterization - Collection, Segregation - Physio chemical treatment - Solidification - Incineration - Secured landfills - Bioremediation of contaminated sites - Regulatory aspects.

22CE036/22CEM36 HAZARDOUS WASTE MANAGEMENT 3003

Course Objectives

- To familiarize the laws and regulations governing hazardous waste storage, transport and treatment.
- To identify environmental concerns for hazardous waste on water, land and air.
- To identify containment technologies and land treatment techniques for hazardous waste.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-longlearning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a widerange of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

1. Examine the sources, management strategies, and regulatory frameworks for hazardous waste handling

2. Analyze the characteristics, classification, and regulatory aspects of hazardous waste for effective management.

3. Apply safe handling, storage, and transportation techniques for hazardous waste management.

4. Analyze various hazardous waste processing technologies for effective treatment and disposal.

5. Evaluate various hazardous waste disposal methods for environmental sustainability

UNIT I

SOURCES OF HAZARDOUS WASTE

Types and Sources hazardous wastes - Need for hazardous waste management - Elements of integrated Hazardous waste management and roles of stakeholders and NGOS - Salient features of Indian legislations on management and handling of hazardous wastes, biomedical wastes, lead acid batteries, E-waste - Case studies.

CHARACTERIZATION OF HAZARDOUS WASTE

reduction of wastes - Recycling and reuse - Hazardous Waste Management Rules 2016.

UNIT III

UNIT IV

UNIT V

HANDLING OF HAZARDOUS WASTE

Handling and segregation of wastes at source - Storage and collection Hazardous wastes - Need for transfer and transport - Transfer stations Optimizing waste allocation - Compatibility, storage, labelling and handling of hazardous wastes.

Hazardous waste generation rates and variation - Composition, physical, chemical and biological properties of Hazardous wastes - Hazardous Characteristics - TCLP tests - Waste sampling and characterization plan - Source

PROCESSING OF HAZARDOUS WASTE Objectives of waste processing - Material separation and processing technologies - Biological and chemical conversion technologies - Thermal conversion technologies and energy recovery - Incineration - Solidification and stabilization of hazardous wastes - Treatment of biomedical wastes and E-waste.

DISPOSAL OF HAZARDOUS WASTE

Waste disposal options - Disposal in landfills - Landfill Classification- Construction and operation of secured landfills - Bioreactors - Ocean dumping - Land disposal - Soil remediation - Case studies.

22CE037 APPLICATIONS OF NUMERICAL METHODSIN CIVIL ENGINEERING

Course Objectives

- Understand the history and basics of numerical methods.
- Understand the application aspects of numerical methods in civil engineering.
- Gain knowledge about the different numerical techniques available.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reachingsubstantiated conclusions using first principles of mathematics, natural sciences, and engineeringsciences.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-longlearning in the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of CivilEngineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Apply numerical methods to solve linear algebraic equations efficiently.
- 2. Estimate the intermediate values using interpolation concepts.
- 3. Apply numerical differentiation techniques to solve first-order equations accurately.
- 4. Apply various numerical techniques in solving complex partial differential equations.
- 5. Apply various numerical techniques in solving complex differential equations

UNIT I

LINEAR ALGEBRAIC EQUATIONS

Method of false position Newtons method Solution of linear system of equations by Gaussian elimination and Gauss Jordan methods Iterative methods Gauss Jacobi and Gauss Seidel methods.

UNIT II

INTERPOLATION

Newtons forward and backward difference formulae Bessels formula Lagranges interpolation formulaNewtons divided difference formula.

SS

9 Hours

9 Hours

3003

NUMERICAL DIFFERENTIATION

Differentiation Using Newtons forward, backward and divided difference interpolation formula Single step Methods Taylor Series Euler and Modified Euler methods Fourth order RungeKutta method for solving first order equations Multistep methods Milnes and Adams predictor and corrector methods.

UNIT IV

NUMERICAL INTEGRATION

Trapezoidal rule Simpsons 1/3 Double integrals using Trapezoidal and Simpsons rules

UNIT V

BOUNDARY VALUE PROBLEMS IN PDE

Finite difference approximations to partial derivatives Two dimensional Laplace equations Poisson equations One dimensional heat equation by implicit and explicit methods One dimensional wave equation.

22CE038 APPLICATION OF PYTHON FOR CIVIL ENGINEERING

Course Objectives

- Understand the history and basics of python.
- Gain knowledge about the different data types and control flow statements.
- Impart knowledge about the functions, files, list, set tuples and dictionaries.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-longlearningin the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range of CivilEngineering problems with innovative research attributes.

Course Outcomes (COs)

1. Analyze computational problems and develop algorithms using basic strategies such as iteration and recursion.

- 2. Develop python programs using expressions and statements.
- 3. Apply control flow concepts, functions, and string manipulations to solve computational problems.
- 4. Apply the concepts of functions and files in python programming.
- 5. Design applications using list, sets, tuples and dictionaries in python

Articulation Matrix

5	2	2	-	-	-	-	1	-	-	-	-	-	1	1

UNIT I

COMPUTATIONAL THINKING AND PROBLEM SOLVING

Fundamentals of Computing Identification of Computational Problems Algorithms building blocks of algorithms statements, state, control flow, functions, notation pseudo code, flow chart, programming language, algorithmic problem solving, simple strategies for developing algorithms iteration, recursion. Illustrative problems find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

DATA TYPES, EXPRESSIONS, STATEMENTS

Python interpreter and interactive mode, debugging; values and types int, float, boolean, string, and list variables, expressions, statements, tuple assignment, precedence of operators, comments; Illustrative programs exchange the values of two variables, circulate the values of n variables, distance between two points.

UNIT III

CONTROL FLOW, FUNCTIONS, STRINGS

Conditionals Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif- else) Iteration state, while, for, break, continue, pass Fruitful functions return values, parameters, local and global scope, function composition, recursion Strings: string slices, immutability, string functions and methods, string module Lists as arrays. Illustrative programs square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

UNIT IV

LISTS, TUPLES, DICTIONARIES

Lists list operations list slices list methods list loop mutability aliasing cloning lists list parameters Tuples tuple assignment tuple as return value Dictionaries operations and methods advanced list processing list comprehension Illustrative programs simple sorting histogram Students marks statement Retail bill preparation.

UNIT V

FILES, MODULES, PACKAGES

Files and exception text files reading and writing files, format operator command line arguments, errors and exceptions, handling exceptions, modules, packages Illustrative programs word count, copy file, Voters age validation, Marks range validation.

22CE039 INSTRUMENTATION AND SENSOR TECHNOLOGIES FOR CIVIL ENGINEERING

Course Objectives

- To provide students with a comprehensive understanding of instrumentation principles relevant tocivil engineering applications.
- To enable students to apply instrumentation effectively in civil engineering projects.
- To enable students to apply sensor technologies effectively in civil engineering projects.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-longlearningin the broadest context of technological change.

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executingInfrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide range f Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze instrumentation systems with consideration of measurement errors, calibration techniques, and dynamic characteristics in civil engineering applications
- 2. Design resistive and inductive transducers for civil engineering measurement systems
- 3. Evaluate the capacitive and piezoelectric transducers for precise measurements
- 4. Analyze the Hall effect and optical transducers for the measurement of displacement, current, and power.
- 5. Design digital encoding and smart sensors, focusing on their applications in Civil Engineering

UNIT I INTRODUCTION

Definition of sensor transducer Block Diagram elements of measurement system classification of sensors transducers static characteristics accuracy precision resolution linearity, sensitivity, range, loading effect, threshold,dead time, dead zone, span.Errors in measurement True value, static error, static correction, scale range and scale span, error calibration curve, readability, repeatability & reproducibility, drift and noise

9 Hours

3003

RESISTIVE TRANSDUCERS

Potentiometers-Linear POT, Rotary POT, characteristics of POT. Thermistors- Construction and its Resistance-Temperature characteristics. Thermocouples- Construction and its Resistance-emf characteristics inductive transducers-Principle of change of self inductance, Principle of change of mutual inductance, Linear variable differential transformer(LVDT), Rotary variable differential transformer(RVDT).

UNIT III

CAPACITIVE TRANSDUCERS

Introduction-Variable area type-variable air gap type- differential arrangement in capacitive transducers, variation of dielectric constant for measurement of liquid level, variation of dielectric constant for measurement of displacement, advantages & disadvantages of Capacitive transducers.

Piezoelectric transducers- Measurement of Force, Modes of operation of piezoelectric crystals, properties of piezoelectric crystals, use of Piezoelectric Transducers.

UNIT IV

HALL EFFECT TRANSDUCERS

Hall effect element, Measurement of displacement, current and power. Optical Transducers Vacuum photo emissive cell and its characteristics, semi conductor photo electric transducer- Photo conductive cell and its characteristics, photo diode and its characteristics, photovoltaic cell and its characteristics.

UNIT V

DIGITAL AND SMART SENSORS

Introduction to digital encoding transducer- digital displacement transducers- shaft encoder-optical encoder, Introduction to Smart Sensors, Overview in Applications of sensors in Civil Engineering

22CE042 RISK ASSESSMENT AND SAFETY MANAGEMENT

Course Objectives

- Understand the history risk assessment and safety measures need for civil engineers.
- Gain knowledge about the different techniques available for predicting risk and safety measures.
- To explore the various risk and safety management for successful completion of Construction projects.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing Infrastructural projects ensuring safety, cost-effectiveness and sustainability.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a widerange of Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Evaluate workplace hazards and recommend risk control measures to enhance safety and health compliance
- 2. Analyze construction site hazards and develop safety strategies to minimize risks and legal implications.
- 3. Evaluate safety measures for handling construction equipment to mitigate risks and ensure compliance with OSHA standards.
- 4. Analyze the impact of environmental safety measures on sustainable development and pollution control
- 5. Evaluate the effectiveness of fire safety installations in different building types to ensure compliance with fire protection standards

Articulation Matrix

INTRODUCTION

Risk assessment and control- Legal Basis for Risk Assessment - Hazards, remedial measures -Safety and health policy- Motivation of employees - Workplace Precautions - Management responsibilities, Individual responsibilities -Training for Safety and Health- Insurance coverage of Industrial plant & personnel.

UNIT II

CONSTRUCTION SAFETY CONSTRUCTION SAFETY

Quality and Safety Concerns in Construction -Organizing for Quality and Safety - Work and MaterialSpecifications - Importance of Safety during project construction - Accidents and their Causes - General precaution to hazardous atmosphere and materials - Safety facilities at construction sites - Training to project staff and operation staff - Emergency rescue equipment - Costs of Construction Injuries - Legal Implications.

UNIT III SAFETY MEASURES IN HANDLING CONSTRUCTIONEQUIPMENTS

General requirements of safety in concrete construction Handling of Concrete forms and shoring Safety measures for hoisting and erection of prefabricated elements OSHA (Occupational Safety and Healthy Administration) for Prestressing Operations Risk Assessment for erecting RC & Steel members Electrical safety in construction site.

UNIT IV

ENVIRONMENTAL SAFETY

Scope and Importance of Environmental safety- Environmental impact assessment (EIA) - Environmental pollution - Sustainable development- Global warming, greenhouse effect, urbanization

- Role of Government in environment protection- National Committee on environmental Planning (NCP)- Environmental Appraisal Committee (EAC) - Role of individual in prevention of pollution

UNIT V

FIRE SAFETY INSTALLATION

Fire extinguishing appliances -Selection requirements, installation and maintenance - Sprinkler system - Maintenance of sprinkler installation - Pressure gauges, Installation of control valves - Fire protection requirements for buildings and riser system- Fire alarm Systems, Manually operated fire alarms - Smoke detectors, Fire extinguishing appliances in multi storied buildings, hotels etc.

22OCE01 ENERGY CONSERVATION AND MANAGEMENT

Course Objectives

- To develop an understanding and analyze the energy data of industries
- To carryout energy accounting and balancing
- To conduct energy audit and suggest methodologies for energy savings and
- To utilize the available resources in optimal ways

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching

substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, anddemonstrate the knowledge of, and need for sustainable development.

PO12 Recognize the need for, and have the preparation and ability to engage in independent and life- longlearning in the broadest context of technological change.

PSO2 Graduates will be able to implement various software tools and smart technologies to solve a wide rangeof Civil Engineering problems with innovative research attributes.

Course Outcomes (COs)

- 1. Analyze the impact of energy resource utilization on sustainability and environmental balance.
- 2. Evaluate energy-efficient building design strategies to enhance sustainability and optimize resource utilization
- 3. Analyze the efficiency of sustainable construction techniques in excavation, foundation, and infrastructure projects to optimize environmental and economic outcomes
- 4. Evaluate the effectiveness of water conservation techniques to enhance sustainability in water resource utilization
- 5. Analyze various energy recovery techniques from waste to optimize sustainable energy production

UNIT I

9 Hours

3003

INTRODUCTION TO ENERGY SCIENCE

Introduction to energy systems and resources; Introduction to Energy, sustainability & the environment.Energy - Past & Present scenario of World; Renewable and Nonrenewable energy resources

ENERGY CONSERVATION IN BUILDINGS

Principles of Planning of buildings: orientation, energy efficiency, utility. Components of building-classification of buildings. Green building - LEED building assessment standard – LEED certification process - Building rating system - Building energy issues – Building energy design strategies – Energy Auditing

UNIT III

SUSTAINABLE CONSTRUCTION

Equipment use in excavations, foundation, concreting. Advanced Techniques in tunneling, under water construction, piling techniques, Innovations & efficiency in Highways, Railways & Harbours - linkages between economic and environmental outcomes

UNIT IV

WATER CONSERVATION & SUSTAINABILITY

Types of reservoirs and its functions – Hydropower production – Types of Turbines & selections of turbines & Energy calculations. Water losses from reservoirs and channels – Canal lining & its economic aspects. Water supply systems & Irrigation methods - Rain Water Harvesting methods & benefits.

UNIT V

ENERGY RECOVERY FROM WASTE

Classification and sources of wastes- Factors affecting MSW generation – Waste management hierarchy - Energy recovery from wastes: Thermochemical methods for energy production - Details of incineration, gasification and pyrolysis & biochemical conversions - Landfill gas recovery system - Principles of fermentation - Concept of MFC - Trans-esterification process - Biofuel processing - Biomass gasification-Organic waste for hydrogen production.

22OCE02 COST MANAGEMENT OF ENGINEERING PROJECTS

3003

Course Objectives

• To introduce fundamental quantitative techniques, including linear programming, PERT/CPM, and optimization models, for effective cost management.

• To develop analytical skills for solving transportation and assignment problems to enhance resource allocation and cost efficiency.

• To apply learning curve theory in project planning and cost estimation to improve productivity and financial forecasting.

• To enable the use of quantitative decision-making tools for optimizing project scheduling, budgeting, and overall cost control.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations

PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to ones own work, as a member and leader in a team, to manage projects and in multidisciplinary environments

PSO1 Graduates will be able to demonstrate technical skills with inter-disciplinary approach for executing Infrastructural projects ensuring safety, cost-effectiveness and sustainability.

Course Outcomes (COs)

1. Analyze the cost concepts to support decision-making and operational control through a structured cost database.

2. Analyze stakeholder roles to optimize project performance and mitigate cost overruns.

3. Analyze project execution and cost control techniques to support strategic decision-making and optimize project financial performance.

4. Evaluate costing strategies and budgetary control techniques in the service sector.

5. Apply quantitative techniques to optimize cost management and decision-making in projects.

Articulation Matrix

UNIT I

9 Hours

INTRODUCTION TO COSTING CONCEPTS

Objectives of a Costing System; Cost concepts in decision-making; Relevant cost, Differential cost, Incremental cost and Opportunity cost; Creation of a Database for operational control.

UNIT 2

INTRODUCTION TO PROJECT MANAGEMENT

Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities, Detailed Engineering activities, Pre project execution main clearances and documents, Project team: Role of each member, Importance Project site: Data required with significance, Project contracts

UNIT 3

PROJECT EXECUTION AND COSTING CONCEPTS

Project execution Project cost control, Bar charts and Network diagram, Project commissioning: mechanical and process, Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis, Various decision-making problems, Pricing strategies: Pareto Analysis, Target costing, Life Cycle costing.

UNIT 4

COSTING OF SERVICE SECTOR AND BUDGETERY CONTROL

Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Activity Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis, Budgetary Control: Flexible Budgets; Performance budgets; Zero-based budgets.

UNIT 5

QUANTITATIVE TECHNIQUES FOR COST MANAGEMENT

Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Activity Based Cost

22OEI04 OPTOELECTRONICS AND LASER INSTRUMENTATION 3003

Course Objectives

- To enhance the student knowledge in fiber optics fundamentals and fabrication
- To be recognized with industrial applications of fibers
- To understand the fundamental concepts about lasers
- To identify and describe various fiber optic imaging and optoelectronic sensor applications

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Course Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

- 1. Attribute the properties of optical fibers, their light sources and detectors.
- 2. Implement the fiber-optic sensor for the measurement of various physical quantities.
- 3. Conclude the fundamentals of laser, types of laser and its working.
- 4. Outline the applications of laser for industrial applications.
- 5. Differentiate the use of laser instruments for various medical applications.

Articulation Matrix

OPTICAL FIBERS AND THEIR PROPERTIES

Introduction to optical fibers - Light guidance - Numerical aperture - Dispersion - Different types of fibers and their properties- Light Sourcesfor fiber optics, Photo detectors, source coupling, splicing and connectors.

UNIT II

INDUSTRIAL APPLICATION OF OPTICAL FIBERS

Fiber optics instrumentation system - optical fiber sensors, Measurement of pressure, temperature, current, voltage and liquid level - fiber optic communication set up - different types of modulators - detectors.

UNIT III

LASER FUNDAMENTALS

Fundamental characteristics of lasers: laser rate equation - three level system - four level system - properties of laser beams - laser modes - resonator configuration - Q- switching and mode locking - cavity dumping - types of lasers: gas lasers, solid state lasers, liquid lasers and semiconductor lasers.

UNIT IV

INDUSTRIAL APPLICATION OF LASERS

Lasers for measurement of distance and length, velocity, acceleration, atmospheric effects, sonic boom, pollutants - material processing: laser heating, melting, welding and trimming of materials - removal and vaporization - calculation of power requirements of laser for material processing.

UNIT V

HOLOGRAM AND MEDICAL APPLICATIONS

Holography: basic principle, methods - holographic interferometry and application, holography for nondestructive - medical applications of lasers, laser and tissue interactive - laser instruments for surgery, removal of tumors of vocal cards, brain surgery, plastic surgery, gynaecology and oncology.

22OBT01 BIOFUELS 3003

Course Objectives

- To understand and explore the scope of biofuels the most efficient renewable source of energy.
- To develop the expertise in the technology pertaining to their generation and employment inorder to surrogate the existing conventional fuels and hence strives towards sustainable development
- To give way to the bolster green technology and incline towards more ecofriendly options.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Course Outcomes (COs)

- 1. Apply thee bio resources that can be used for the production of biofuels.
- 2. Analyze the physical and chemical properties of the biodiesel.
- 3. Analyze the mechanisms of improvising the quality and performance of engines using biofuels
- 4. Analyze the bio-fuel conversion technologies and their environmental attributes
- 5. Evaluate the designing aspects of major unit processes/operations of an integrated bio- refinery

Articulation Matrix

UNIT I

CLASSIFICATION AND RESOURCES

Introduction, biofuel as a renewable energy, classification of biofuels - First, second, third and fourth generation biofuels, different plant sources as biofuel feed stocks, Biogases, physical and chemical characteristics of vegetable oils - iodine number, hydroxyl, acid values, rancidity, hydrogenolysis and hydrolysis, Food vs energy.

BIODIESEL

Definition, basics and chemistry of biodiesel, vegetable oils in biodiesel production, Trans esterification: Chemical methods, enzymatic methods and types of catalysts, separation and purification, physical properties and characterization of biodiesel - Cloud point, pour point, cold filter plugging point, flash point, viscosity and cetane number.

UNIT III

QUALITY BIODIESEL AND ENVIRONMENT

Producing Quality Biodiesel, quality control, test methods, ASTM specifications. Oxidative andthermal stability, estimation of mono, di, triglycerides and free glycerol, engine performance test, blending of ethanol with biodiesel, blending of biodiesel with high speed diesel (HSD) and their combustion properties.

UNIT IV BIOETHANOL AND BIOGASES

Ethanol as a fuel, microbial and enzymatic production of ethanol from biomass - lignocellulose, sugarcane, sugar beet, corn, wheat starch, purification - wet and dry milling processes, saccharification-chemical and enzymatic. Production of bio methane and bio hydrogen.

UNIT V

BIOREFINERIES

Definition and types of biorefineries, co-products of biorefineries-oil cake and glycerol, purification of glycerol obtained in biodiesel plant; anaerobic and thermal gasification of biomass, economics of biorefineries.

22OPH01 NANOMATERIALS SCIENCE

Course Objectives

- Impart knowledge on Nanoscience
- Explore different techniques of producing nanomaterials
- Create expertise on the applications of nanomaterials in various fields

Programme Outcomes (POs)

- **PO1.** Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO2.** Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO3.** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO4.** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO5.** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **PO12.** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes (COs)

- 1. Analyze the origin and advance of nanomaterials and its classification
- 2. Compare the different types of methods adopted for synthesizing nanomaterials
- 3. Analyze the characterization techniques for analyzing nanomaterials
- 4. Analyze the physical properties exhibited by nanomaterials
- 5. Organize the nanomaterials developed for advanced technological applications

5	3	2	2	1	1	-	-	-	-	-	-	1	-	1

Articulation Matrix

UNIT I

NANO SCALE MATERIALS

Introduction - Feynman's vision - national nanotechnology initiative (NNI) - past, present, future - classification of nanostructures, nanoscale architecture - effects of the nanometer length scale - changes to the system total energy, and the system structures - effect of nanoscale dimensions on various properties - differences between bulk and nanomaterials and their physical properties.

UNIT II

NANOMATERIALS SYNTHESIS METHODS

Top down processes - mechanical milling, nanolithography and types based on radiations - Bottom up process physical method: physical vapour deposition, RF sputtering, CVD - chemical method: colloidal and sol-gel methods - template based growth of nanomaterials - ordering of nanosystems, self-assembly and self-organization.

9 Hours

9 Hours

3003

CHARACTERIZATION TECHNIQUES

General classification of characterization methods - analytical and imaging techniques - microscopy techniques - electron microscopy, scanning electron microscopy, transmission electron microscopy, atomic force microscopy - diffraction techniques - Xray spectroscopy - thermogravimetric analysis of nanomaterials.

UNIT IV

SEMICONDUCTOR NANOSTRUCTURES

Quantum confinement in semiconductor nanostructures - quantum wells, quantum wires, quantum dots, super lattices-epitaxial growth of nanostructures-MBE, metal organic VPE, LPE - carbon nanotubes- structure, synthesis and electrical properties applications - quantum well laser - quantum efficiency of semiconductor nanomaterials

UNIT V

NANOMACHINES AND NANODEVICES

Microelectromechanical systems (MEMS) and Nanoelectromechanical systems (NEMS) - fabrication, actuators-organic FETprinciple, description, requirements, integrated circuits- single electron transistor - organic photovoltaic cells - spintronics

Total: 45 Hours

22OPH02 SEMICONDUCTOR PHYSICS AND DEVICES

Course Objectives

- Impart knowledge in physical properties of semiconducting materials
- Analyze the factors affecting the operation of semiconductor devices
- Apply the physics of semiconductors to develop semiconductor devices

Programme Outcomes (POs)

- **PO1.** Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO2.** Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO3.** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO4.** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO5.** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- **PO12.** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes (COs)

- 1. Analyze the formation of drift current due to the movement of charge carriers under an electric field
- 2. Analyze the energy band diagram in thermal equilibrium and space charge width of PN junction
- 3. Analyze the operation of a Bipolar Junction Transistor (BJT) in active, cutoff, and saturation modes
- 4. Apply the principles of charge storage in floating-gate transistors for non-volatile memory applications
- 5. Outline the efficiency factors affecting the performance of opto-electronic devices

Articulation Matrix

5	3	2	2	1	1	-	-	-	-	-	-	1	-	-

UNIT I

ENERGY BANDS AND CARRIER TRANSPORT PROPERTIES

Energy Bands: Formation of energy bands - doping effects - energy levels - electron and hole concept in semiconductor. Carrier transport: Carrier drift-drift current density - conductivity- diffusion current density - total current density

UNIT II

P-N JUNCTION

Basic structure and fabrication process of p-n junction - current - voltage characteristics - energy band diagram - equilibrium Fermi levels - depletion region - junction breakdown phenomena - zener - avalanche breakdown.

9 Hours

9 Hours

3003

BIPOLAR JUNCTION TRANSISTOR

response and switching of bipolar transistor.

UNIT IV

MOSFET

The ideal MOS diode - basic fundamentals and characteristics - types - CMOS and BiCMOS - CMOS inverter - MOSFET on insulator - thin film transistor (TFT) - silicon on insulators (SOI) devices - MOS Memory structures - DRAM and SRAM.

The basic transistor action - operation in the active mode - current gain - static characteristics - carrier distribution in emitter, base and collector region - modes of operation - current - voltage characteristics of common base and emitter configuration - frequency

UNIT V

PHOTONIC DEVICES

Radiative transitions and optical absorption-light emitting diodes-organic LED - infrared LED - semiconductor laser - temperature effect - photo detector - photo diode - silicon and compound semiconductor solar cells – efficiency.

22OPH03 APPLIED LASER SCIENCE

Course Objectives

- Impart knowledge on laser science
- Explore different strategies for producing lasers
- Create expertise on the applications of lasers in various fields

Programme Outcomes (POs)

- **PO1.** Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO2.** Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO3.** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO4.** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO12.** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes (COs)

- 1. Analyze the role of energy levels and excitation processes in laser action
- 2. Compare the different types of lasers based on pumping method, active medium and energy levels
- 3. Compute the rotation of earth, velocity and distance using lasers and apply the same for day today applications
- 4. Analyze the role of lasers in surgical and endoscopy applications
- 5. Apply the laser techniques in industrial applications

Articulation Matrix

5	3	2	2	1	-	-	-	-	-	-	-	1	-	-

UNIT I

LASER FUNDAMENTALS

Introduction - principle - absorption and emission of light - thermal equilibrium - Einstein's prediction - Einstein's relations - A and B coefficients - condition for large stimulated emission - spontaneous and stimulated emission in optical region - light amplification - condition for light amplification - population inversion- Components of lasers - pumping methods - pumping mechanisms - optical resonator.

UNIT II

LASER BEAM CHARACTERISTICS AND TYPES

Characteristics of laser - Classification of lasers - principle, construction, working, energy level diagram and applications of molecular gas laser (CO_2 laser) - liquid laser (dye laser) - excimer laser - Solid state laser (Nd:YAG laser) - semiconductor laser (homojunction laser).

9 Hours

9 Hours

3003

LASERS IN SCIENCE

Introduction - Harmonic generation (SHG) - Stimulated Raman emission - lasers in chemistry - laser in nuclear energy - lasers and gravitational waves - rotation of the earth - measurement of distance - Light detection And Ranging (LIDER) - velocity measurement - holography.

UNIT IV

LASERS IN MEDICINE AND SURGERY

Light induced biological hazards: Eye and skin - Eye laser surgery - photocoagulations - homeostasis - dentistry - laser angioplasty - different laser therapies - advantages & disadvantages - laser endoscopy.

UNIT V

LASERS IN INDUSTRY

Applications in material processing: laser welding - hole drilling - laser cutting- Lasers in electronics industry: information storage - bar code scanner- Lasers in defence: laser based military weapons - laser walls.

220PH04 BIOPHOTONICS

Course Objective:

- To understand the light-matter interaction in biological cells or tissues by using the principles of optics and lasers.
- To apply the properties of biological cells or tissues in biomedical applications by various optical imaging, sensing and activation techniques.
- To analyze the concepts of Modern optical measurement techniques and devices in early detection of disease and cure them.

Programme Outcomes (POs)

- PO1. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

Course Outcomes (COs)

- 1. Analyze the fundamental laws of optics and their role in light interaction with biological cells and tissues
- 2. Apply the principles of light interaction with biological tissues to enhance imaging resolution and contrast
- 3. Use laser tweezers techniques to infer the activities of cells (tissues) and explain the single molecule detection processes in medical diagnosis.
- 4. Outline the properties of ultra short laser pulses and tissue engineering to rectify the affecting factors in biological cells.
- 5. Compare the various types of bio-imaging methods to detect the infected cells and molecules in biological science.

Unit I													9 H	lours

Unit I

INTRODUCTION TO BIOPHOTONICS

Light as Photon Particles - Coherence of light - lasers - classification of lasers - Mechanisms of Non-linear Optics (NLO) processes associated with Biophotonics - Light scattering mechanisms: Rayleigh scattering, Miescattering, Brillouin Scattering, Raman Scattering -Different light sources - Quantitative description of light: Radiometry

Unit II

9 Hours

PHOTOBIOLOGY

Interaction of light with cells and tissues - Light - TissueInteractionVariables - Light - Tissue Interaction Theory: Radiative Transport Theory - Photo process in biopolymers - In Vivo Photo excitation - photo-induced physical, chemical, thermal and mechanical effects in biological systems - Optical biopsy - Single molecule detection

18

Unit III BIONANO PHOTONICS

BIONANO PHOTONICS

Laser Microtools, Semiconductor quantum dots for bioimaging, Metallic nanoparticles and nanorods for biosensing - Optical biosensors: Fibre-Optic, evanescent wave, surface Plasmon resonance (SPR) based biosensors- biomaterials for photonics - Principle and design of laser tweezers - laser trapping and dissection for biological manipulation.

Basics of tissue optics: Light absorption and scattering in tissues, Wavelength effects and spectra - the therapeutic window, Light penetration intissues - Absorbing agents in tissues and blood - Skinoptics, response the UV radiation, Optical parameter soft issue - tissue welding - tissue contouring - tissuer generation - Femto laser surgery - low level light therapy and photo dynamic therapy

Unit IV

TISSUE ENGINEERING WITH LIGHT

Unit V

BIO-IMAGING TECHNIQUES AND ITS APPLICATIONS

An overview of optical imaging - Fluorescence Microscopy - Scanning Microscopy - Invivo Confocal Microscopy - Multi photon Microscopy - Optical Coherence Tomography (OCT) - Fluorescence Resonance Energy Transfer (FRET) imaging - fluorescence lifetime imaging Microscopy (FLIM) - Nonlinear optical imaging - Coherent Anti - stokes Raman Scattering - Bioimaging Applications.

LASER SAFETY (only Self-study purpose not for the course credit)

Laser radiation hazards including effects on the eye and skin, Maximum Permissible exposure (MPE), Laser Hazard classification

22OPH05 PHYSICS OF SOFT MATTER

Course Objectives

- To recognize the properties of soft matter and hard matter
- To understand the fundamental interactions of colloids and gels
- To explain the structure and phase behavior of liquid crystals and supra molecules
- To summarize the soft matter properties of structures and components of life

Programme Outcomes (POs)

- PO1. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

- 1. Analyze the structural and mechanical differences between soft matter and hard matter
- 2. Exemplify the fundamental interactions and stability of colloids and gels
- 3. Analyze the optical and electro-optical properties of liquid crystals used in display technologies
- 4. Outline the aggregation and phase behavior of surfactants, polymers, copolymers and block copolymers
- 5. Analyze the soft matter behavior of nucleic acids, proteins, polysaccharides and membranes

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

5	2	2	-	-	-	-	-	-	-	-	-	-	-	-

UNIT I

CONDENSED MATTER

Intermolecular forces-Condensation and freezing-mechanical response: Hookean solid - Newtonian liquid - visco elasticity. Glasses: relaxation time – viscosity - glass forming liquids. Soft matter: length scales-fluctuations and Brownian motion

UNIT II

COLLOIDAL DISPERSIONS & GELS

Forces between colloidal particles: vander Waals forces-electrostatic double layer forces - steric hindrance-depletion interactions. Stability and phase behaviour: Crystallisation - strong colloids - weak colloids. Physical and chemical gels-classical theory of gelation - elasticity of gels

UNIT III LIQUID CRYSTALS

Liquid crystal phases - distortions and topological defects - electrical and magnetic properties - polymer liquid crystals - Fredricks transition and liquid crystal displays

UNIT IV

SUPRAMOLECULAR SELF ASSEMBLY

Aggragation and phase separation - types of micelles - bilayers and vesicles. Phase behaviour of concentrated surfactant solutionsphase separation in polymers, copolymers and block copolymers

22OCH01 CORROSION SCIENCE AND ENGINEERING

3003

Course Objectives

- · Analyse the loss incurred due to corrosion in different sectors and terminologies related to corrosion
- Identify forms and types of corrosion with suitable mechanism
- Apply various methods of corrosion control, corrosion testing and monitoring

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Course Outcomes (COs)

- 1. Apply fundamental principles of corrosion science to calculate corrosion rates, analyze metal degradation and interpret Pourbaix diagrams to predict corrosion behavior in various industrial environments.
- 2. Compare different corrosion types on metals when exposed to air, water and at high temperatures (> 100 C)
- 3. Analyze the mechanism of corrosion on steel, iron, zinc and copper metal surfaces
- 4. Analyze the rate of corrosion on metals using electrochemical methods of testing
- 5. Analyze the correct materials, design and operation conditions to reduce the likelihood of corrosion in new equipment and constructions

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

5	3	3	-	-	-	-	1	-	-	-	-	-	-	-

Articulation Matrix

UNIT I CORROSION

Importance of corrosion - spontaneity of corrosion - units of corrosion rate (mdd and mpy) - direct and indirectdamage by corrosion - importance of corrosion prevention in industries - Pilling Bedworth ratio and its significance - passivation - area relationship in both active and passive states of metals - Pourbaix digrams of Mg, Al and Fe and their advantages and disadvantages

UNIT II

TYPES OF CORROSION

Eight forms of corrosion: uniform, galvanic, crevice corrosion, pitting, intergranular corrosion, selective leaching, erosion corrosion and stress corrosion-Catastrophic oxidation corrosion

UNIT III

MECHANISM OF CORROSION

Hydrogen embrittlement - corrosion fatigue - filiform corrosion - fretting damage and microbes induced corrosion. Corrosion mechanism on steel, iron, zinc and copper metal surfaces

9 Hours

9 Hours

7 Hours

18

UNIT IV

CORROSION RATE AND ITS ESTIMATION

Rate of corrosion: Factors affecting corrosion. Electrochemical methods of polarization: Tafel extrapolation polarization and linear polarization. Weight loss method - testing for intergranular susceptibility and stress corrosion. Non destructive testing methods: Visual testing - liquid penetrant testing - magnetic particle testing

- Ultrasonic monitoring, and eddy current testing

UNIT V

CORROSION CONTROL METHODS

Fundamentals of cathodic protection - types of cathodic protection(sacrificial anodic and impressed current cathodic protection). Stray current corrosion, problems and its prevention. Protective coatings: Metal coatings: Hot dipping (galvanizing, tinning and metal cladding) - natural inhibitors. Selection of suitable design for corrosion control

10 Hours

22OCH02 POLYMER SCIENCE

3003

Course Objectives

- Explain the properties of different polymers with its mechanism
- Select the appropriate polymerization techniques to synthesize the polymers
- Identify suitable polymers for various industrial applications

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences

PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Course Outcomes (COs)

- 1. Apply knowledge of polymerization mechanisms to predict the formation of different polymer products under various reaction conditions and catalysts
- 2. Apply suitable polymerization techniques to synthesize the high quality polymers
- 3. Apply the structural, thermal, and mechanical properties of polymers for different industrial applications
- 4. Apply the polymer processing methods to design polymer products
- 5. Analyze the polymers used in electronic and biomedical applications.

Articulation Matrix

5	1	3	2	-	-	-	_	-	-	-	-	-	-	-

UNIT I

POLYMERS AND ELASTOMERS

Classification of polymers - Mechanism: Addition polymerization - free radical, cationic, anionic and co- ordination (Ziegler-Natta) polymerization - copolymerization - condensation polymerization (nylon-6,6) -ring opening polymerization (nylon-6). Elastomers: Natural rubber and synthetic rubber: styrene -butadiene rubber (SBR), butyl, neoprene, thiocol rubbers. High performance polymers: polyethers, polyether ether ketone (PEEK), polysulphones and polyimides

UNIT II

POLYMERIZATION TECHNIQUES

Homogeneous and heterogeneous polymerization - bulk polymerization (PMMA, PVC) - solution polymerization - polyacrylic acid, suspension polymerization (ion-exchange resins) - emulsion polymerization (SBR) - advantages and disadvantages of bulk and emulsion polymerization. Melt solution and interfacial poly-condensation

UNIT III

CHARACTERIZATION AND TESTING

Characterization of polymers by Infrared Spectroscopy (IR) and Nuclear Magnetic Spectroscopy (NMR) - Thermal properties: TGA and DSC - Testing tensile strength - Izod impact - Compressive strength - Rockwellhardness - Vicot softening point - water absorption

10 Hours

8 Hours
UNIT IV POLYMER PROCESSING

Moulding: Compression - injection - extrusion and blow mouldings. Film casting - calendering. Thermoforming and vacuum formed polystyrene - foamed polyurethanes. Fibre spinning: melt, dry and wet spinning. Fibre reinforced plastics fabrication: hand-layup - filament winding and pultrusion

UNIT V

SPECIALITY POLYMERS

Preparation and properties of heat resistant and flame retardant polymers. Polymers for electronic applications: liquid crystalline, conducting and photosensitive polymers – E waste management. Polymer for biomedical applications: artificial organs, controlled drug delivery, Scaffolds in tissue Engineering –waste management.

22OCH03 ENERGY STORING DEVICES

Course Objectives

- Compare the energy density of commercialized primary and secondary batteries.
- Classify the fuel cells and compare their efficiency in different environmental conditions.
- Demonstrate the various energy storage devices and fuel cells.

Programme Outcomes (POs)

PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Course Outcomes (COs)

- 1. Apply the parameters required for operation of a cell to evaluate the capacity of energy storage devices.
- 2. Compare the electrodes, electrolyte and cell reactions of different types of primary, secondary batteries and infer the selection criteria for commercial battery systems with respect to commercial applications.
- 3. Analyze fuel cells based on its construction, production of current and applications.
- 4. Analyze the methods of storing hydrogen fuel with its environmental applications.
- 5. Analyze the future prospects of renewable energy, hydrogen economy, and the efficiency of various generations of solar cells in energy production.

UNIT I

BASICS OF CELLS AND BATTERIES

Components - classification - operation of a cell - theoretical cell voltage - capacity - specific energy - energy density of lithium and lead acid battery - charge efficiency- charge rate - charge retention - closed circuit voltage - open circuit voltage current density - cycle life - discharge rate-over charge-over discharge

UNIT II

BATTERIES FOR PORTABLE DEVICES AND ELECTRIC VEHICLES

Primary batteries: zinc-carbon - magnesium, and mercuric oxide - recycling/safe disposal of used cells. Secondary batteries: lead acid - nickel-cadmium - lithium ion batteries - rechargeable zinc alkaline battery. Reserve batteries: Zinc-silver oxide - lithium anode cell - photogalvanic cells. Battery specifications for cars and automobiles. Extraction of metals from battery materials.

3003

6 Hours

UNIT III TVPES OF FUEL CEL

TYPES OF FUEL CELLS

Importance and classification of fuel cells: Description, working principle, components, applications and environmental aspects of the following types of fuel cells: alkaline fuel cells - phosphoric acid - solid oxide - molten carbonate and direct methanol fuel cells

UNIT IV

HYDROGEN AS A FUEL

Sources and production of hydrogen: Electrolysis and photocatalytic water splitting. Methods of hydrogen storage: High pressurized gas - liquid hydrogen type - metal hydride. Hydrogen as engine fuel - features, application of hydrogen technologies in the future – limitations.

UNIT V

ENERGY AND ENVIRONMENT

Future prospects of renewable energy and efficiency of renewable fuels - economy of hydrogen energy. Solar Cells: First, second, third and fourth generation solar cell - photobiochemical conversion cell.

Total: 45 Hours

22OMA01 GRAPH THEORY AND COMBINATORICS

3003

Course Objectives

- This course comprehends the graphs as a modeling and analysis tool in computer science & Engineering
- It introduces the structures such as graphs & trees and techniques of counting and combinations, which are needed in number theory based computing and network security studies in Computer Science.

Programme Outcomes (POs)

PO1 Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO 2 Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

- 1. Apply the basic ideas of Graph and its characteristics.
- 2. Assess the characteristics of trees and its properties.
- 3. Predict the coloring of graphs and its applications in the respective areas of engineering.
- 4. Compute the permutations and combinations in the engineering field.
- 5. Demonstrate the types of generating functions and their applications in engineering.

5	3	3	-	-	-	-	-	-	-	-	-	-	-	-	-

UNIT I

INTRODUCTION

Graphs - Introduction - Isomorphism - Sub graphs - Walks, Paths, Circuits - Connectedness - Components - Euler graphs - Hamiltonian paths and circuits - Trees - Properties of trees - Distance and centers in tree - Rooted and binary trees.

UNIT II

TREES, CONNECTIVITY

Spanning trees - Fundamental circuits - Spanning trees in a weighted graph - cut sets - Properties of cut set - All cut sets - Fundamental circuits and cut sets - Connectivity and separability - Network flows - 1- Isomorphism - 2-Isomorphism - Combinational and geometric graphs - Planer graphs - Different representation of a planer graph.

UNIT III

MATRICES, COLOURING AND DIRECTED GRAPH

Chromatic number - Chromatic partitioning - Chromatic polynomial - Matching - Covering - Four color problem - Directed graphs - Types of directed graphs - Digraphs and binary relations - Directed paths and connectedness - Euler graphs.

9 Hours

9 Hours

9 Hours

PERMUTATIONS

Fundamental principles of counting - Permutations and combinations - Binomial theorem - combinations with repetition -Combinatorial numbers - Principle of inclusion and exclusion - Derangements - Arrangements with forbidden positions.

UNIT V

GENERATING FUNCTIONS

Generating functions - Partitions of integers - Exponential generating function - Summation operator - Recurrence relations - First order and second order - Non-homogeneous recurrence relations - Method of generating functions.

22OGE01 PRINCIPLES OF MANAGEMENT

Course Objectives

- To develop cognizance about importance of management principles.
- Extract the functions and responsibilities of managers.
- To Study and understand the various HR related activities.
- Learn the application of the theories in an organization.
- Analyze the position of self and company goals towards business.

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Course Outcomes (COs)

- 1. Students will be able to understand the basic concepts of Management.
- 2. Have some basic knowledge on planning process and its Tools & Techniques.
- 3. Ability to understand management concept of organizing and staffing.
- 4. Ability to understand management concept of directing.
- 5. Ability to understand management concept of controlling.

220GE02 ENTREPRENEURSHIP DEVELOPMENT I

Course Objectives

- Learn the basics and scope of the Entrepreneurship
- Understand the generation of ideas of the Entrepreneurship ٠
- Evolve the legal aspects of the business
- Learn to analyze the various business finance ٠
- Learn the basics of the Operations Management •

Programme Outcomes (POs)

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. **Course Outcomes (COs)**

- 1. Analyze the role of entrepreneurship in economic development.
- 2. Explain the types of ideas that to be used for entrepreneurship development.
- 3. Examine the legal aspects of business and its association.
- 4. Examine the sources of business and its analysis.
- 5. Analyse the different modes of operation management.

22OGE03 ENTREPRENEURSHIP DEVELOPMENT II 3003

Course Objectives

- Evolve the marketing mix for promotion the product / services
- Handle the human resources and taxation
- Learn to analyze the taxation
- Understand the Government industrial policies and supports
- Preparation of a business plan

Programme Outcomes (POs)

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. **Course Outcomes (COs)**

- 1. Examine the strategies and plans in marketing management.
- 2. Analyse the cases involved in human resource management.
- 3. Classify the direct and indirect taxes in business.
- 4. Analyze the supports given by government for improving the business.
- 5. Examine the various steps involved in preparing the business plan.

220GE04 NATION BUILDING, LEADERSHIP AND SOCIAL RESPONSIBILITY

20

9 Hours

Total: 45 Hours

Course Objectives

- To understand the importance of National Integration, Patriotism and Communal Harmony
- To outline the basic awareness about the significance of soft skills in professional and inter-personal communications and facilitate an all-round development of personality
- To analyze the different types of responsibility role of play for the improvement of society

Programme Outcomes (POs)

a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

g. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need

for sustainable development.

1. Life-long learning: Recognize the need for, and have the preparation and ability to engage in

independent and life-long learning in the broadest context of technological change.

Course Outcomes (COs)

- 6. Apply the understanding of religion-cultural diversity of the country and its impact on the lives of the people and their beliefs
- 7. Build a sense of responsibility, smartness in appearance and improve self confidence
- 8. Develop the sense of self-less social service for better social & community life
- 9. Apply the importance of Physical and Mental health and structure of communication organization and various mode of communication
- 10. Analyze the organizational structure, entry modes, and operational roles of Indian armed forces, CAPF, and NCC while developing leadership capabilities.
