VISION OF THE DEPARTMENT

To be a leading center of excellence in computer science education and business technology, empowering students to become highly skilled professionals, innovative problem solvers, and ethical leaders in the rapidly evolving digital world.

MISSION OF THE DEPARTMENT

- To excel in technology and business, fostering innovation, interdisciplinary collaboration and ethical leadership in preparation for a digital future.
- To provide a stimulating environment that encourages creativity, critical thinking, and problem-solving, empowering students to develop solutions and drive industry advancements.
- To cultivate a culture of innovation, risk-taking, and business acumen, enabling our students to launch successful start-ups or contribute to entrepreneurial endeavors.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOS)

- I. To perform well in their professional career by acquiring enough knowledge, technical competency in the domain of Computer Science and Business Systems to concord the industry engrossment.
- II. To improve communication skills, business management skills, follow professional ethics and involve in team work in their profession.
- III. To update themselves in business level innovation with societal consideration.

PROGRAMME OUTCOMES (POS)

Engineering Graduates will be able to:

- a. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- f. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

- g. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- h. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- i. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- j. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- k. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- l. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

1. To demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values
2. To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

ONE CREDIT COURSES										
22CB0XA	CRUD Operations in Mobile Technology	-	-	-	1	-	100	0	100	EEC
22CB0XB	AI on Edge Computing	-	-	-	1	-	100	0	100	EEC

- ES - Engineering Sciences
- HSS - Humanities and Social Sciences
- PC - Professional Core
- PE - Professional Elective
- EEC - Employability Enhancement Course
- CA - Continuous Assessment
- ES - End Semester Examination

Course Objectives

- Understand the basic concepts of propositions by various discrete structure techniques.
- Analyse the combinatorics techniques in solving the system by various methodology.
- Apply the different differential and integral techniques in solving the real time engineering problems.

Programme Outcomes (POs)

a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

1. Formulate short proofs using the following methods: direct proof, indirect proof and proof by contradiction.
2. Represent characteristics of Sets, Group, Ring and Field.
3. Interpret the concepts of Permutations, Combinations and Mathematical induction
4. Apply the language of graphs and trees to the real world problems.
5. Apply formalised arguments to clarify and assess real-world arguments

Articulation Matrix

3	2	1												
4	2	2												
5	1	2												

UNIT I**9 Hours****BOOLEAN ALGEBRA**

Introduction of Boolean algebra, truth table, basic logic gate, basic postulates of Boolean algebra, principle of duality, canonical form, Karnaugh map.

UNIT II**9 Hours****ABSTRACT ALGEBRA**

Set, relation, group, ring, field.

UNIT III**9 Hours****COMBINATORICS**

Basic counting, balls and bins problems, generating functions, recurrence relations. Proof techniques, principle of mathematical induction, pigeonhole principle.

UNIT IV**9 Hours****GRAPH THEORY**

Graphs and digraphs, complement, isomorphism, connectedness and reachability, adjacency matrix, Eulerian paths and circuits in graphs and digraphs, Hamiltonian paths and circuits in graphs and

tournaments, trees; Planar graphs, Eulers formula, dual of a planer graph, independence number and clique number, chromatic number, statement of Four-color theorem.

UNIT V

9 Hours

LOGIC

Propositional calculus - propositions and connectives, syntax; Semantics – truth assignments and truth tables, validity and satisfiability, tautology; Adequate set of connectives; Equivalence and normal forms; Compactness and resolution; Formal reducibility - natural deduction system and axiom system; Soundness and completeness.

FOR FURTHER READING

Functions -Types of Functions- Composition of relation and functions- Inverse functions

Total: 45 Hours

22CB102

PROBABILITY AND STATISTICS

3 0 0 3

Course Objectives

- Understand the basic concepts of probability and the distributions with characteristics of one and two dimensional random variables
- Analyze the various data by different statistical sampling techniques.
- Develop enough confidence to identify and model mathematical patterns in real world and offer appropriate solutions, using the skills learned in their interactive and supporting environment.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

1. Demonstrate and apply the basic probability axioms and concepts in their core areas of random phenomena
2. Execute the concepts of probability distributions in an appropriate place of science and Engineering.
3. Exemplify the basics concepts of statistics through various representations of data
4. Analyze the various collections of data in science / engineering problems using statistical inference techniques
5. Apply differential and integral calculus concepts to calculate the area and volume by appropriate vector integral theorems.

5	1	3												

UNIT I

9 Hours

PROBABILITY AND MOMENTS

Probability: Concept of experiments, sample space, event. Definition of Combinatorial Probability, Conditional Probability, Bayes Theorem. Expected values and moments: mathematical expectation and its properties, Moments (including variance) and their properties, Moment generating function.

UNIT II

9 Hours

PROBABILITY DISTRIBUTIONS

Discrete Probability distributions: Binomial, Poisson and Geometric distributions. Continuous Probability distributions: Uniform, Exponential, Normal, Chi-square, t and F distributions.

UNIT III

9 Hours

STATISTICS

Introduction to Statistics: Definition of Statistics. Basic objectives, Applications in various branches of science with examples. Collection of Data: Internal and external data, Primary and secondary Data. Population and sample, Representative sample.

UNIT IV

9 Hours

DESCRIPTIVE STATISTICS

Descriptive Statistics: Classification and tabulation of uni variate data, graphical representation, Frequency curves. Descriptive measures - central tendency and dispersion. Bivariate data. Summarization, marginal and conditional frequency distribution.

UNIT V

9 Hours

CALCULUS

Basic concepts of Differential and integral calculus, application of double and triple integral.

FOR FURTHER READING

Collections of data and use the testing of hypothesis to analyze the Design of experiments.

Total: 45 Hours

5. A.M. Mood, F.A. Graybill and D.C. Boes, Introduction to the Theory of Statistics, 3rd Edition, Tata Mc Graw Hill Education, 1973

Course Objectives

- Understand the characteristics of simple and damped harmonic motion and illustrate the interference, diffraction and polarization of light.
- Exemplify the dual nature of matter and apply the Schrodinger wave equation to determine the wave function of particle in one dimensional box and assess the crystallographic parameters of seven crystal systems.
- Compare the different types of lasers based on pumping method, active medium and energy levels and analyze the laws of thermodynamics and different thermodynamic processes.

Programme Outcomes (POs)

a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

i. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Course Outcomes (COs)

1. Explain the different types of harmonic oscillations and compare electrical oscillator with mechanical oscillator.
2. Illustrate the interference, diffraction and polarization of light in Newton's rings, diffraction grating and double refraction respectively.
3. Apply the concepts of quantum mechanics to solve the Schrodinger time dependent and time independent wave equations.
4. Assess the crystallographic parameters of seven crystal systems and compare the unit cell characteristics of SC, BCC, FCC and HCP crystal structures.
5. Outline the different types of lasers and compare the different types of optical fibers based on mode and refractive index profile for data communication system.

Articulation Matrix

2	2	2							1					
3	2	2							2					
4	1	2							2					
5	2	1							1					

UNIT I**6 Hours****OSCILLATIONS**

Periodic motion-simple harmonic motion-characteristics of simple harmonic motion-vibration of simple springs mass system. Resonance-definition., damped harmonic oscillator - heavy, critical and light damping, energy decay in a damped harmonic oscillator, quality factor, forced mechanical and electrical oscillators

UNIT II **6 Hours**

CLASSICAL OPTICS

Theory of interference fringes-types of interference- Fresnels prism- Newtons rings, Diffraction-Two kinds of diffraction-Difference between interference and diffraction Fresnels half period zone and zone plate-Fraunhofer diffraction at single slit-plane diffraction grating. Temporal and Spatial Coherence. Polarization - Concept of production of polarized beam of light from two SHM acting at right angle; plane, elliptical and circularly polarized light, Brewsters law, double refraction. Basics ideas of electromagnetism- maxwell equations

UNIT III **6 Hours**

QUANTUM PHYSICS

Dual nature of matter - development of quantum theory- de-Broglie wavelength - Heisenberg uncertainty principle - Schrodingers wave equation: time dependent and time independent wave equations - physical significance of wave function - application: particle in one dimensional box.

UNIT IV **6 Hours**

CRYSTAL PHYSICS

Crystalline and amorphous materials - lattice - space lattice point - basis - UNIT cell - crystal systems - Bravais lattices - Miller indices - "d" spacing in cubic lattice - calculation of number of atoms per unit cell, atomic radius, coordination number and packing density for SC, BCC, FCC and HCP structures - classification of solids - basic concept of band theory.

UNIT V **6 Hours**

MODERN OPTICS

Energy levels - principle of laser - characteristics of laser radiation - Einsteins coefficients- population inversion - optical pumping - pumping mechanisms - types of laser - Neodymium laser - CO2 laser - homo junction GaAs laser- laser speckles - applications of lasers in engineering - Fiber optics - principle - structure of an optical fiber- types of optical fibers - applications.

FOR FURTHER READING

Zeroth law of thermodynamics - heat - equilibrium and quasistatic process - path functions -comparison between heat and work - internal energy - first law of thermodynamics - isothermal and adiabatic process - work done - reversible and irreversible process - Carnot ideal engine and its efficiency - Carnots theorem - actual heat engine- second law of thermodynamics - entropy - enthalpy.

1 **4 Hours**

EXPERIMENT 1

Magnetic field along the axis of current carrying coil -Stewart and Gee

2 **4 Hours**

EXPERIMENT 2

Determination of Hall coefficient of semi-conductor

3 **4 Hours**

EXPERIMENT 3

Determination of Plank constant

4 **4 Hours**

EXPERIMENT 4

Determination of wavelength of light by Laser diffraction method

5 **4 Hours**

EXPERIMENT 5

Determination of wavelength of light by Newton's Ring method

6 **5 Hours**

EXPERIMENT 6

Determination of laser and Optical Fiber parameters

7 **5 Hours**

EXPERIMENT 7

Determination of Stefan's constant

Total: 30+30 =60 Hours

PRINCIPLES OF ELECTRICAL ENGINEERING

2 0 2 4

Course Objectives

- To understand the basic concepts of electric circuits
- To understand the basic concepts of magnetic circuits.
- To identify the types of sensors and measure quantities in AC and DC systems

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Understand the basic concepts and terminology of electrical quantities
2. Analyze the DC circuit using various network theorems
3. analyze the electrical parameters of AC circuits with R-L-C elements.
4. Analyze the Static and dynamic characteristics of Electro-static and Electromagnetic fields.
5. Apply the concept of sensors in measurement of various electrical quantities

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	1	3		1										1
3	1	3		1										1
4	1	2		1										1
5	1	1	1		2								1	2

UNIT I

6 Hours

INTRODUCTION

Concept of Potential difference, voltage, current, Fundamental linear passive and active elements to their functional current-voltage relation, Terminology and symbols in order to describe electric networks, Concept of work, power, energy and conversion of energy.

UNIT II

6 Hours

DC CIRCUITS

Current-voltage relations of electric network by mathematical equations to analyse the network (Thevenins theorem, Norton-s Theorem, Maximum Power Transfer theorem) voltage source and current sources, ideal and practical, Kirchhoff-s laws and applications to network solutions using mesh analysis, Simplifications of networks using series- parallel, Star/Delta transformation. Superposition theorem.

UNIT III

6 Hours

AC CIRCUITS

AC waveform definitions, form factor, peak factor, study of R-L, R-C, RLC series circuit, R-L-C parallel circuit, phasor representation in polar and rectangular form, concept of impedance, admittance, active, reactive, apparent and complex power, power factor, 3 phase Balanced AC Circuits.

UNIT IV

6 Hours

ELECTROSTATIC AND ELECTRO-MECHANICS

Electrostatic field, electric field intensity, electric field strength, absolute permittivity, relative permittivity, permittivity, capacitor composite, dielectric capacitors, capacitors in series& parallel, energy stored in capacitors, charging and discharging of capacitors, Electricity and Magnetism, magnetic field and faradays law, self and mutual inductance, Amperes law, Magnetic circuit, Single phase transformer, principle of operation, EMF equation, voltage ratio, current ratio, KVA rating, efficiency and regulation, Electromechanical energy conversion.

UNIT V**6 Hours****MEASUREMENTS AND SENSORS**

Introduction to measuring devices/sensors and transducers related to electrical signals, Elementary methods for the measurement of electrical quantities in DC and AC systems and their practical application. Electrical Wiring and Illumination system: Basic layout of distribution system, Types of Wiring System & Wiring Accessories, Necessity of earthing, Types of earthing, Different types of lamps (Incandescent, Fluorescent, Sodium Vapour, Mercury Vapour, Metal Halide, CFL, LED)

FOR FURTHER READING

Principle of batteries, types, construction and application, Magnetic material and B-H Curve, Basic concept of indicating and integrating instruments.

1**4 Hours****EXPERIMENT 1**

Familiarization of electrical Elements, sources, measuring devices and transducers related to electrical circuits

2**4 Hours****EXPERIMENT 2**

Determination of resistance temperature coefficient

3**4 Hours****EXPERIMENT 3**

Verification of Network Theorem (Superposition, Thevenin, Norton, Maximum Power Transfer theorem)

4**4 Hours****EXPERIMENT 4**

Simulation of R-L-C series circuits for $X_L > X_C$, $X_L < X_C$

5**5 Hours****EXPERIMENT 5**

Simulation of Time response of RC circuit

6**4 Hours****EXPERIMENT 6**

Verification of relation in between voltage and current in three phase balanced star and delta connected loads.

7**5 Hours****EXPERIMENT 7**

Demonstration of measurement of electrical quantities in DC and AC systems.

Total: 30+30 =60 Hours**Reference(s)**

BUSINESS COMMUNICATION AND VALUE SCIENCE-I

1 0 2 2

Course Objectives

- Augment students overall communication and interpersonal skills by engaging them in group activities and thus aid in helping them to emerge as professionals.
- Focus on the development of basic fluency in English, usage of words and also introduce them to the concept and importance of interpersonal skills so as to effectively present their personalities.

Programme Outcomes (POs)

- i. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- j. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- k. Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Course Outcomes (COs)

1. Speak fluently in English without errors in tenses and hence present themselves as effective English communicators. They will be able to learn the 12 tenses and use them appropriately.
2. Differentiate between active and passive vocabulary and be able to use the 60 words discussed in class for their daily conversation and 40 words also given as assignments
3. The ability to process their ideas and thoughts (verbal communication) into written communication in an effective, coherent and logical manner within a stipulated time and specific word limit of 100-150 words for paragraph writing
4. Present them in a certain manner by using the 50-55 phrases discussed in class appropriately for group discussions, personal interviews during the campus recruitment process/competitive exams.
5. Enhance their communication skills by acquainting with the 2 important aspects of communication and helping them to overcome the 10 most common barriers of communication.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1									1					
2									2					
3									3					
4										1	1			
5										2	2			

UNIT I

3 Hours

ESSENTIAL GRAMMAR I

Tenses: Basic forms and use, sentence formation (general & Technical), Common errors, Parts of speech through context, Direct and reported speech structures and voices. Vocabulary Enrichment: Exposure to words from General Service List (GSL) by West, Academic word list (AWL) technical specific terms related to the field of technology, phrases, idioms, significant abbreviations formal business vocabulary Phonetic: Pronunciation, Reduction of MTI in spoken English, Question formation with emphasis on common errors made during conversation

UNIT II

3 Hours

WRITTEN COMMUNICATION-I

Letter Writing -Formal and Informal letter writing, application letters, Report writing academic and business report, Job application letter

UNIT III

3 Hours

COMMUNICATION SKILLS

Importance of effective communication, types of communication- verbal and non - verbal, barriers of communication, effective communication, Listening Skills: Law of nature- Importance of listening skills, Difference between listening and hearing, Types of listening.

UNIT IV

3 Hours

SELF - AWARENESS

Self - Assessment, Self - Appraisal, SWOT, Goal setting - Personal & career- Self-Assessment, Self-Awareness, Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Self-Esteem, Self - appraisal, Personal Goal setting, Career Planning, Personal success factors, Handling failure, Depression and Habit, relating SWOT analysis & goal setting, and prioritization. Socio-Cultural and Cross-Cultural Sensitivities at the Workplace: What is Inclusion? Women's contributions in Industry, work issues faced by women, what is sexual harassment, what is appropriate behavior for everyone at work

UNIT V

3 Hours

INTERPERSONAL SKILLS I

Team work, Team effectiveness, Group discussion, Decision making - Team Communication. Team, Conflict Resolution, Team Goal Setting, Team Motivation Understanding Team Development, Team Problem Solving, Building the team dynamics. Multicultural team activity Time Management: The Time management matrix, apply the Pareto Principle (80/20 Rule) to time management issues, to prioritize using decision matrices, to beat the most common time wasters, how to plan, how to handle interruptions, to maximize your personal effectiveness, how to say no to Time wasters Values of a good manager: Understanding Corporate Values and behavior; Personal / Human Values; Pride and grace in Nationalist

22CB106 **PROBLEM SOLVING USING C** **3 0 2 4**

Course Objectives

- Understand the basics of problem-solving methods and programming languages.
- Gain knowledge about the different primitive and user defined data types
- Impart knowledge about the structural programming concepts

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

Course Outcomes (COs)

1. Explore the basics of problem solving.
2. Develop programs using control statements.
3. Implement the concepts of functions.
4. Exemplify the concepts of Arrays and pointers.
5. Explore the concepts of structures and basics of linux system interface.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	1	2			2									
3	1	2			2									
4	1	2			2									
5	1	2			2									

UNIT I **9 Hours**

GENERAL PROBLEM SOLVING CONCEPTS AND IMPERATIVE LANGUAGE

Algorithm, and Flowchart for problem solving with Sequential Logic Structure, Decisions and Loops. Imperative languages: Introduction to imperative language; syntax and constructs of a specific language (ANSI C) .Types Operator and Expressions with discussion of variable naming and Hungarian Notation: Variable Names, Data Type and Sizes (Little Endian Big Endian), Constants, Declarations, Arithmetic Operators, Relational Operators, Logical Operators, Type Conversion, Increment Decrement Operators, Bitwise Operators, Assignment Operators and Expressions, Precedence and Order of Evaluation, proper variable naming and Hungarian Notation

UNIT II **9 Hours**

CONTROL FLOW WITH DISCUSSION ON STRUCTURED AND UNSTRUCTURED PROGRAMMING

Statements and Blocks, If-Else-If, Switch, Loops while, do, for, break and continue, Goto Labels, structured and un- structured programming.

UNIT III **9 Hours**

FUNCTIONS AND PROGRAM STRUCTURE WITH DISCUSSION ON STANDARD LIBRARY

Basics of functions, parameter passing and returning type, C main return as integer, External, Auto, Local, Static, Register Variables, Scope Rules, Block structure, Initialization, Recursion, Preprocessor, Standard Library Functions and return types

UNIT IV **9 Hours**

POINTERS AND ARRAYS

Pointers and address, Pointers and Function Arguments, Pointers and Arrays, Address Arithmetic, character Pointers and Functions, Pointer Arrays, Pointer to Pointer, Multi-dimensional array and Row/column major formats, Initialisation of Pointer Arrays, Command line arguments, Pointer to functions, complicated declarations and how they are evaluated.

UNIT V **9 Hours**

STRUCTURES

Basic Structures, Structures and Functions, Array of structures, Pointer of structures, Self-referral Structures, Table look up, Typedef, Unions, Bit-fields Input and Output: Standard I/O, Formatted Output printf, Formated Input scanf, Variable length argument list, file access including FILE structure, fopen, stdin, sdtout and stderr, Error Handling including exit, perror and error.h, Line I/O, related miscellaneous functions

FOR FURTHER READING

Unix system Interface: File Descriptor, Low level I/O read and write, Open, create, close and unlink, Random access lseek, Discussions on Listing Directory, Storage allocator Programming Method: Debugging, Macro, User Defined Header, User Defined Library Function, makefile utility.

1 **3 Hours**

EXPERIMENT 1

Algorithm and flowcharts of small problems like GCD

2 **3 Hours**

EXPERIMENT 2

Structured code writing with C

3 **3 Hours**

EXPERIMENT 3

Small but tricky codes

4		3 Hours
EXPERIMENT 4	Proper parameter passing	
5		3 Hours

STARTUP MANAGEMENT

1 0 2 2

Course Objectives

- Promote entrepreneurial spirit and motivate to build startups
- Provide insights on markets and the dynamics of buyer behaviour
- Train to develop prototypes and refine them to a viable market offering
- Support in developing marketing strategies and financial outlay
- Enable to scale up the prototypes to commercial market offering

Course Outcomes (COs)

1. Generate valid and feasible business ideas
2. Create Business Model Canvas and formulate positioning statement

3. Invent prototypes that fulfils an unmet market need
4. Formulate business strategies and create pitch decks
5. Choose appropriate strategies for commercialization

Articulation Matrix

6. Elizabeth Verkey and Jithin Saji Isaac, Intellectual Property, Eastern Book Company, 2nd Edition, 2021

Course Objectives

- Understand the basic concepts of matrices and their Eigen values and Eigen vectors to solve the system of equations.
- Analyze the system of vectors by different vector space techniques.
- Apply the concepts of linear algebra in the field of computer science.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

1. Represent characteristics of matrices and determinants with their properties.
2. Analyze the characteristics of a linear system with Eigen values and vectors.
3. Implement the various matrix techniques in solving the system of linear equations.
4. Identify the vector spaces to represent the systems geometrically.
5. Analyze the systems by vector space techniques.

UNIT I**9 Hours****MATRICES**

Determinants - Properties of determinants - Matrices - Operations in matrices - Hermitian and unitary matrices - Rank of a matrix - Solution of system of Linear equations: Cramers rule - Matrix Inversion method - Rank method.

UNIT II**9 Hours****EIGEN VALUES AND EIGEN VECTORS**

Eigen Values and Eigen Vectors of a real matrix - Properties of Eigen Values- Cayley - Hamilton Theorem.

UNIT III**9 Hours****MATRIX DECOMPOSITION**

Positive definite matrix -Gauss Elimination method - Gauss Jordan method - LU decomposition - Singular value decomposition.

UNIT IV**9 Hours****VECTOR SPACES**

Vector spaces - Sub spaces - Linear combinations and linear system of equations - Linear independence and linear dependence - Linear Transformations - Basis and dimensions.

UNIT V**9 Hours****INNER PRODUCT SPACES**

Principal component analysis- Orthogonality of vectors - Projections - Gram-Schmidt orthogonalization - QR decomposition- introduction to their applications in Image Processing and Machine learning

22CB202**STATISTICAL METHODS****3 0 0 3****Course Objectives**

- Learn the fundamental concepts of linear statistical models, estimation methods, Non parametric inference
- Understand the fundamental concepts of programming in R

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

1. Understand the basic concepts of Statistical techniques and Linear Statistical methods.
2. Understand the basic concepts of Design of experiments and Methods of Estimation
3. Understand the basic concepts of non parametric inference in testing of hypothesis
4. Understand the concepts of time series analysis and Forecasting techniques in Statistical Modeling
5. Understand the introductory R language with fundamental concepts, major R data analysis and create visualizations using R.

UNIT I

9 Hours

SAMPLING TECHNIQUES

Random sampling-Sampling from finite and infinite populations- Estimates and standard error (sampling with replacement and sampling without replacement)- Sampling distribution of sample mean- Stratified random sampling. Linear Statistical Models: Linear regression -Correlation- Rank correlation

UNIT II

9 Hours

DESIGN OF EXPERIMENTS AND ESTIMATION

Analysis of variance - Completely randomized design - Randomized block design. Estimation: Point estimation- criteria for good estimates (un-biasedness, consistency)- Methods of estimation including maximum likelihood estimation. Sufficient Statistic- Complete sufficiency- application in estimation

UNIT III

9 Hours

NON-PARAMETRIC INFERENCE

Comparison with parametric inference- Use of order statistics-Sign test- Wilcoxon signed rank test- Mann-Whitney test- Run test- Kolmogorov-Smirnov test. Spearman's and Kendall's test- Tolerance region

UNIT IV

9 Hours

TIME SERIES ANALYSIS

Basics of Time Series Analysis- Stationary- ARIMA Models: Least Square method and maximum likelihood Identification - Estimation - Forecasting

UNIT V

9 Hours

R STATISTICAL PROGRAMMING LANGUAGE

Introduction to R- Functions- Control flow and Loops- Working with Vectors and Matrices- Reading in Data- Writing Data- Working with Data- Manipulating Data- Simulation- Linear model-Data Frame- Graphics in R

FOR FURTHER READING

Analysis of Variance: Latin Square Method - 2^2 Factorial Design and Testing of Hypothesis - Neyman Pearson lemma.

DATA STRUCTURES

3 0 2 4

Course Objectives

- Understand the basics of abstract data types.
- Impart knowledge about the principles of linear and nonlinear data structures.
- Build an application using sorting and searching.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.
- n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Explore the basics of data structures and algorithm analysis.
2. Demonstrate the concept of linear data structures.
3. Demonstrate the concept of non- linear data structures.
4. Design algorithms for various searching and sorting techniques.
5. Exemplify the concept of files and its operations

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

4	2	3	3		2								2	3
5	2	3	3		2								2	3

UNIT I

9 Hours

BASIC TERMINOLOGIES

Algorithm specification, Recursion, Performance analysis, Asymptotic Notation - The Big-O, Omega and Theta notation, Programming Style, Refinement of Coding - Time-Space Trade Off, Testing, Data Abstraction

UNIT II

9 Hours

LINEAR DATA STRUCTURE

Array, Stack, Queue, Linked-list and its types, Various Representations, Operations & Applications of Linear Data Structures

UNIT III

9 Hours

NON-LINEAR DATA STRUCTURE

Trees (Binary Tree, Threaded Binary Tree, Binary Search Tree, B & B+ Tree, AVL Tree, Splay Tree) and Graphs (Directed, Undirected), Various Representations, Operations (search and traversal algorithms and complexity analysis) & Applications of Non-linear Data Structures

UNIT IV

9 Hours

SEARCHING AND SORTING ON VARIOUS DATA STRUCTURES

Sequential Search, Binary Search, Breadth First Search, Depth First Search, Insertion Sort, Selection Sort, Shell Sort, Divide and Conquer Sort, Merge Sort, Quick Sort, Heap Sort.

UNIT V

9 Hours

FILES

Definition, File Organization: Sequential file Organization, Direct file Organization, Indexed Sequential, Hashed and accessing schemes

1

5 Hours

EXPERIMENT 1

Towers of Hanoi using user defined stacks.

2

5 Hours

EXPERIMENT 2

Reading, writing, and addition of polynomials.

3

5 Hours

EXPERIMENT 3

Line editors with line count, word count showing on the screen.

4 **5 Hours**
EXPERIMENT 4
Trees with all operations

5 **5 Hours**
EXPERIMENT 5
All graph algorithms.

6 **5 Hours**
EXPERIMENT 6
Saving / retrieving non-linear data structure in/from a file

Total: 45+30 =75 Hours

22CB204 **PRINCIPLES OF ELECTRONICS** **3 0 2 4**

Course Objectives

- Understand about current, voltage and power, basic laws in circuits.
- Understand about semiconductor materials and its application
- Understand working principal of BJT and FET
- Understand about Integrated circuit and its application
- Understand about the fundamentals of Electronics and its applications.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

1. Apply Voltage-Current laws and transformation techniques to solve linear electric circuits.
2. Apply the diodes in rectifier and regulator applications and also analyze its characteristics.
3. Explain the working of Bipolar Junction and Field Effect Transistors with different configurations and also analyze their characteristics.
4. Illustrate the working of analog IC with different configurations and its applications.
5. Simplification of Boolean expressions using K-map and implementation of combinational & sequential circuits.

Articulation Matrix

1	2	2												
2	3	2												
3	2	2												
4	3	2												
5	2	2												

UNIT I

6 Hours

ELECTRIC CIRCUITS

Definition of Voltage, Current, Power & Energy, Ohmslaw, Kirchoffs Law & its applications simple problems, Simple mesh and Node problems, Generation of Alternative EMF, Average value of current and voltage, Form Factor, Peak Factor.

UNIT II

9 Hours

SEMICONDUCTOR DIODE AND ITS APPLICATION

Conductor, Semiconductors & Insulators, Semiconductors: intrinsic & extrinsic, energy band diagram, P&N-type semiconductors, drift & diffusion carriers. Characteristics of PN Junction Diode and Zener diode, Rectifier Circuits Half wave, Full wave circuits, Efficiency, PIV, Ripple factor and AC and DC current and voltage in rectifier.

UNIT III

10 Hours

BIPOLAR JUNCTION AND FIELD EFFECT TRANSISTOR

Structure and working of bipolar junction transistor, CB, CC, CE configurations, relation between alpha and beta, Concept of transistor as an amplifier and transistor as a switch, Field Effect Transistors: Construction and characteristics of JFET-parameters of JFET-MOSFET – Depletion & enhancement modes Construction and characteristics

UNIT IV

10 Hours

FEED BACK AMPLIFIER, AND OPERATIONAL AMPLIFIERS

Concept (Block diagram), properties, positive and negative feedback, loop gain, open loop gain, feedback factors, Introduction to integrated circuits: operational amplifier and its terminal properties; Application of operational amplifier; inverting and non-inverting mode of operation, Adders, Subtractors, Voltage follower, Comparator, Integrator, Differentiator

UNIT V

10 Hours

DIGITAL ELECTRONICS FUNDAMENTALS

Difference between analog and digital signals, Boolean algebra, Basic and Universal Gates, Symbols, Truth tables, logic expressions, Logic simplification using K- map, Logic ICs, half and full adder/subtractor, multiplexers, demultiplexers, flip-flops, shift registers, counters.

1

3 Hours

EXPERIMENT 1

To plot V-I characteristics of PN junction diode.

<p>2 EXPERIMENT 2 To plot regulation characteristics of half wave rectifier</p>	<p>3 Hours</p>
<p>3 EXPERIMENT 3 To plot regulation characteristics of Full wave rectifier</p>	<p>3 Hours</p>
<p>4 EXPERIMENT 4 To plot input-output characteristics of CE configuration of BJT.</p>	<p>3 Hours</p>
<p>5 EXPERIMENT 5 To study Biasing techniques of BJT- to find stability factor of self-bias, collector to base bias, fixed bias circuits.</p>	<p>3 Hours</p>
<p>6 EXPERIMENT 6 To plot frequency response of single stage FET amplifier (CS/CD configuration) and find its bandwidth.</p>	<p>3 Hours</p>
<p>7 EXPERIMENT 7 To study Colpitts Oscillator.</p>	<p>3 Hours</p>
<p>8 EXPERIMENT 8 Study of OP-AMP circuits: Inverting and Non-inverting Amplifier.</p>	<p>3 Hours</p>
<p>9 EXPERIMENT 9 Study of basic logic gates and De-Morgan's Theorem.</p>	<p>3 Hours</p>
<p>10 EXPERIMENT 10 Study of half adder and full adder.</p>	<p>3 Hours</p>

Total: 45+30 =75 Hours

Course Objectives

- Exemplify the demand curves of households and supply curves of firms with the principles.
- Differentiate Price ceilings, price floors and compare income effects, substitute effects
- Analyze the Keynesian's process of multiplier theory in macro economics

Programme Outcomes (POs)

f. The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

g. Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. To explain the functioning of elasticity of demand in micro economics.
2. To analyze the supporting of price, income and substitution effects in the consumers and producer's surplus.
3. To compare the equilibrium of a firm under perfect competition, monopoly and monopolistic competition.
4. To study the concepts of demand for money and supply of money with appropriate model in macro economic analysis.
5. To examine and evaluate the problems of voluntary and involuntary unemployment

Articulation Matrix

UNIT I**6 Hours****MICRO ECONOMICS**

Principles of Demand and Supply Supply Curves of Firms Elasticity of Supply; Demand Curves of Households Elasticity of Demand; Equilibrium and Comparative Statics (Shift of a Curve and Movement along the Curve);

UNIT II**6 Hours****WELFARE ANALYSIS**

Consumers and Producers Surplus- Price Ceilings and Price Floors; Consumer Behaviour - Axioms of Choice-Budget Constraints and Indifference Curves; Consumers Equilibrium Effects of a Price Change, Income and Substitution Effects Derivation of a Demand Curve

UNIT III **6 Hours**

APPLICATIONS

Tax and Subsidies - Inter temporal Consumption -Suppliers- Income Effect; Theory of Production - Production Function and Isoquants - Cost Minimization; Cost Curves - Total, Average and Marginal Costs - Long Run and Short Run Costs; Equilibrium of a Firm Under Perfect Competition; Monopoly and Monopolistic Competition

UNIT IV **6 Hours**

MACRO ECONOMICS

National Income and its Components - GNP, NNP, GDP, NDP Consumption Function; Investment; Simple Keynesian Model of Income Determination and the Keynesian Multiplier; Government Sector -Taxes and Subsidies; External Sector - Exports and Imports; Money -Definitions; Demand for Money Transaction and Speculative Demand; Supply of Money - Banks Credit Creation Multiplier; Integrating Money and Commodity Markets - IS, LM Model

UNIT V **6 Hours**

BUSINESS CYCLES AND STABILIZATION

Monetary and Fiscal Policy - Central Bank and the Government; the Classical Paradigm - Price and Wage Rigidities - Voluntary and Involuntary Unemployment

FURTHER READING

Monetary and Fiscal Policy - Central Bank and the Government; the Classical Paradigm - Price and Wage Rigidities - Voluntary and Involuntary Unemployment

22HS206 BUSINESS COMMUNICATION AND VALUE SCIENCE -II 1 0 2 2

Course Objectives

- Augment students overall communication and interpersonal skills by engaging them in group activities and thus aid in helping them to emerge as professionals.
- Develop students expertise on public speaking skills and to deal positively with criticism and so as to effectively present their personalities

Programme Outcomes (POs)

- i. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- j. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

1. Speak fluently in English without errors in the sentence construction and hence present themselves as effective English communicators. They will be able to learn 20-25 common errors made in parts of speech and also use 10 modal verbs efficiently during professional communication.
2. Differentiate between vocabulary used as adjectives, verbs and adverbs and be able to use the 60-70 words for their daily conversation.
3. Overcome the fear of speaking and will be aware of the 3 types of public speaking necessary according to the contemporary requirements. They would be able to deliver a public speech according to the need of the audience and also be aware of positive body language to be manifested during a speech.
4. Deal with the deeper parameters of working in teams like team motivation, multicultural team activity and team conflict resolution
5. Analyze them relating to their hobbies and strengths and hence set realistic goals in terms of personal and professional growth. They will be able to identify at least 5-7 strengths and a couple of goals to be achieved that will enable their lives to be directed appropriately.

3									3					
4										1				
5										2				

UNIT I

3 Hours

ESSENTIAL GRAMMAR - II

Application of tenses, Auxiliaries- correct usage and importance in formal communication, Business Vocabulary - Vocabulary exercises through web-based applications. Written Communication - II: Email writing- Formal and Informal, email writing structure, Inquiry letters, Instruction letters, complaint letters, Routine business letters, Sales Letters etc. Technical writing, Essay writing, Paragraph writing.

UNIT II

3 Hours

VOCABULARY - II

Vocabulary exercises through web-based applications, Usage and application through mock meetings Situational Conversation: Application of grammar and correct spoken English according to context/ situation and application in business scenario.

UNIT III

3 Hours

FUNDAMENTALS OF EFFECTIVE COMMUNICATION

Public Speaking: fundamentals of effective public speaking, types- Extempore speech, manuscript speech, and ways to enhance public speaking skills, storytelling, oral review. Presentation Skills: PowerPoint presentations, Effective ways to structure the presentation, importance of body language. Leadership Skills, Leader's Role, Responsibilities And Skill Required: Understanding good Leadership behaviours, Learning the difference between Leadership and Management, Gaining insight into your Patterns, Beliefs and Rules, Defining Qualities and Strengths of leadership, Determining how well you perceive what's going on around you, interpersonal Skills and Communication Skills, Learning about

Commitment and How to Move Things Forward, Making Key Decisions, Handling Your and Other People's Stress, Empowering, Motivating and Inspiring Others, Leading by example, effective feedback. Problem Solving Skill: Problem solving skill, Confidence building

UNIT IV

3 Hours

CORPORATE / BUSINESS ETIQUETTES

Corporate grooming & dressing, etiquettes in social & office Setting-Understand the importance of professional behaviour at the work place, Understand and Implement etiquettes in workplace, presenting oneself with finesse and making others comfortable in a business setting. Importance of first impression, Grooming, Wardrobe, Introduction to Ethics in engineering and ethical reasoning, rights and responsibilities

UNIT V

3 Hours

DIVERSITY AND INCLUSION PART II

Socio-Cultural and Cross-Cultural Sensitivities at the Workplace: PwD and LGBT at the workplace, Learning disabilities at the workplace; Caste, class, regionalism, religion and poverty: the different identities of Indian employees and employers and how to include everyone; Global diversity identities of race, religion, nationhood; Appropriate Social Media Use Values Sciences Part II: Values of a good manager: Ethics in Business; Embodying organizational pride with grace

1

2 Hours

EXPERIMENT 1

Module 1: Self-Introduction

2

2 Hours

EXPERIMENT 2

Module 2: Likes, Dislikes, and Social goals (strengths, ambition)

3

2 Hours

EXPERIMENT 3

Module 3: Offering opinions (GD, disagreeing politely, accepting opinions)

4

2 Hours

EXPERIMENT 4

Module 4: Asking questions (Formal writing, formal events)

5

2 Hours

EXPERIMENT 5

Module 5: Answering questions (politeness markers)

6

2 Hours

EXPERIMENT 6

Module 6: Asking permission (leave, OD)

7

2 Hours

EXPERIMENT 7

Module 7: Communication etiquette (Telephone, E-mail)

8	2 Hours
EXPERIMENT 8	
Module 8: Banks/ Reservation/ Application forms (Travel) (why would you like to join the course? Self-expression- Writing)	
9	2 Hours
EXPERIMENT 9	
Module 9: Constructive criticism, respond to compliment	
10	2 Hours
EXPERIMENT 10	
Module 10: Convincing (Interactive group game) and persuading (literature, Debate)	
11	2 Hours
EXPERIMENT 11	
Module 11: Accepting	
12	2 Hours
EXPERIMENT 12	
Module 12: Narration with Discourse Markers and connectives (offer a commentary on a research project, compare and contrast-writing skills)	
13	2 Hours
EXPERIMENT 13	
Module 13: Description with describing markers (story mapping, mind mapping, create a web page to sell own product, write food, film reviews, creating hashtags)	
14	2 Hours
EXPERIMENT 14	
Module 14: Public events (MoC, Welcome address, Vote of Thanks, Body Language)	
15	2 Hours
EXPERIMENT 15	
Module 15: Seminar/ Presentation	
Total: 15+30 =45 Hours	

Reference(s)

1. Business Communication Today by Bovee, Thill, Raina
2. APAART: Speak Well 1 (English Language and Communication)
3. APAART: Speak Well 2 (Soft Skills)
4. Strategic Communication by Charles Marsh
5. English vocabulary in use Alan Mccarthy and Odell
6. Business Communication Dr. Saroj Hiremath

Course Objectives

1. Describe the linguistic diversity in India, highlighting Dravidian languages and their features.
2. Summarize the evolution of art, highlighting key transitions from rock art to modern sculptures.
3. Examine the role of sports and games in promoting cultural values and community bonding.
4. Discuss the education and literacy systems during the Sangam Age and their impact.
5. Outline the importance of inscriptions, manuscripts, and the print history of Tamil books in preserving knowledge and culture.

Course Outcomes (COs)

1. Understand the concept of language families in India, with a focus on Dravidian languages.
2. Trace the evolution of art from ancient rock art to modern sculptures in Tamil heritage.
3. Identify and differentiate various forms of folk and martial arts in Tamil heritage.
4. Understand the concepts of Flora and Fauna in Tamil culture and literature.
5. Evaluate the contributions of Tamils to the Indian Freedom Struggle.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1									2	3				
2									2	3				
3									2	3				
4									2	3				
5									2	3				

UNIT I**3 Hours****LANGUAGE AND LITERATURE**

Language Families in India - Dravidian Languages – Tamil as a Classical Language – Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature - Management Principles in Thirukural - Tamil Epics and Impact of Buddhism & Jainism in Tamil Land - Bakthi Literature Azhwars and Nayanmars - Forms of minor Poetry - Development of Modern literature in Tamil - Contribution of Bharathiyar and Bharathidhasan.

UNIT II**3 Hours****HERITAGE - ROCK ART PAINTINGS TO MODERN ART – SCULPTURE**

Hero stone to modern sculpture - Bronze icons - Tribes and their handicrafts - Art of temple car making - Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments - Mridhangam, Parai, Veenai, Yazh and Nadhaswaram - Role of Temples in Social and Economic Life of Tamils.

UNIT III**3 Hours****FOLK AND MARTIAL ARTS**

Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leather puppetry, Silambattam, Valari, Tiger dance - Sports and Games of Tamils.

UNIT IV**3 Hours****THINAI CONCEPT OF TAMILS**

Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature - Aram Concept of Tamils - Education and Literacy during Sangam Age - Ancient Cities and Ports of Sangam Age - Export and Import during Sangam Age - Overseas Conquest of Cholas.

UNIT V**3 Hours****CONTRIBUTION OF TAMILS TO INDIAN NATIONAL MOVEMENT AND INDIAN CULTURE**

Contribution of Tamils to Indian Freedom Struggle - The Cultural Influence of Tamils over the other parts of India – Self-Respect Movement - Role of Siddha Medicine in Indigenous Systems of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.

22HS003**தமிழர் மரபு****1 0 0 1****பாடத்திட்டத்தின் நோக்கம்**

1. இந்திய மொழிக்குடும்பத்துள் திராவிட மொழிகள் தனித்து இயங்கும் தன்மையை அதன் சிறப்புகள் வழி அறிதல்.
2. தொன்றுதொட்டு தமிழர், கலையில் அடைந்த வளர்ச்சியை இயம்புதல்.
3. சங்ககால தமிழரின் கற்றல் திறத்தை இலக்கியங்கள் வழி ஆராய்தல்.

கற்றலின் விளைவு

1. இந்திய மொழிக்குடும்பத்துள் திராவிட மொழிகள் தனித்து இயங்கும் தன்மையை அதன் சிறப்புகள் வழி அறிதல்.
2. தொன்றுதொட்டு தமிழர், கலையில் அடைந்த வளர்ச்சியை இயம்புதல்.
3. சங்ககால தமிழரின் கற்றல் திறத்தை இலக்கியங்கள் வழி ஆராய்தல்.

4. தமிழ் மொழியின் சிறப்புகளை அதன் படைப்பிலக்கியங்கள் மூலம் அறிந்து கொள்ளுதல்.
5. கற்காலம் தொடங்கி, இக்காலம் வரை சிற்பக்கலை அடைந்த வளர்ச்சியை கண்டுகொள்ளல் .
6. தமிழர் தம் வாழ்வில் எங்கனம் இயற்கையை வணங்கி போற்றினர் என்பதை திணை கோட்பாட்டின் வழி தெளிதல்.
7. இந்திய விடுதலை போரில் தமிழர் ஆற்றிய பங்கினை தெரிந்து கொள்ளுதல்.

அலகு I மொழி மற்றும் இலக்கியம்: 3
 இந்திய மொழிக் குடும்பங்கள் - திராவிட மொழிகள் - தமிழ் ஒரு செம்மொழி - தமிழ் செவ்விலக்கியங்கள் - சங்க இலக்கியத்தின் சமயச் சார்பற்ற தன்மை - சங்க இலக்கியத்தில் பகிர்தல் அறம் - திருக்குறளில் மேலாண்மைக் கருத்துக்கள் - தமிழ்க் காப்பியங்கள், தமிழகத்தில் சமண பௌத்த சமயங்களின் தாக்கம் - பக்தி இலக்கியம், ஆழ்வார்கள் மற்றும் நாயன்மார்கள் - சிற்றிலக்கியங்கள் - தமிழில் நவீன இலக்கியத்தின் வளர்ச்சி - தமிழ் இலக்கிய வளர்ச்சியில் பாரதியார் மற்றும் பாரதிதாசன் ஆகியோரின் பங்களிப்பு.

அலகு II மரபு - பாறை ஓவியங்கள் முதல் நவீன ஓவியங்கள் வரை - சிற்பக் கலை: 3
 நடுகல் முதல் நவீன சிற்பங்கள் வரை - ஐம்பொன் சிலைகள்- பழங்குடியினர் மற்றும் அவர்கள் தயாரிக்கும் கைவினைப் பொருட்கள், பொம்மைகள் - தேர் செய்யும் கலை - சுடுமண் சிற்பங்கள் - நாட்டுப்புறத் தெய்வங்கள் - குமரிமுனையில் திருவள்ளூர் சிலை - இசைக் கருவிகள் - மிருதங்கம், பறை, வீணை, யாழ், நாதஸ்வரம் - தமிழர்களின் சமூக பொருளாதார வாழ்வில் கோவில்களின் பங்கு.

அலகு III நாட்டுப்புறக் கலைகள் மற்றும் வீர விளையாட்டுகள்: 3
 தெருக்கூத்து, கரகாட்டம், வில்லுப்பாட்டு, கணியான் கூத்து, ஓயிலாட்டம், தோல்பாவைக் கூத்து, சிலம்பாட்டம், வளரி, புலியாட்டம், தமிழர்களின் விளையாட்டுகள்.

அலகு IV தமிழர்களின் திணைக் கோட்பாடுகள்: 3
 தமிழகத்தின் தாவரங்களும், விலங்குகளும் - தொல்காப்பியம் மற்றும் சங்க இலக்கியத்தில் அகம் மற்றும் புறக் கோட்பாடுகள் - தமிழர்கள் போற்றிய அறக்கோட்பாடு - சங்ககாலத்தில் தமிழகத்தில் எழுத்தறிவும், கல்வியும் - சங்ககால நகரங்களும் துறை முகங்களும் - சங்ககாலத்தில் ஏற்றுமதி மற்றும் இறக்குமதி - கடல்கடந்த நாடுகளில் சோழர்களின் வெற்றி.

அலகு V இந்திய தேசிய இயக்கம் மற்றும் இந்திய பண்பாட்டிற்குத் தமிழர்களின் பங்களிப்பு: 3
 இந்திய விடுதலைப்போரில் தமிழர்களின் பங்கு - இந்தியாவின் பிறப்புகுதிகளில் தமிழ்ப் பண்பாட்டின் தாக்கம் - சுயமரியாதை இயக்கம் - இந்திய மருத்துவத்தில், சித்த மருத்துவத்தின் பங்கு - கல்வெட்டுகள், கையெழுத்துப்படிக்கள் - தமிழ்ப் புத்தகங்களின் அச்சு வரலாறு.

TOTAL : 15 PERIODS

TEXT-CUM-REFERENCE BOOKS

1. தமிழக வரலாறு – மக்களும் பண்பாடும் – கே.கே. பிள்ளை (வெளியீடு: தமிழ்நாடு பாடநூல் மற்றும் கல்வியியல் பணிகள் கழகம்).
2. கணினித் தமிழ் – முனைவர் இல. சுந்தரம். (விகடன் பிரசுரம்).
3. கீழடி – வைகை நதிக்கரையில் சங்ககால நகர நாகரிகம் (தொல்லியல் துறை வெளியீடு)
4. பொருறை – ஆற்றங்கரை நாகரிகம். (தொல்லியல் துறை வெளியீடு)
5. Social Life of Tamils (Dr.K.K.Pillay) A joint publication of TNTB & ESC and RMRL – (in print)

7. Historical Heritage of the Tamils (Dr.S.V.Subatamanian, Dr.K.D. Thirunavukkarasu) (Published by: International Institute of Tamil Studies).
8. The Contributions of the Tamils to Indian Culture (Dr.M.Valarmathi) (Published by: International Institute of Tamil Studies.)
9. Keeladi - 'Sangam City Civilization on the banks of river Vaigai' (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu)
10. Studies in the History of India with Special Reference to Tamil Nadu (Dr.K.K.Pillay) (Published by: The Author)
11. Porunai Civilization (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu)
12. Journey of Civilization Indus to Vaigai (R.Balakrishnan) (Published by: RMRL) – Reference Book.

Course Objectives

- Understand different formal language classes and their relationships
- Construct the mathematical models and grammars to recognize formal languages
- Analyse the undecidability and complexity of computational problems

Programme Outcomes (POs)

a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

1. Design finite automata to recognize regular languages and prove their equivalence
2. Construct push down automata to accept context free languages and prove their equivalence
3. Generate Linear bounded automata and Turing Machines for a given computation and languages
4. Analyse the undecidability of languages
5. Examine the problems based on their complexity

Articulation Matrix

1	3	3												
2		2												
3	2	2												
4	2	2												
5	2	3												

UNIT I**10 Hours****REGULAR LANGUAGES AND FINITE AUTOMATA**

Alphabet-languages and grammars- Productions and derivation-Chomsky hierarchy of languages. Regular expressions and languages- Deterministic Finite Automata (DFA) and equivalence with regular expressions-Nondeterministic Finite Automata (NFA) and equivalence with DFA- Regular grammars and equivalence with finite automata - Properties of regular languages - Kleene's theorem - Pumping lemma for regular languages- Myhill- Nerode theorem and its uses- Minimization of finite automata.

UNIT II**10 Hours****II CONTEXT-FREE LANGUAGES AND PUSHDOWN AUTOMATA**

Context-free grammars (CFG) and languages (CFL)- Chomsky and Greibach normal forms - Nondeterministic pushdown automata (PDA) and equivalence with CFG - Parse trees- Ambiguity in CFG - Pumping lemma for context-free languages - Deterministic pushdown automata- Closure properties of CFLs.

UNIT III**10 Hours****TURING MACHINES**

Context-sensitive grammars (CSG) and languages - Linear bounded automata and equivalence with CSG.

The basic model for Turing machines (TM) - Turing recognizable (recursively enumerable) and Turing-decidable (recursive) languages and their closure properties - Variants of Turing machines - Nondeterministic TMs and equivalence with deterministic TMs - Unrestricted grammars and equivalence with Turing machines - TMs as enumerators.

UNIT IV**8 Hours****UNDECIDABILITY**

Church-Turing thesis - Universal Turing machine - The universal and diagonalization languages - Reduction between languages- Rice's theorem - Undecidable problems about languages.

UNIT V**7 Hours****COMPLEXITY THEORY**

Introductory ideas on Time complexity of deterministic and nondeterministic Turing machines - P and NP, NP-completeness - Cook's Theorem, other NP-complete problems.

FOR FURTHER READING

Applications of finite automata - string matching algorithms, network protocols and lexical analyzers - Common parsing algorithms - Cellular automata

Total: 45+15 =60 Hours**Reference(s)**

22CB302**COMPUTER ORGANIZATION AND ARCHITECTURE****3 0 0 3****Course Objectives**

- Understand of the basic structure and operation of a digital computer.
- Impart knowledge about the operation of the arithmetic unit including the algorithms & implementation addition, subtraction, multiplication & division.
- Acquire knowledge about the diverse ways of communicating with I/O devices and standard I/O Interfaces.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Identify the basic structure of a digital computer and instruction sets with addressing modes.
2. Illustrate the arithmetic operations of binary number system with its design.
3. Recognize the organization of the basic processing unit and examine the basic concepts of pipelining.
4. Explicate the standard I/O interfaces and peripheral devices.
5. Determine the performance of different types of memory.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	3	2	1											1
2	1	2	3										1	
3	1	1	2											
4	1	2	3											
5	1	2	2											

UNIT I

9 Hours

COMPUTER ARCHITECTURE

Functional blocks of a computer: CPU, memory, input-output subsystems, control unit. Instruction set architecture of a CPU: Registers, instruction execution cycle, RTL interpretation of instructions, addressing modes, instruction set. Outlining instruction sets of some common CPUs. Data representation: Signed number representation, fixed and floating point representations, character representation.

UNIT II

9 Hours

COMPUTER ARITHMETIC

Integer addition and subtraction, ripple carry adder, carry look-ahead adder, etc. multiplication: shift-and-add, Booth multiplier, carry save multiplier, etc. Division restoring and non-restoring techniques, floating point arithmetic, IEEE 754 format.

UNIT III

9 Hours

CONTROL UNIT AND PIPELINING

Introduction to x86 architecture. CPU control unit design: Hardwired and micro-programmed design approaches, design of a simple hypothetical CPU. Pipelining: Basic concepts of pipelining, throughput and speedup, pipeline hazards. Parallel Processors: Introduction to parallel processors, Concurrent access to memory and cache coherency.

UNIT IV

9 Hours

PERIPHERAL DEVICES AND THEIR CHARACTERISTICS

Input-output subsystems, I/O device interface, I/O transfers program controlled, interrupt driven and DMA, privileged and non-privileged instructions, software interrupts and exceptions. Programs and processes: role of interrupts in process state transitions, I/O device interfaces: SCII, USB.

UNIT V**9 Hours****MEMORY ORGANIZATION AND SYSTEM DESIGN**

Memory interleaving, concept of hierarchical memory organization, cache memory, cache size vs. block size, mapping functions, replacement algorithms, write policies. Memory system design: Semiconductor memory technologies, memory organization.

Total: 45 Hours**Reference(s)**

22CB303**OBJECT ORIENTED PROGRAMMING****3 0 2 4****Course Objectives**

- Understand the features of Object oriented programming
- Recognize the need of the concepts inheritance and polymorphism
- Develop C++ applications using OOP concepts, files, templates and exceptions

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

Course Outcomes (COs)

1. Differentiate Structured programming and Object Oriented Programming
2. Interpret the features of object oriented programming and basic structure of C++ program.
3. Illustrate operator overloading, Inheritance and virtual functions
4. Develop applications with concepts of files, templates and exceptions.
5. Understand Object Oriented Design and Modeling

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2	3			1								1	
2	1	1	2		2								1	
3	1	2	2		2								1	
4	1	2	3		2									
5	2	1	2		2									

UNIT I

9 Hours

INTRODUCTION TO OBJECT ORIENTED PROGRAMMING

Single line comments, Local variable declaration within function scope, function declaration, function overloading, stronger type checking, Reference variable, parameter passing -value vs reference, passing pointer by value or reference, Operator new and delete, the typecasting operator, Inline Functions in contrast to macro, default arguments

UNIT II

9 Hours

CONCEPTS OF OBJECT ORIENTED PROGRAMMING

Necessity for OOP, Data Hiding, Data Abstraction, Encapsulation, Procedural Abstraction, Class and Object, Scope of Class and Scope Resolution Operator, Member Function of a Class, private, protected and public Access Specifier, this Keyword, Constructors and Destructors, friend class, error handling (exception)

UNIT III

9 Hours

ESSENTIALS OF OBJECT ORIENTED PROGRAMMING

Operator overloading, Inheritance, Single and Multiple, Class Hierarchy, Pointers to Objects, Assignment of an Object to another Object, Polymorphism through dynamic binding, Virtual Functions, Overloading, overriding and hiding

UNIT IV

9 Hours

FILES, I/O AND GENERIC PROGRAMMING

Streams, Files, Library functions, formatted output Template concept, class template, function template, template specialization

UNIT V

9 Hours

OBJECT ORIENTED DESIGN AND MODELING

UML concept, Use case for requirement capturing, Class diagram, Activity diagram and Sequence Diagram for design, Corresponding C++ code from design.

1

5 Hours

EXPERIMENT 1

Implementation of classes and objects with constructors and destructors.

2

5 Hours

EXPERIMENT 2

Implementation of operator and function overloading.

3

5 Hours

EXPERIMENT 3

Implementation of types of Inheritance.

4 **5 Hours**

EXPERIMENT 4

Implementation of two different classes for adding a private data member using friend function.

5 **5 Hours**

EXPERIMENT 5

Implementation of file handling operations.

6 **5 Hours**

EXPERIMENT 6

Implementation of templates and UML diagrams.

Total: 45+30 =75 Hours

COMPUTATIONAL STATISTICS

3 0 2 4

Course Objectives

- Learn the fundamental concepts of computational statistical models, multivariate regression, Principal component analysis
- Understand the fundamental concepts of Python , Data aggregation and Visualization in Python

Programme Outcomes (POs)

a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

1. Understand the basic concepts of Statistical techniques and multivariate regression models.
2. Understand the basic concepts of Discriminant analysis and Principal component analysis
3. Understand the concepts of factor analysis and segmentation analysis
4. Understand the introductory ,concepts of Python and Data wrangling techniques in Computational Statistics
5. Understand the fundamental concepts of data aggregation and create visualizations using Python

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2	2												
2	1	3												
3	2	3												
4	2	2												
5	2	3												

UNIT I

9 Hours

MULTIVARIATE NORMAL DISTRIBUTION AND MULTIVARIATE REGRESSION

Multivariate Normal Distribution- Multivariate Normal Distribution- Conditional Distribution- Estimation of parameters. Multiple Linear Regression Model- Standard multiple regression models collinearity- outliers, non-normality and autocorrelation. Multivariate Regression- Parameter estimation- Multivariate Analysis of variance and covariance

UNIT II

9 Hours

DISCRIMINANT ANALYSIS AND PRINCIPAL COMPONENT ANALYSIS

Discriminant Analysis- Statistical background, linear discriminant function analysis- Estimating linear discriminant functions and their properties. Principal Component Analysis- Principal components- Algorithm for conducting principal component analysis- H-plot

UNIT III

9 Hours

FACTOR ANALYSIS AND SEGMENTATION ANALYSIS

Factor Analysis- Factor analysis model, Extracting common factors, determining number of factors, Transformation of factor analysis solutions, Factor scores. Clustering and Segmentation Analysis- Introduction, Types of clustering, Correlations and distances, clustering by partitioning methods, hierarchical clustering, overlapping clustering, K-Means Clustering

UNIT IV

9 Hours

PYTHON CONCEPT AND DATA WRANGLING

Python Concepts- Data Structures- Classes- Interpreter, Program Execution, Statements, Expressions, Flow Controls, Functions, Numeric Types, Sequences and Class Constructors, Text & Binary Files - Reading and Writing. Data Wrangling- Combining and Merging Datasets, Reshaping and Pivoting, Data Transformation, String Manipulation, Regular Expressions

UNIT V

9 Hours

DATA AGGREGATION AND VISUALIZATION IN PYTHON

Data Aggregation, Group Operations, Time series- Groupby Mechanics, Data Aggregation, Group wise Operations and Transformations, Pivot Tables and Cross Tabulations, Time Series Basics, Data Ranges, Frequencies and Shifting. Visualization in Python- Matplotlib package, Plotting Graphs, Controlling Graph, Adding Text, More Graph Types, Getting and setting values, Patches

1

4 Hours

EXPERIMENT 1

Basic Python Programs

2

4 Hours

EXPERIMENT 2

Program using String Operations

3		4 Hours
EXPERIMENT 3	Program on python Data structures	
4		4 Hours
EXPERIMENT 4	Perform various numpy operations and special functions	
5		4 Hours
EXPERIMENT 5	Draw statistical graphics using seaborn	
6		5 Hours
EXPERIMENT 6	Implement k-means, logistic and time series algorithm using Scikit-learn	
7		5 Hours
EXPERIMENT 7	Visualization in python using matplotlib	

Total: 45+30 =75 Hours

DATABASE MANAGEMENT SYSTEMS

3 0 2 4

Course Objectives

- Understand the database architecture, data models, conceptualize and design database.
- Process the SQL queries and optimize it.
- Impart knowledge in transaction processing and database security.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Understand the architecture of database and the models for designing database.
2. Develop solutions to a broad range of query and remove the anomalies using normalization.
3. Understand database query processing and storage strategies.
4. Analyze the basic issues of transaction processing, concurrency control and recovery.
5. Outline the concept of database security.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	2	3	3		3									3
3	2	3	2		3									2
4	2	2	2											
5	2	2	2											2

UNIT I

9 Hours

DATABASE ARCHITECTURE AND DATA MODEL

Introduction to Database - Hierarchical, Network and Relational Models. Database system architecture: Data Abstraction, Data Independence, Data Definition Language (DDL), Data Manipulation Language (DML) Data models: Entity-relationship model, network model, relational and object-oriented data models, integrity constraints, data manipulation operations.

UNIT II

12 Hours

RELATIONAL QUERY AND DATABASE DESIGN

Relational query languages: Relational algebra, Tuple and domain relational calculus, SQL3, DDL and DML constructs, Open source and Commercial DBMS - MYSQL, SQL server. Relational database design: Domain and data dependency, Armstrong's axioms, Functional Dependencies, Normal forms, Dependency preservation, Lossless design.

UNIT III

8 Hours

QUERY PROCESSING AND STORAGE

Query processing and optimization: Evaluation of relational algebra expressions, Query equivalence, Join strategies, Query optimization algorithms. Storage strategies: Indices, B-trees, Hashing.

UNIT IV

8 Hours

TRANSACTION PROCESSING

Concurrency control, ACID property, Serializability of scheduling, Locking and timestamp-based schedulers, Multi-version and optimistic Concurrency Control schemes, Database recovery.

UNIT V

8 Hours

DATABASE SECURITY

Authentication, Authorization and access control, DAC, MAC and RBAC models, Intrusion detection, SQL injection.

FURTHER READING

Object oriented and object relational databases, Logical databases, Web databases, Distributed databases, Data warehousing and data mining

1 **5 Hours**

EXPERIMENT 1

Working with SQL commands like DDL, DML, TCL, and DCL.

2 **5 Hours**

EXPERIMENT 2

Execute simple queries using joins and Integrity constraints.

3 **5 Hours**

EXPERIMENT 3

Create database relation and check for normal forms

4 **5 Hours**

EXPERIMENT 4

Implement Cursor and trigger in PL/SQL block.

5 **5 Hours**

EXPERIMENT 5

Write PL/SQL block Programs using exception handling

6 **5 Hours**

EXPERIMENT 6

Design a PL/SQL blocks using subprograms namely functions and procedures

Total: 45+30 =75 Hours

FUNDAMENTALS OF MANAGEMENT

2 0 0 2

Course Objectives

- To understand the basics of management and its theories.
- To analyse the individual behaviour in organizational setting to motivate the multicultural workforce
- To acquaint with the concepts of ethics, governance and social responsibilities in the business

Programme Outcomes (POs)

h. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

- i. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- k. Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.
- n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Able to understand the evolutions of management and apply the concept of management principles in the decision-making process.
2. Effectively manage the business by understanding the functions of management and to identify the factors influencing employee's behaviour in the organizations
3. Able to design the effective organizational structure to achieve the objectives of the organization
4. Assess the impact of organizational decisions and activities on the society
5. Able to understand and develop the leadership qualities to influence and lead the organization across the globe

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1								1	1		2		2	
2								2	3		1		3	
3								1	1		1		1	1
4								3	2		1		1	
5								2	3		1		2	

UNIT I

6 Hours

MANAGEMENT THEORIES

Concept and Foundations of Management, Evolution of Management Thoughts [Pre-Scientific Management Era (before 1880), Classical management Era (1880-1930), Neo-classical Management Era (1930-1950), Modern Management era (1950-onward). Contribution of Management Thinkers: Taylor, Fayol, Elton Mayo etc.

UNIT II

6 Hours

FUNCTIONS OF MANAGEMENT

Planning, Organizing, Staffing, Directing, Controlling, Leadership - Concept, Nature, Importance, Attributes of a leader, developing leaders across the organization, Leadership Grid.

UNIT III

6 Hours

ORGANIZATIONAL DESIGN

Classical, Neoclassical and Contingency approaches to organizational design; Organizational theory and design, Organizational structure (Simple Structure, Functional Structure, Divisional Structure, Matrix Structure).

UNIT IV **6 Hours**

ORGANIZATION BEHAVIOR

Introduction, Personality, Perception, Learning and Reinforcement, Motivation, Group Dynamics, Power & Influence, Work Stress and Stress Management, Decision Making, Problems in Decision Making, Decision Making, Organizational Culture, Managing Cultural Diversity

UNIT V **6 Hours**

MANAGERIAL ETHICS

Ethics and business, Ethics of Marketing and advertising, Ethics of Finance and accounting, Decision making frameworks, business and social responsibility, International standards, Corporate Governance, Corporate Citizenship , Corporate social responsibility

Total: 30 Hours

Reference(s)

1. Richard L. Daft, Understanding the Theory and Design of Organization, Eleventh Edition, Cengage Learning India Private Limited, 2020
2. Stephen P. Robbins, Timothy A. Judge, Neharika Vohra, Organizational Behaviour, Eighteenth Edition, Pearson India, 2019.

22HS004

HUMAN VALUES AND ETHICS

2 0 0 2

Course Objectives

- Understand the concept of good values and comprehend the importance of value-based living.
- Recognize the culture of peace through education.
- Identify and apply the practices for value development and clarification.

Course Outcomes (COs)

1. Understand the importance of human values and ethics in life.
2. Execute the importance of harmonious living in a diverse society.
3. Analyze the sensitivity to the crying needs of society such as ungodliness, corruption, poverty, and suffering, and play a vital role in eradicating them.
4. Plan intellectually mature, morally upright, ethically correct, and spiritually inspired decisions.
5. Execute a correct balance between professional excellence and social commitment.

UNIT I **6 Hours**

COURSE INTRODUCTION - NEED, BASIC GUIDELINES AND ANALYSIS

- 1.Importance of Human Values & Ethics in 21st Century.
- 2.Understanding the theory of basic human values and ethics Openness to change- Self-enhancement- Conservation- Self-transcendence.
3. Schwartz Value Survey: Self-Assessment

UNIT II **6 Hours**

EMBRACING THE COMMON ETIQUETTE

Altruism- Integrity-Freedom-Justice-Honesty-Truthfulness-Responsibility-Compassion

UNIT III **6 Hours**

CONTINUOUS HAPPINESS AND PROSPERITY

An overview on basic Human Aspirations- Understanding and living in harmony at various levels of life-Embracing self-love and wellness-Understanding harmony in the family and society

UNIT IV **6 Hours**

UNIVERSAL HUMAN VALUES AND PROFESSIONAL ETHICS

Reflection on growing global multifold problems: poverty, pollution, hunger, disease, unemployment, caste system, child labour, gender equality, politics and violence. Understanding the challenges in cultural, personal, social, political, and economic environment

UNIT V **6 Hours**

UNDERSTANDING HARMONY IN THE NATURE AND EXISTENCE - WHOLE EXISTENCE AS CO-EXISTENCE

Understanding the harmony in the Nature- Holistic perception of harmony at all levels of existence- Practice Exercises and Case Studies.

Total: 30 Hours

22HS005

**SOFT SKILLS AND EFFECTIVE
COMMUNICATION**

0 0 2 1

Course Objectives

1. Communicate proficiently in formal discussions at the workplace.
2. Describe experiences and events, and briefly give reasons and explanations for opinions and plans.
3. Interact with a degree of fluency and spontaneity that results in efficacious communication
4. Convey agreement and disagreement in a polite but firm manner
5. Communicate with coherence and imagination in both written and spoken formats

Course Outcomes (COs)

1. Enhance confidence in expressing thoughts in grammatically proper language and etiquette in waiting for the opportunity to provide input.
2. Effectively communicate in English on formal occasions and proficiency in the use of link words and other discourse markers
3. Provide constructive feedback and file logical complaints.

4. Analyse the understanding of oral and written communication in real-world situations.
5. Apply the improved spelling and punctuation in writing and heightened understanding of tone, pitch and stress in oral formats.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1									2	3				
2									2	3				
3									2	3				
4									2	3				
5									2	3				

UNIT I

10 Hours

SELF-EXPRESSION

Group discussion/ Peer discussion - Communicating decisions and opinions - Tone, Pitch, Stress - Agreeing, Disagreeing, Suggesting, Speculating - Comparing and Contrasting - Comparatives and Superlatives - Discourse markers – Interjections - Decision making - Synthesis - Higher order thinking Group discussion/Peer discussion - Effective Communication Types of communication - Written vs Spoken - Contractions Intonation Stress Active voice - Question tags - Confidence and body language Guided writing- Outlining Main Points - Group discussion/Peer discussion - Avoiding common errors Reduction of MTI - Common errors - Barriers to communication Accent

UNIT II

10 Hours

CREATIVE EXPRESSION

JAM, Debate, Review writing, social media posts Synonyms - Antonyms Cloze test Phrasal verbs Spotting errors Collocation - Commonly mispronounced.

UNIT III

10 Hours

FORMAL EXPRESSION

Writing: Giving written feedback, Review writing, and Letter of complaint. Speaking: Giving constructive feedback and offering suggestions, asking for inputs, commenting politely on appropriate phrases - Giving written feedback, Review writing, and Letter of complaint. Critical reasoning - Modal verbs - Polite ways to express negatives.

Total: 30 Hours

5. Personality Development & Soft Skills, BarunK. Mitra, Oxford University Press, 2012
6. Business English by Ken Taylor, Orient Blackswan, 2011.

Course Objectives

1. Analyse graffiti on potteries as a form of historical and cultural documentation during the Sangam Age.
2. Investigate the building materials and the historical context of Hero stones during the Sangam Age by Analysing the details of stage constructions in Silappathikaram and their cultural significance.
3. Examine ancient knowledge of oceans and its impact on Tamil society.

Course Outcomes (COs)

1. Understand the significance of the weaving industry during the Sangam Age and its cultural importance.
2. Understand the significance of dams, tanks, ponds, and sluices in the agricultural and irrigation practices of the Chola Period.
3. Explore the architectural designs and structural construction methods used in household materials during the Sangam Age.
4. Explore the art of shipbuilding in ancient Tamil culture and its role in maritime trade and transportation.
5. Trace the development of scientific terminology and vocabulary in Tamil language.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1									2	3				
2									2	3				
3									2	3				
4									2	3				
5									2	3				

UNIT I**3 Hours****WEAVING AND CERAMIC TECHNOLOGY**

Weaving Industry during Sangam Age – Ceramic technology – Black and Red Ware Potteries (BRW) – Graffiti on Potteries.

UNIT II**3 Hours****DESIGN AND CONSTRUCTION TECHNOLOGY**

Designing and Structural construction House & Designs in household materials during Sangam Age - Building materials and Hero stones of Sangam age – Details of Stage Constructions in Silappathikaram - Sculptures and Temples of Mamallapuram - Great Temples of Cholas and other worship places - Temples of Nayaka Period - Type study (Madurai Meenakshi Temple)- Thirumalai Nayakar Mahal - Chetti Nadu Houses, Indo - Saracenic architecture at Madras during British Period.

UNIT III**3 Hours****MANUFACTURING TECHNOLOGY**

Art of Ship Building - Metallurgical studies - Iron industry - Iron smelting, steel - Copper and gold - Coins as source of history - Minting of Coins – Beads making-industries Stone beads -Glass beads - Terracotta beads -Shell beads/ bone beads - Archeological evidences - Gem stone types described in Silappathikaram.

UNIT IV**3 Hours****AGRICULTURE AND IRRIGATION TECHNOLOGY**

Dam, Tank, ponds, Sluice, Significance of Kumizhi Thoompu of Chola Period, Animal Husbandry - Wells designed for cattle use - Agriculture and Agro Processing - Knowledge of Sea - Fisheries – Pearl - Conche diving - Ancient Knowledge of Ocean - Knowledge Specific Society.

UNIT V**3 Hours****SCIENTIFIC TAMIL & TAMIL COMPUTING**

Development of Scientific Tamil - Tamil computing – Digitalization of Tamil Books – Development of Tamil Software – Tamil Virtual Academy – Tamil Digital Library – Online Tamil Dictionaries – Sorkuvai Project.

Total: 15 Hours**Reference(s)**

8. R.Balakrishnan , Journey of Civilization Indus to Vaigai, RMRL

22HS006**தமிழரும் தொழில்நுட்பமும்****1 0 0 1****பாடத்திட்டத்தின் நோக்கம்**

1. சங்க காலத்தில் வரலாறு மற்றும் கலாச்சார ஆவணங்களின் ஒரு வடிவமாக, மட்பாண்டங்கள் மீதான கிராஃபிட்டியை பகுப்பாய்வு செய்தல்.
2. சிலப்பதிகாரத்தில் கட்டப்பட்ட மேடை கட்டுமானங்களின் விவரங்களையும் அவற்றின் கலாச்சார முக்கியத்துவத்தையும்

பகுப்பாய்வு செய்வதன் மூலம், சங்க காலத்தில் மாவீரர் கற்களின் கட்டுமானப் பொருட்கள் மற்றும் வரலாற்று சூழலை ஆராய்தல்.

3. சமுத்திரங்கள் பற்றிய பண்டைய அறிவையும், தமிழ் சமூகத்தில் அதன் தாக்கத்தையும் ஆராய்வது ஆகியவை இப்பாடத்திட்டத்தின் நோக்கம் ஆகும்.

கற்றலின் விளைவு

1. சங்க காலத்தில் நெசவுத் தொழிலின் முக்கியத்துவத்தையும் அதன் கலாச்சார முக்கியத்துவத்தையும் புரிந்து கொள்ளல்.
2. சோழர் கால விவசாய மற்றும் நீர்ப்பாசன நடைமுறைகளில் அணைகள், குளங்கள் மற்றும் மதகுகளின் முக்கியத்துவத்தைப் புரிந்து கொள்ளல்.
3. சங்க காலத்தில் வீட்டுப் பொருட்களில் பயன்படுத்தப்பட்ட கட்டடக்கலை வடிவமைப்புகள் மற்றும் கட்டமைப்பு கட்டுமான முறைகளை ஆராய்தல்.
4. பண்டைய தமிழ் கலாச்சாரத்தில், கப்பல் கட்டும் கலை, கடல் வர்த்தகம் மற்றும் போக்குவரத்தில் அதன் பங்கை ஆராய்தல்.
5. தமிழ் மொழியில் அறிவியல் சொற்களஞ்சியம் மற்றும் சொல்லகராதியின் வளர்ச்சியைக் கண்டறிதல்.

அலகு I நெசவு மற்றும் பானைத் தொழில்நுட்பம்:

3

சங்க காலத்தில் நெசவுத் தொழில் - பானைத் தொழில்நுட்பம் - கருப்பு சிவப்பு பாண்டங்கள் - பாண்டங்களில் கீறல் குறியீடுகள்.

அலகு II வடிவமைப்பு மற்றும் கட்டிடத் தொழில்நுட்பம்:

3

சங்க காலத்தில் வடிவமைப்பு மற்றும் கட்டுமானங்கள் & சங்க காலத்தில் வீட்டுப் பொருட்களில் வடிவமைப்பு- சங்க காலத்தில் கட்டுமான பொருட்களும் நடுகல்லும் - சிலப்பதிகாரத்தில் மேடை அமைப்பு பற்றிய விவரங்கள் - மாமல்லபுரம் சிற்பங்களும், கோவில்களும் - சோழர் காலத்துப் பெருங்கோயில்கள் மற்றும் பிற வழிபாட்டுத் தலங்கள் - நாயக்கர் காலக் கோயில்கள் - மாதிரி கட்டமைப்புகள் பற்றி அறிதல், மதுரை மீனாட்சி அம்மன் ஆலயம் மற்றும் திருமலை நாயக்கர் மஹால் - செட்டிநாட்டு வீடுகள் - பிரிட்டிஷ் காலத்தில் சென்னையில் இந்தோ-சாரோசெனிக் கட்டிடக் கலை.

அலகு III உற்பத்தித் தொழில் நுட்பம்: 3

கப்பல் கட்டும் கலை - உலோகவியல் - இரும்புத் தொழிற்சாலை - இரும்பை உருக்குதல், எஃகு - வரலாற்றுச் சான்றுகளாக செம்பு மற்றும் தங்க நாணயங்கள் - நாணயங்கள் அச்சடித்தல் - மணி உருவாக்கும் தொழிற்சாலைகள் - கல்மணிகள், கண்ணாடி மணிகள் - சுடுமண் மணிகள் - சங்கு மணிகள் - எலும்புத்துண்டுகள் - தொல்லியல் சான்றுகள் - சிலப்பதிகாரத்தில் மணிகளின் வகைகள்.

அலகு IV வேளாண்மை மற்றும் நீர்ப்பாசனத் தொழில் நுட்பம்: 3

அணை, ஏரி, குளங்கள், மதகு - சோழர்காலக் குழுவித் தூம்பின் முக்கியத்துவம் - கால்நடை பராமரிப்பு - கால்நடைகளுக்காக வடிவமைக்கப்பட்ட கிணறுகள் - வேளாண்மை மற்றும் வேளாண்மைச் சார்ந்த செயல்பாடுகள் - கடல்சார் அறிவு - மீன்வளம் - முத்து மற்றும் முத்துக்குளித்தல் - பெருங்கடல் குறித்த பண்டைய அறிவு - அறிவுசார் சமூகம்.

அலகு V அறிவியல் தமிழ் மற்றும் கணித்தமிழ்: 3

அறிவியல் தமிழின் வளர்ச்சி - கணித்தமிழ் வளர்ச்சி - தமிழ் நூல்களை மின்பதிப்பு செய்தல் - தமிழ் மென்பொருட்கள் உருவாக்கம் - தமிழ் இணையக் கல்விக்கழகம் - தமிழ் மின் நூலகம் - இணையத்தில் தமிழ் அகராதிகள் - சொற்குவைத் திட்டம்.

TOTAL : 15 PERIODS

1. தமிழக வரலாறு - மக்களும் பண்பாடும் - கே.கே. பிள்ளை (வெளியீடு: தமிழ்நாடு பாடநூல் மற்றும் கல்வியியல் பணிகள் கழகம்).
2. கணிணித் தமிழ் - முனைவர் இல. சுந்தரம். (விகடன் பிரசுரம்).
3. கீழடி - வைகை நதிக்கரையில் சங்ககால நகர நாகரிகம் (தொல்லியல் துறை வெளியீடு)
4. பொருளை - ஆற்றங்கரை நாகரிகம். (தொல்லியல் துறை வெளியீடு)
5. Social Life of Tamils (Dr.K.K.Pillay) A joint publication of TNTB & ESC and RMRL - (in print)
6. Social Life of the Tamils - The Classical Period (Dr.S.Singaravelu) (Published by: International Institute of Tamil Studies).
7. Historical Heritage of the Tamils (Dr.S.V.Subatamanian, Dr.K.D. Thirunavukkarasu) (Published by: International Institute of Tamil Studies).
8. The Contributions of the Tamils to Indian Culture (Dr.M.Valarmathi) (Published by: International Institute of Tamil Studies.)
9. Keeladi - 'Sangam City Civilization on the banks of river Vaigai' (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu)
10. Studies in the History of India with Special Reference to Tamil Nadu (Dr.K.K.Pillay) (Published by: The Author)
11. Porunai Civilization (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu)
12. Journey of Civilization Indus to Vaigai (R.Balakrishnan) (Published by: RMRL) - Reference Book.

Course Objectives

- To make the students learn different types of operating systems along with the components and services provided
- To understand the concept of process management and implementation of process scheduling in a multiprogramming environment using threads and scheduling algorithms
- To provide knowledge on the structure and operations of memory management and storage management

Programme Outcomes (POs)

a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

Course Outcomes (COs)

1. Infer the knowledge on evolution of operating systems from primitive batch systems to sophisticated multi-user systems and implement the usage of different system calls to manage the resources.
2. Analyze the mechanism of threads with the process of scheduling algorithms used in a multiprogramming environment.
3. Outline the mechanism of inter process communication using shared memory, message passing and analyze the activities of process synchronization, deadlock to increase the system performance.
4. Design the hardware component to implement the virtual memory environment with the base knowledge of memory management methodologies.
5. Prefer a most suitable file system and the ordered perspective module of disk management methods for computing and storage scenario.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	1		2		1									
3	1		3		1									
4	1		3		1									
5	1		2		2									

UNIT I**6 Hours****INTRODUCTION**

Concept of Operating Systems (OS), Generations of OS, Types of OS, OS Services, Interrupt handling and System Calls, Basic architectural concepts of an OS, Concept of Virtual Machine, Resource Manager view, process view and hierarchical view of an OS.

UNIT II **11 Hours**

PROCESS MANAGEMENT SYSTEM

Definition, Process Relationship, Different states of a Process, Process State transitions, Process Control Block (PCB), Context switching, Threads: Definition, Various states, Benefits of threads, Types of threads, Concept of multi-threads, Process Scheduling: Foundation and Scheduling objectives, Types of Schedulers, Scheduling criteria: CPU utilization, Throughput, Turnaround Time, Waiting Time, Response Time, Scheduling algorithms: Pre-emptive and non-pre-emptive, FCFS, SJF, RR; Multiprocessor scheduling: Real Time scheduling: RM and EDF.

UNIT III **9 Hours**

IPC AND DEADLOCKS

Concurrent processes, precedence graphs, Critical Section, Race Conditions, Mutual Exclusion, Hardware Solution, Semaphores, Strict Alternation, Peterson's Solution, The Producer / Consumer Problem, Event Counters, Monitors, Message Passing, Classical IPC Problems: Reader's & Writer Problem, Dining Philosopher Problem, Barber's shop problem, Deadlocks: Definition, Necessary and sufficient conditions for Deadlock, Deadlock Prevention, Deadlock Avoidance: Banker's algorithm, Deadlock detection and Recovery, Concurrent Programming: Critical region, conditional critical region, monitors, concurrent languages, communicating sequential process (CSP); Deadlocks - prevention, avoidance, detection and recovery.

UNIT IV **10 Hours**

MEMORY MANAGEMENT SYSTEM

Memory Management: Basic concept, Logical and Physical address maps, Memory allocation: Contiguous Memory allocation - Fixed and variable partition - Internal and External fragmentation and Compaction, Virtual Memory: Basics of Virtual Memory - Hardware and control structures - Locality of reference, Page allocation, Partitioning, Paging, Page fault, Working Set, Segmentation, Demand paging, Page Replacement algorithms: Optimal, First in First Out (FIFO), Second Chance (SC), Not recently used (NRU) and Least Recently used (LRU), I/O Hardware: I/O devices, Device controllers, Direct Memory Access, Principles of I/O.

UNIT V **9 Hours**

FILE AND DISK MANAGEMENT SYSTEM

File Management: Concept of File, Access methods, File types, File operation, Directory structure, File System structure, Allocation methods (contiguous, linked, indexed), Free - space management (bit vector, linked list, grouping), directory implementation (linear list, hash table), efficiency and performance, Disk Management: Disk structure, Disk scheduling - FCFS, SSTF, SCAN, C - SCAN, Disk reliability, Disk formatting, Boot - block, Bad blocks.

1 **3 Hours**

EXPERIMENT 1

Study of Linux commands - System Information, Files and Directories, Process, Text Processing and Scripting, Programming.

2 **3 Hours**

EXPERIMENT 2

Shell scripting (I/O, decision making, looping)

3 **3 Hours**

EXPERIMENT 3

Creating child process (using fork), zombie Orphan. Displaying system information using C.

4 EXPERIMENT 4 CPU Scheduling algorithms (FCFS, SJF, RR, Priority).	3 Hours
5 EXPERIMENT 5 Process synchronization (Producer Consumer/ Reader Writer/ Dining Philosopher using semaphores)	3 Hours
6 EXPERIMENT 6 Deadlock Avoidance Algorithm(Bankers Algorithm).	3 Hours
7 EXPERIMENT 7 Inter Process Communication system using (Threads, Shared Memory)	3 Hours
8 EXPERIMENT 8 Dynamic Memory Allocation algorithms (First Fit, Best Fit, Worst Fit)	3 Hours
9 EXPERIMENT 9 Page Replacement Algorithms. (FIFO, LRU, Optimal)	3 Hours
10 EXPERIMENT 10 Disk Scheduling Algorithms	3 Hours

Total: 45+30 = 75 Hours

3. Operating System: A Design-oriented Approach.Charles Patrick Crowley.
4. Operating Systems: A Modern Perspective. Gary J. Nutt.
5. Design of the Unix Operating Systems. Maurice J. Bach.

Course Objectives

- 1. Understand the need for different software development life cycle models
- 2. Impart knowledge on software requirement analysis, estimation, design and testing
- 3. Acquire knowledge on object oriented analysis, design and measurements

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- j. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- k. Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Course Outcomes (COs)

1. Analyse and identify a suitable software development life cycle model for an application
2. Develop software requirements specification and cost estimation for an application.
3. Design high quality software for an application based on quality models.
4. Apply different testing methods to identify errors during software development.
5. Apply object oriented methodologies and unified modelling language in software development.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	1	2	3								2			
3		2	3							1				
4		2	2							1	2			
5		2	2											

UNIT I**6 Hours****INTRODUCTION**

Programming in the small vs. programming in the large-Software project failures and importance of software quality and timely availability-Engineering approach to software development-Role of software engineering towards successful execution of large software projects-Emergence of software engineering as a discipline-Basic concepts of life cycle models-different models and milestones.

UNIT II **11 Hours**

SOFTWARE PROJECT MANAGEMENT AND ESTIMATION TECHNIQUES

Project management: Software project planning identification of activities and resources-Concepts of feasibility study-Techniques for estimation of schedule and effort-Introduction to Software Requirements Specifications (SRS) and requirement elicitation techniques-Techniques for requirement modeling decision tables, event tables, state transition tables, Petri nets-Requirements documentation through use cases.Estimation techniques: Software cost estimation models and concepts of software engineering economics-Techniques of software project control and reporting-Introduction to measurement of software size- Introduction to software metrics and metrics based control methods.

UNIT III **9 Hours**

SOFTWARE QUALITY AND RELIABILITY

Introduction to the concepts of risk and its mitigation -Internal and external qualities-Process and product quality-Principles to achieve software quality-Introduction to different software quality models like McCall, Boehm, FURPS / FURPS+, Dromey, ISO 9126-Introduction to Capability Maturity Models (CMM and CMMI)-Introduction to software reliability, reliability models and estimation-Measures of code and design quality-Configuration management

UNIT IV **10 Hours**

SOFTWARE TESTING

Introduction to faults and failures-Basic testing concepts-Concepts of verification and validation-Black box and white box tests-White box test coverage code coverage, condition coverage, branch coverage-Basic concepts of black-box tests equivalence classes, boundary value tests, usage of state tables-Testing use cases-Transaction based testing-Testing for non-functional requirements volume, performance and efficiency-Concepts of inspection.

UNIT V **9 Hours**

OBJECT ORIENTED ANALYSIS, DESIGN AND CONSTRUCTION

Concepts the principles of abstraction, modularity, specification, encapsulation and information hiding-concepts of abstract data type- Introduction to UML-Class Responsibility Collaborator (CRC) model-Quality of design-Design measurements-Concepts of design patterns-Refactoring-Object oriented construction principles-Object oriented metrics.

1 **4 Hours**

EXPERIMENT 1

Course Registration System

2 **4 Hours**

EXPERIMENT 2

Online ticket reservation system

3 **4 Hours**

EXPERIMENT 3

Student Performance analysis system

4 **4 Hours**

EXPERIMENT 4

Expert system to prescribe the medicines for the given symptoms

5 **4 Hours**

EXPERIMENT 5

ATM system for company

6 **5 Hours**

EXPERIMENT 6

Platform assignment system for the trains in a railway station

7 **5 Hours**

EXPERIMENT 7

Stock maintenance for office

Total: 45+30 = 75 Hours

DESIGN AND ANALYSIS OF ALGORITHMS

3 0 2 4

Course Objectives

- Understand the basic concepts of various algorithm design techniques
- Impart knowledge on runtime analysis of algorithms
- Empathize the limits of computation

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

Course Outcomes (COs)

1. Analyse the algorithm efficiency by means of mathematical notations specialization to the solution of complex engineering problems.
2. Classify the fundamentals of Algorithmic problem solving methods
3. Analyse the different techniques in the design of Graph Algorithms
4. Criticize the various algorithms design techniques of NP complete with NP hard problems
5. Examine the different approaches of advanced problem solving methods

Articulation Matrix

4	2	3	3		3								2	
5	1	2	3										2	

UNIT I

9 Hours

INTRODUCTION

Characteristics of Algorithm, Analysis of Algorithm, Asymptotic analysis of Complexity Bounds-Best, Average and Worst-Case behavior, Performance Measurements of Algorithm, Time and Space Trade-Offs, Analysis of Recursive Algorithms through Recurrence Relations, Substitution Method, Recursion Tree Method, and Masters Theorem

UNIT II

9 Hours

FUNDAMENTAL ALGORITHMIC STRATEGIES - I

Brute-Force, Divide and conquer, Heuristics, Greedy Methodologies, Illustrations of these techniques for Problem Solving.

UNIT III

9 Hours

FUNDAMENTAL ALGORITHMIC STRATEGIES - II

Dynamic Programming, Branch and Bound and Backtracking Methodologies, Illustrations of these techniques for Problem Solving, Bin Packing, Knapsack, Travelling Salesman Problem.

UNIT IV

9 Hours

GRAPH AND TREE ALGORITHMS

Traversal algorithms: Depth First Search (DFS) and Breadth First Search (BFS)- Shortest path algorithms, Transitive closure, Heap Sort, Topological sorting, Network Flow Algorithm.

UNIT V

9 Hours

TRACTABLE AND INTRACTABLE PROBLEMS AND ADVANCED TOPICS

Computability of Algorithms, Computability classes,P, NP, NP Complete and NP Hard- Standard NP complete Problems and Reduction Techniques- Approximation algorithms, Randomized algorithms

1

6 Hours

EXPERIMENT 1

Sort a given set of n integer elements using Quick Sort method and compute its time complexity. Run the program for varied values of $n > 5000$ and record the time taken to sort. Plot a graph of the time

taken versus non graph sheet. The elements can be read from a file or can be generated using the random number generator. Demonstrate how the divide-and-conquer method works along with its time complexity analysis: worst case, average case and best case.

2

6 Hours

EXPERIMENT 2

Sort a given set of n integer elements using Merge Sort method and compute its time complexity. Run the program for varied values of $n > 5000$, and record the time taken to sort. Plot a graph of the time taken versus non graph sheet. The elements can be read from a file or can be generated using the random number generator. Demonstrate how the divide-and-conquer method works along with its time complexity analysis: worst case, average case and best case.

3

6 Hours

EXPERIMENT 3

Implement the 0/1 Knapsack problem using Greedy method.

4

6 Hours

EXPERIMENT 4

For any given vertex in a weighted connected graph, find shortest paths to other vertices using Dijkstra's algorithm.

5

6 Hours

EXPERIMENT 5

Design and implement an algorithm to find a subset of a given set $S = \{S_1, S_2, \dots, S_n\}$ of n positive integers whose SUM is equal to a given positive integer d. For example, if $S = \{1, 2, 5, 6, 8\}$ and $d = 9$, there are two solutions $\{1, 2, 6\}$ and $\{1, 8\}$. Display a suitable message, if the given problem instance doesn't have a solution.

Course Objectives

- Understand and compare the important of design thinking
- Identify the steps in the design thinking (DT) process

Programme Outcomes (POs)

a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

f. The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

k. Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

l. Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Interpret the importance of design thinking and steps in the DT process
2. Analyse empathize phase of design thinking
3. Compare the different perspectives on personas in the define phase
4. Analyse the ideate phase of design thinking
5. Recognize the importance of the prototype and testing phase in DT

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

4	2		3			1					2	1		
5	2		1			1					2	1		2

UNIT I**9 Hours****INTRODUCTION**

Introduction-Importance of Design Thinking (DT) -Design Thinking for business-Design Thinking for an Individual-Steps in the DT process- Empathize-Define-Ideate-Prototype-Test.

UNIT II**9 Hours****EMPATHY PHASE**

Empathy Phase:-Steps in the empathize phase of DT- Empathy- What, How, Why-Different types to developing Empathy towards People-Steps required to conduct an immersion activity-How to

empathize- Introduction to Immersion Activity-Conducting an immersion activity-DT question template for Immersion activity

UNIT III

9 Hours

DEFINE PHASE

Creating personas- Steps to create personas in the define phase of DT- Creating your own Persona- Four Different Perspectives on Personas-Goal-directed Personas, Role-Based Personas, Engaging Personas, Fictional Personas-Steps to create your Engaging Personas and Scenarios -Steps to create problem statements in the define phase of DT -Problem statements-Defining problem statements- Problem statements in define phase of DT

UNIT IV

9 Hours

IDEATE PHASE

How to Ideate-Steps in the ideate phase of DT-Appling the steps in the ideate phase of DT-Ideation games- Six Thinking Hats and Million-dollar idea -Ideate to find solution-Characteristics Required for Successful Ideation-Doodling for expressing ideas-Importance of storytelling in presenting ideas and prototypes-Storytelling in DT

UNIT V

9 Hours

PROTOTYPE AND TESTING PHASE

Importance of the prototype phase in DT-Prototype your idea-Create a prototype-Types of Prototyping-Low-Fidelity Prototyping and High-Fidelity Prototyping-Guidelines for Prototyping-Service value proposition-Creating a value proposition statement-Testing in Design Thinking-Test the Prototype - Role of DT in your work -DT for better coding -Agile and DT complement each other to deliver customer Satisfaction-Satori

Course Objectives

- Learn the fundamental concepts of operations research, solving technique, analyze the results and propose recommendations in understandable to the decision - making processes in Management and Engineering.
- Understand and apply the methodologies of the Queueing theory and simulation.

Programme Outcomes (POs)

a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

1. Understand the basic concepts of operational research techniques from the verbal description of the real system.
2. Understand the mathematical tools that are needed to solve optimization problems for transshipment problems.
3. Understand the concepts of network use PERT and CPM techniques to plan, schedule and control project activities.
4. Identify and apply the queuing methodologies to optimize the result of the waiting line.
5. Understand the fundamental concepts related to random number generation in simulation techniques.

5	2	3												

UNIT I**6 Hours****LINEAR PROGRAMMING**

Linear programming - Examples from industrial cases, formulation & definitions, Matrix form. Basic concepts, Special cases - infeasibility, unboundedness, redundancy and degeneracy, Sensitivity analysis. Simplex Algorithm - slack, surplus & artificial variables, computational details, big - M method, identification and resolution of special cases through simplex iterations. Duality - formulation, results, fundamental theorem of duality, dual - simplex and primal - dual algorithms.

UNIT II**6 Hours****TRANSPORTATION AND ASSIGNMENT PROBLEMS**

TP - Examples, Definitions - decision variables, supply & demand constraints, formulation, Balanced & unbalanced situations, Solution methods - NWCR, minimum cost and VAM, test for optimality (MODI method), degeneracy and its resolution. AP - Examples, Definitions - decision variables,

constraints, formulation, Balanced & unbalanced situations, Solution method - Hungarian, test for optimality (MODI method), degeneracy & its resolution.

UNIT III **6 Hours**

PERT - CPM AND INVENTORY CONTROL

Project definition, Project scheduling techniques - Gantt chart, PERT & CPM, Determination of critical paths, Estimation of Project time and its variance in PERT using statistical principles, Concept of project crashing/time - cost trade - off. Inventory Control: Functions of inventory and its disadvantages, ABC analysis, Concept of inventory costs, Basics of inventory policy (order, lead time, types), Fixed order-quantity models - EOQ, POQ & Quantity discount models. EOQ models for discrete units, sensitivity analysis and Robustness.

UNIT IV **6 Hours**

QUEUING THEORY

Definitions - queue (waiting line), waiting costs, characteristics (arrival, queue, service discipline) of queuing system, queue types (channel vs. phase). Kendall's notation, Little's law, steady state behavior, Poisson's Process & queue, Models with examples - M/M/1 and its performance measures; M/M/m and its performance measures.

UNIT V **6 Hours**

SIMULATION METHODOLOGY

Definition and steps of simulation, random number, random number generator, Discrete Event System Simulation - clock, event list, Application in Scheduling, Queuing systems and Inventory systems.

1 **3 Hours**

EXPERIMENT 1

Mathematical model and Formulation of Linear programming

2 **3 Hours**

EXPERIMENT 2

Graphical method of Linear programming

3 **3 Hours**

EXPERIMENT 3

Simplex method of linear programming

4 **3 Hours**

EXPERIMENT 4

Penalty method to assess the Linear programming

5 **3 Hours**

EXPERIMENT 5

Duality method of Linear programming

6 **3 Hours**

EXPERIMENT 6

North West corner method of Transportation

22CB406 MARKETING RESEARCH AND MARKETING MANAGEMENT 2 0 0 2

Course Objectives

- To gain insight on fundamental concepts of marketing
- Comprehend the dynamics of marketing and analyse how its various components interact with each other in the real world
- Impart knowledge about the principles of marketing research

Programme Outcomes (POs)

- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- f. The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

g. Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. To explain the functioning of elasticity of demand in micro economics.
2. Comprehend the dynamics of marketing and analyse how its various components interact with each other in the real world
3. Leverage marketing concepts for effective decision making
4. Understand the basic concepts , principles, statistical tools of marketing research
5. Execute various strategies of Internet Marketing

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2			2	2										2
3			2	2										2
4				3			2							2
5			2				2							2

UNIT I

7 Hours

MARKETING CONCEPTS AND APPLICATIONS

Marketing Concepts and Applications: Introduction to Marketing & Core Concepts, Marketing of Services, Importance of marketing in service sector-Marketing Planning & Environment: Elements of Marketing Mix, Analysing needs & trends in Environment - Macro, Economic, Political, Technical & Social- Understanding the consumer: Determinants of consumer behaviour, Factors influencing consumer behavior- Market Segmentation: Meaning & Concept, Basis of segmentation, selection of segments, Market Segmentation strategies, Target Marketing, Product Positioning

UNIT II

5 Hours

MARKETING MIX

MARKETING MIX- Concept, elements, 7 Ps of marketing-Product Management: Product decision and strategies, Packaging,Product Life cycle concept, New Product development & strategy, Stages in New Product development,Branding.

UNIT III

7 Hours

MARKETING RESEARCH

Introduction, type of Market Research, Scope,Objectives and Limitations Marketing Research Techniques, Survey Questionnaire design and drafting, Pricing Research, Media Research, qualitative Research. Data analysis- Use of various statistical tools, descriptive and inference statistics, statistical hypothesis testing, multivariate analysis, discriminant analysis, cluster analysis, segmenting and positioning, factor analysis

UNIT IV**6 Hours****BUSINESS TO BUSINESS MARKETING**

Business to Business Marketing-Fundamental of business markets, Organizational buying process. Business buyer needs. Market and sales potential. Product in business markets. Relationship, networks and customer relationship management. Business to Business marketing strategy

UNIT V**5 Hours****INTERNET MARKETING**

Introduction to Internet Marketing. Mapping fundamental concepts of Marketing (7Ps, STP); Strategy and Planning for Internet Marketing

FOR FURTHER READING

Business to Business Marketing: Fundamental of business markets. Organizational buying process. Business buyer needs. Market and sales potential. Business to Business marketing strategy Product in business markets. Price in business markets. Place in business markets. Promotion in business markets. Relationship, networks and customer relationship management.

Total: 30 Hours**Reference(s)**

6. Service Marketing , S.M. Zha

22HS007**ENVIRONMENTAL SCIENCE****2 0 0 0****Course Objectives**

- Understand the interdisciplinary and holistic nature of the environment
- Identify the significance of natural resources and environment on the quality of life and stimulate the quest for sustainable development
- Assess the socio-economic, political and ethical issues in environmental science

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- g. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Course Outcomes (COs)

1. Explain the importance of interdisciplinary nature of environment studies, uses and exploitation of natural resources
2. Analyze the different types of ecosystems and biodiversity, its values and also role of professionals in protecting the environment from degradation
3. Identify the existing environmental challenges related to pollution and its management

4. Select suitable strategies for sustainable management of components of environmental science
5. Correlate the impacts of population and human activities on environment

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	1	2												
2	1	1												
3	2	2					1							
4	1													
5	2													

UNIT I

6 Hours

NATURAL RESOURCES

Forest resources: Use - over exploitation - deforestation - case studies. Water resources: Use - over utilization of surface and ground water - conflicts over water. Mineral resources: Use - exploitation - environmental effects of extracting and using mineral resources - case studies. Food resources: Effects of modern agriculture - fertilizer-pesticide problems (eutrophication, blue baby syndrome, biomagnification). Energy resources: renewable (solar, wind, and hydro).

UNIT II

6 Hours

ECOSYSTEMS AND BIODIVERSITY

Concept of an ecosystem: Structure and function of an ecosystem - producers - consumers - decomposers - food chains - food webs and ecological pyramids - Types of ecosystem: Introduction - characteristic features: desert ecosystem. Biodiversity - value of biodiversity - threats to biodiversity - endangered and endemic species - Conservation of biodiversity: In-situ and ex-situ conservation of biodiversity.

UNIT III

6 Hours

ENVIRONMENTAL POLLUTION

Pollution: Definition - causes - effects - control measures of air pollution - water pollution : (Sewage water treatment by activated sludge and trickling filter process) - noise pollution- thermal pollution. Disaster management: causes - effects - control measures of floods & earthquake

UNIT IV

7 Hours

SOCIAL ISSUES AND ENVIRONMENT

Sustainable development: Definition - Unsustainable to sustainable development - solid waste management - causes - effects - 5R Principles (landfills, incineration, composting). Water conservation - rain water harvesting - watershed management. Climate change - global warming - acid rain - ozone layer depletion. E-waste.

UNIT V

5 Hours

HUMAN POPULATION AND ENVIRONMENT

Human population: Population growth - characteristics - variation among nations - population explosion - value education - HIV / AIDS. Role of information technology in environment and human health - occupational safety and health administration (OSHA)

FOR FURTHER READING

Human rights: Biomedical waste -Identification of adulterants in food materials

Total: 30 Hours

5. A. K. De, Environmental Chemistry, 7th Edition , New age international publishers, New Delhi, 2014

Course Objectives

- Acquire knowledge in different phases of a compiler and its application.
- Understand the categorization of tokens using lexical analyzer and pattern recognition using parsers.
- Familiar with the optimization methods and code generation schemes.

Programme Outcomes (POs)

b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

Course Outcomes (COs)

1. Analyze the output generated in each phase of the compiler and construct finite automata for regular expression.
2. Construct Top down and Bottom up parser for Context free grammars.
3. Generate intermediate code for programming constructs
4. Analyze the memory allocation in the symbol table and improve the code using optimization techniques.
5. Analyze the issues in code generation

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	3	2	3		3									
2	2	3	3		3									
3		2	2											
4		2	1											
5		2	1											

UNIT I**9 Hours****INTRODUCTION**

Phases of compilation and overview-Lexical Analysis (scanner), Regular languages-Finite Automata-Regular expressions-Relating regular expressions and finite automata-Scanner generator(Lex, flex).

UNIT II**10 Hours****SYNTAX ANALYSIS (PARSER)**

Context-free languages and grammars, Push-down Automata-LL(1) grammars and top-down parsing, Operator grammars-LR(0)-SLR(1)-LR(1)-LALR(1) grammars and bottom-up parsing, Ambiguity and LR parsing, LALR(1) parser generator(yacc, bison)

UNIT III **9 Hours**

SEMANTIC ANALYSIS AND INTERMEDIATE CODE GENERATION

Attribute grammars-Syntax directed definition - Evaluation and flow of attribute in a syntax tree. Intermediate Code Generation: Translation of different language features, different types of intermediate forms

UNIT IV **9 Hours**

CODE IMPROVEMENT (OPTIMIZATION)

Symbol Table-Basic structure, Symbol attributes and management, Run-time environment, Procedure activation, Parameter passing, Value return, Memory allocation, Scope, Code Improvement (optimization)-Control-flow, Data-flow dependence, Local optimization, Global optimization, Loop optimization, Peep-hole optimization, etc

UNIT V **8 Hours**

ARCHITECTURE DEPENDENT CODE IMPROVEMENT

Instruction scheduling for pipeline-Loop optimization for cache memory etc, Register allocation and target code generation.

FOR FURTHER READING

Type systems-Data abstraction-Compilation of Object Oriented features and non-imperative programming languages.

1 **3 Hours**

EXPERIMENT 1

Develop a lexical analysers to recognize a few patterns for a given language. Ex. identifiers, constants, comments, operators etc. The lexical analyser should ignore redundant spaces, tabs and new lines. It should also ignore comments.

2 **3 Hours**

EXPERIMENT 2

Implement Lex programs for the following:
a. Count the number of characters, words , spaces and lines
b. Check valid Mobile Number
c. Accept valid email

3 **3 Hours**

EXPERIMENT 3

Write a program for syntax checking for looping statements using LEX and YACC.

4 **3 Hours**

EXPERIMENT 4

Write a program for syntax checking for control statements using LEX and YACC

5 **3 Hours**

EXPERIMENT 5

Write a program for syntax checking for declaration statements using LEX and YACC

6 **3 Hours**

EXPERIMENT 6

Write a program for syntax checking for functions using LEX and YACC

7 3 Hours

EXPERIMENT 7

Implement a desk calculator using LEX and YACC

8 3 Hours

EXPERIMENT 8

Generate three address code for a simple program using LEX and YACC

9 3 Hours

EXPERIMENT 9

Implementation of Code Optimization techniques

10 3 Hours

EXPERIMENT 10

Implementation of Code generation technique for an optimized intermediate code

Total: 45+30 =75 Hours

BUSINESS STRATEGY

2 0 0 2

Course Objectives

- To help the students to learn the process of strategic management
- To scan internal and external environment with the help of appropriate tools for strategic decision making
- To expose students to the strategic ideas of diversification and growth in management
- To help students develop skills for applying management concepts as a solution to the business problems
- To enable the students to have an insight into strategic implementation and control

Programme Outcomes (POs)

e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

i. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Apply the fundamental concepts of business management strategic
2. Apply holistic approach by integrating various perspectives to develop appropriate organizational policies and strategies
3. Analyze and make decisions in through various tools and techniques

4. Predict the growth avenues against the backdrop of the opportunities
5. Develop the skills on implementation of strategy through organizational structure and control systems

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2					2				2					2
3					1				1					1
4					2				2					2
5					2				2					2

UNIT I

6 Hours

INTRODUCTION TO STRATEGIC MANAGEMENT

Importance of Strategic Management-Vision and Objectives-Schools of thought in Strategic Management-Strategy Content, Process, and Practice-Fit Concept and Configuration Perspective in Strategic Management

UNIT II

6 Hours

INTERNAL ENVIRONMENT OF FIRM

Recognizing a Firms Intellectual Assets-Core Competence as the Root of Competitive Advantage-Sources of Sustained Competitive Advantage-Business Processes and Capabilities-based Approach to Strategy

UNIT III

6 Hours

EXTERNAL ENVIRONMENTS OF FIRM

Competitive Strategy -Five Forces of Industry Attractiveness that Shape Strategy -The concept of Strategic Groups, and Industry Life Cycle-Generic Strategies-Generic Strategies and the Value Chain

UNIT IV

6 Hours

CORPORATE STRATEGY, AND GROWTH STRATEGIES

The Motive for Diversification-Related and Unrelated Diversification-Business Portfolio Analysis-Expansion, Integration and Diversification-Strategic Alliances, Joint Ventures, and Mergers & Acquisitions

UNIT V

6 Hours

STRATEGY IMPLEMENTATION

Structure and Systems -The 7S Framework -Strategic Control and Corporate Governance

Total: 30 Hours

Reference(s)

2. M.E. Porter, Competitive Strategy, first Edition, THE FREE PRESS,1980.
3. Richard Rumelt, Competitive Advantage, 2011
4. Richard Rumelt, Good Strategy Bad Strategy: The Difference and Why It Matters, Profile Books,2011.

Course Objectives

- Understand the basics of UML diagrams.
- Impart knowledge about the principles of object-oriented methodologies.
- Build a conceptual model during analysis and design.

Programme Outcomes (POs)

b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Analyse the object oriented technologies in software development process using real world scenarios.
2. Apply the concept of object oriented software development for requirement analysis using case modelling.
3. Implement sequence diagram and collaboration diagram to identify objects from flow of events.
4. Design the Object Oriented Methodologies with interaction diagrams.
5. Design dynamic, component diagram and deployment models for object oriented system development.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1		3	2		1									1
2		2	3		2									1
3		2	3		1									1
4		2	3		1									1
5		2	3		1									1

UNIT I**6 Hours****INTRODUCTION TO ON OBJECT ORIENTED TECHNOLOGIES AND THE UML METHOD**

Software development process: The Waterfall Model vs. The Spiral Model - The Software Crisis, description of the real world using the Objects Model- Classes, inheritance and multiple configurations- Quality software characteristics- Description of the Object Oriented Analysis process vs. the Structure Analysis Model.

UNIT II **6 Hours**

INTRODUCTION TO THE UML LANGUAGE AND CASE MODELLING

UML Language: Standards- Elements of the language- General description of various models- The process of Object-Oriented software development - Description of Design Patterns – Technological Description of Distributed Systems. Case Modeling: Analysis of system requirements- Actor definitions- Writing a case goal- Use Case Diagrams- Use Case Relationships.

UNIT III **6 Hours**

TRANSFER FROM ANALYSIS TO DESIGN IN THE CHARACTERIZATION STAGE INTERACTION DIAGRAMS

Description of goal - Defining UML Method, Operation, Object Interface, Class - Sequence Diagram - Finding objects from Flow of Events - Describing the process of finding objects using a Sequence Diagram - Describing the process of finding objects using a Collaboration Diagram.

UNIT IV **6 Hours**

TRANSFER FROM ANALYSIS TO DESIGN IN THE CHARACTERIZATION STAGE INTERACTION DIAGRAMS

The Class Diagram Model: Attributes descriptions-Operations descriptions - Connections descriptions in the Static Model-Association, Generalization, Aggregation, Dependency, Interfacing, Multiplicity. Package Diagram Model: Description of the model-White box, black box - Connections between packages - Interfaces-Create Package Diagram - Drill Down.

UNIT V **6 Hours**

DYNAMIC, COMPONENT DIAGRAM AND DEPLOYMENT MODELS

Dynamic Model: Description of the State Diagram - Events Handling - Description of the Activity Diagram - Exercise in State Machines. Component Diagram Model: Physical Aspect - Logical Aspect - Connections and Dependencies - User face - Initial DB design in a UML environment. Deployment Model: Processors - Connections - Components - Tasks - Threads - Signals and Events.

1 **3 Hours**

EXPERIMENT 1

Identify Use Cases and develop the Use Case model.

2 **3 Hours**

EXPERIMENT 2

Identify the conceptual classes and develop a domain model with UML Class diagram.

3 **3 Hours**

EXPERIMENT 3

Use the identified scenarios find the interaction between objects and represent them using UML

4 **3 Hours**

EXPERIMENT 4

To implement Sequence diagrams

5 **3 Hours**

EXPERIMENT 5

Draw relevant state charts and activity diagrams.

6 **3 Hours**

EXPERIMENT 6

Identify the User Interface, Domain objects, and Technical services. Draw the partial layered, logical

7 **3 Hours**

EXPERIMENT 7

Draw architecture diagram with UML package diagram notation.

8 **3 Hours**

EXPERIMENT 8

Develop and test the Technical services layer.

9 **3 Hours**

EXPERIMENT 9

Develop and test the Domain objects layer

10 **3 Hours**

EXPERIMENT 10

Develop and test the User interface layer.

Total: 30+30 =60 Hours

Reference(s)

2. Design Patterns: Elements of Reusable Object-Oriented Software. Erich Gamma, Richard Helm, Ralph Johnson, and John M. Vlissides

22CB504

FINANCIAL AND COST ACCOUNTING

2 0 0 2

Course Objectives

- To enable students to read and understand Financial Statements
- To provide insights about the concepts of Financial Management and its application for managerial decision making
- To provide an in depth study Accounting Principles and Techniques for Managerial Decision Making
- To acquaint the students with fundamental principles of accounting
- To enhance the knowledge of students in the areas of Costing, Budgeting and Marginal Costing Techniques

Programme Outcomes (POs)

d. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

k. Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Understand and explain the conceptual framework of Financial & Cost Accounting
2. Apply the basic concepts in Preparation of Final Accounts using the principle of GAAP
3. Analyze and interpretation of Income Statement and Balance Sheet
4. Evaluate the overheads and other costs across various products
5. Gain insights about the need of Material cost & Methods to control Manufacturing cost

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

4				3							3			3
5				2							3			3

UNIT I

6 Hours

ACCOUNTING CONCEPT

Introduction, Techniques and Conventions, Financial Statements- Understanding and Interpreting Financial Statements

UNIT II

6 Hours

ACCOUNTING PROCESS

Book Keeping and Record Maintenance - Fundamental Principles and Double Entry - Journal, Ledger, Trial Balance, Balance Sheet, Final Accounts - Cash Book and Subsidiary Books - Rectification of Errors

UNIT III

6 Hours

FINANCIAL STATEMENTS

Form and Contents of Financial Statements, Analyzing and Interpreting Financial Statements, Accounting Standards. Class Discussion: Corporate Accounting Fraud- A Case Study of Satyam Cash Flow and Fund Flow Techniques: Introduction, how to prepare, Difference between them

UNIT IV

6 Hours

COSTING SYSTEMS

Elements of Cost, Cost behavior, Cost Allocation, OH Allocation, Unit Costing, Process Costing, Job Costing, Absorption Costing, Marginal Costing, cost volume Profit Analysis, Budgets, ABC Analysis, Class Discussion-Application of costing concepts in the service sector

UNIT V

6 Hours

COMPANY ACCOUNTS AND ANNUAL REPORTS

Audit Reports and Statutory Requirements-Directors Report-Notes to Accounts-Pitfalls

Total: 30 Hours

References

1. Robert N Anthony, David Hawkins, Kenneth Marchant, Accounting Texts and Cases, McGrawHill.2017.

Course Objectives

- Develop technical writing skills
- Practice self-analysis techniques like SWOT & TOWS
- Understand key concepts of pluralism & cultural spaces
- Sensitise the cross-cultural communication
- Develop the science of nation building

Programme Outcomes (POs)

i. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

j. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

1. Identify the best practices of technical writing & apply technical writing in real life scenarios
2. Apply & analyze the basic principles of SWOT & life positions
3. Identify & respect pluralism in cultural spaces
4. Identify the common mistakes made in cross-cultural communication
5. Understand, analyze & leverage the power of motivation in real life

1. Raman, Meenakshi and Sangeeta Sharma. Fundamentals of Technical Communication. (2014)
2. Fine, Lawrence G. The SWOT Analysis: Using Your Strength to Overcome Weaknesses, Using Opportunities to Overcome Threats. (2009)

Course Objectives

- Understand the network protocols, architecture and applications
- Gain knowledge about the functions of different network layers
- Familiar with the various aspects of computer networks

Programme Outcomes (POs)

e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

g. Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Apply the basic concept in modern data communication and computer networking
2. Apply the functions of different layers and in depth knowledge of data link layer
3. Analyze the different protocols and network layer components
4. Criticize the basic functions of transport layer and congestion in networks
5. Analyze the working of application layer along with the protocols used

INFORMATION SECURITY

3 0 0 3

Course Objectives

- Understand information security" s importance in our data-driven digital world.
- Acquire the knowledge of key concepts of information security and how they work.
- Develop a Security mindset learn how to critically analyze situations of computer and network usage from a security perspective, identifying the salient issues, technologies, policies, laws, standards, and practices.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- g. Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

- h. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- l. Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.
- n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Examines the business drivers behind the information security analysis design process
2. Predict the major competence for each of the levels of security algorithms
3. Apply the suitable tree and graph algorithms in security technologies
4. Apply the suitable NP-hard data structure approaches for tractable and intractable problems
5. Analyze the different advanced algorithms for the security process

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

4		3	2	3	1		2						2	
5		2	1	2			2	3						1

UNIT I

7 Hours

OVERVIEW OF SECURITY PARAMETERS

Overview: Confidentiality, integrity and availability - Security violation and threats- Security policy and procedure- Assumptions and Trust- Security Assurance, Implementation and Operational Issues- Security Life Cycle.

UNIT II

10 Hours

ACCESS CONTROL MODELS AND SECURITY POLICIES

Access Control Models: Discretionary, mandatory, role-based and task-based models, unified models, access control algebra, temporal and spatio-temporal models. Security Policies: Confidentiality policies, integrity policies, hybrid policies, non-interference and policy composition, international standards.

UNIT III

10 Hours

SYSTEM DESIGN

Systems design: Design principles, representing identity, control of access and information flow, confinement problem. Assurance: Building systems with assurance, formal methods, evaluating systems.

UNIT IV

10 Hours

LOGIC BASED SYSTEM

Malicious logic, vulnerability analysis, auditing, intrusion detection. Applications: Network security, operating system security, user security, program security. Special Topics: Data privacy, introduction to digital forensics, enterprise security specification.

UNIT V**8 Hours****OPERATING SYSTEMS SECURITY AND DATABASE SECURITY**

Operating Systems Security: Security Architecture, Analysis of Security in Linux/Windows. Database Security: Security Architecture, Enterprise security, Database auditing.

Total: 45 Hours**Reference(s)**

1. Security Engineering, Ross Anderson
2. Computer Security: Art and Science, M. Bishop, Pearson Education.
3. Information Security: Principles and Practice, M. Stamp.
4. Security in Computing, C.P. Pfleeger, S.L. Pfleeger, J. Margulies
5. Secure Programming HOWTO, David Wheeler.
6. Browser Security Handbook, Michael Zalewski.

22CB603**ARTIFICIAL INTELLIGENCE****3 0 2 4****Course Objectives**

- Provide comprehensive and in-depth knowledge of AI principles and techniques by introducing AI fundamental problems
- Understand the basic concepts of analytic functions and method of construction in complex analysis

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

Course Outcomes (COs)

1. Compare AI with human intelligence and traditional information processing, and discuss its strengths and limitations and its application to complex and human-centered problems
2. Analyze the structures and algorithms selection in Artificial Intelligence techniques related to searching techniques
3. Analyze the Importance of constraint satisfaction problem
4. Develop the predicate logic to solve knowledge representation issues.
5. Develop the probabilistic reasoning and planning techniques for the various systems

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	1	2											1	
3	1	2											1	
4	2	2	2										1	
5	2	2	2										1	

UNIT I

7 Hours

INTRODUCTION AND OVERVIEW OF ARTIFICIAL INTELLIGENCE

Problems of AI- AI technique, -Tic - Tac - Toe Problem-Intelligent Agents- Agents & environment-nature of environment- structure of agents- goal based agents- utility based agents- learning agents.

UNIT II

11 Hours

PROBLEM SOLVING AND SEARCH TECHNIQUES

Defining the problem as state space search- production system- problem characteristics- issues in the design of search programs. Problem solving agents- searching for solutions- uniform search strategies: breadth first search, -depth first search- depth limited search- bidirectional search-comparing uniform search strategies. Heuristic search strategies Greedy best-first search- A* search-AO* search- memory bounded heuristic search: local search algorithms & optimization problems: Hill climbing search-simulated annealing search- local beam search

UNIT III

9 Hours

CONSTRAINT SATISFACTION PROBLEMS

Local search for constraint satisfaction problems- Adversarial search- Games, optimal decisions & strategies in games- the minimax search procedure- alpha-beta pruning- additional refinements-iterative deepening. Expert Systems: Representing and using domain knowledge, expert system shells, and knowledge acquisition.

UNIT IV

9 Hours

KNOWLEDGE REPRESENTATION

Knowledge representation issues- representation & mapping- approaches to knowledge representation. Using predicate logic- representing simple fact in logic- representing instant & ISA relationship-computable functions & predicates- resolution, natural deduction. Representing knowledge using rules- Procedural verses declarative knowledge- logic programming- forward verses backward reasoning-matching- control knowledge.

UNIT V

9 Hours

REASONING

Probabilistic reasoning: Representing knowledge in an uncertain domain, the semantics of Bayesian networks, Dempster-Shafer theory, Planning Overview, components of a planning system, Goal stack planning, Hierarchical planning, other planning techniques.

1

3 Hours

EXPERIMENT 1

Solving Missionaries and cannibals problems

2	3 Hours
EXPERIMENT 2 Solving Water Jug Problem	
3	3 Hours
EXPERIMENT 3 Solving 8 queens problem	
4	3 Hours
EXPERIMENT 4 Travelling Salesman Problem	
5	3 Hours
EXPERIMENT 5 Solving Wampus Problem using Logic	
6	3 Hours
EXPERIMENT 6 Monkeys and Bananas Problem using Logic	
7	3 Hours
EXPERIMENT 7 Bayesian Classification Problem	
8	3 Hours
EXPERIMENT 8 Decision Tree Problem	
9	3 Hours
EXPERIMENT 9 Developing a sentiment analysis system	
10	3 Hours
EXPERIMENT 10 Development of Medical Expert system with Recommendation system	

Total: 45+30 =75 Hours

Course Objectives

- Understand the basic working principles of MATLAB.
- Understand the workspace and miscellaneous commands of MATLAB.
- Analysing matrix, array and basic mathematical functions
- Applying the basic plotting done using MATLAB
- Apply the different programming logics which help to complete different plotting structures.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.
- n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Formulate the basic principles of MATLAB operations
2. Represent the working session and multiple statements per line in MATLAB.
3. Represent the concepts of sub matrix and its operation
4. Apply the language of graphs and trees to the real world problems.
5. Apply formalized arguments based on conditional looping statements

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	1	2											2	
2	2	2												2
3	1				2									
4	3												1	2
5	1				1									

UNIT I**6 Hours****MATLAB**

History - basic features - strengths and weaknesses - good programming practices and plan your code.
 Creating MATLAB variables - overwriting variable - error messages - making corrections - controlling the hierarchy of operations or precedence - controlling the appearance of floating point number

UNIT II **6 Hours**

WORKSPACE AND MISCELLANEOUS COMMANDS

Managing the workspace - keeping track of your work session - entering multiple statements per line - miscellaneous commands.

UNIT III **6 Hours**

MATRIX, ARRAY AND BASIC MATHEMATICAL FUNCTIONS

Matrix generation, entering a vector, entering a matrix - matrix indexing, colon operator - linear spacing - creating a sub-matrix - dimension, matrix operations and functions matrix generators - special matrices- array and array operations - solving linear equations- other mathematical functions.

UNIT IV **6 Hours**

BASIC PLOTTING

Overview - creating simple plots - adding titles - axis labels - and annotations - multiple data sets in one plot - specifying line styles and colours.

UNIT V **6 Hours**

INTRODUCTION TO PROGRAMMING

Introduction - M-File Scripts - script side-effects - M-File functions - anatomy of a M-File function - input and output arguments - input to a script file - output commands - Control flow and operators- if-end, structure - relational and logical operators-for-end, loop-while, end, loop-other flow structures, operator precedence, saving the output to a file-Debugging M-files-Debugging process, preparing for debugging, setting breakpoints, running with breakpoints-examining values-correcting and ending debugging-correcting an M-file, Implementation of various Image Processing Algorithms

1 **4 Hours**

EXPERIMENT 1

Write a MATLAB program to generate Fourier series of a Square Wave.

2 **4 Hours**

EXPERIMENT 2

Write a MATLAB program to Calculate and plot using MATLAB Fourier Transform and Z-Transform of a given signal.

3 **5 Hours**

EXPERIMENT 3

Write a MATLAB program to plot the following continuous time and discrete time Signals. (i). Step Function (ii). Impulse Function (iii). Exponential Function (iv). Ramp Function (v). Sine Function

4 **4 Hours**

EXPERIMENT 4

Write a MATLAB program to plot magnitude and phase response of a given system.

5 **4 Hours**

EXPERIMENT 5

Write a MATLAB program to Calculate and plot using MATLAB Fourier Transform and Z-Transform of a given signal.

6

5 Hours

EXPERIMENT 6

Write a MATLAB program to obtain Cross correlation of sequence $x(n)$ and $y(n)$ & autocorrelation of a sequence $x(n)$ of the given sequences & verify the property.

7

4 Hours

EXPERIMENT 7

Write a MATLAB program to obtain linear convolution of the given sequences.

Total: 30+30 =60 Hours

2. MATLAB: A Practical Introduction to Programming and Problem Solving. Stormy Attaway, Butterworth-Heinemann, 2017.

Course Objectives

- Acquire Knowledge of quantitative user design and evaluating product assignments
- Independently plan, perform and make a report about both an expert evaluation and an evaluation of assignment and research.
- Describe the relation between design review and evaluation of projects, especially the relation between usability and design

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.
- n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Understand the user-centered design process to evaluate the different Assignments
2. Apply heuristic evaluation techniques to evaluate the website and application
3. Generate ideas for developing and testing innovation through an assignment presentation
4. Understand the UX research techniques for analysing the application
5. Analyse the personal technique for different projects

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

4	2	1	2	3	2								1	2
5	2	2	1	2	1								2	2

UNIT I **9 Hours**

INTRODUCTION TO USER CENTRED DESIGN

Aspects of User Centred Design - Product Appreciation Assignment - Evaluating the product from user centred design aspects such as functionality - ease of use - ergonomics - aesthetics.

UNIT II **9 Hours**

HEURISTIC EVALUATION

Heuristic Evaluation-10 Heuristic Principles-Examples-Heuristic Evaluation-Group Assignment initiation -Website and App- Evaluation for key tasks of the app or website for heuristic principles- severity - recommendations.

UNIT III **9 Hours**

GROUP ASSIGNMENT PRESENTATIONS AND REVIEWS

Discovery -Define-Design-Implement-Design Prototype -Usability Testing.

UNIT IV **9 Hours**

UX RESEARCH

Understanding users -their goals -context of use-environment of use-Research Techniques-Contextual Enquiry-User Interviews -Competitive Analysis for UX.

UNIT V **9 Hours**

SCENARIOS AND PERSONA TECHNIQUE

Presentation of Personas for the group project-Design Thinking Technique -Discovery and brainstorming-Concept Development-Task flow detailing for the Project-Prototyping Techniques- Paper-Electronic -Prototyping Tools

Total: 45 Hours

Course Objectives

- Understand how service performance can be improved by studying services operations management
- Analyse the Service facility design, facility location and Service Quality
- Analyse the role of inventory in services and managing the service supply relationship

Programme Outcomes (POs)

c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

i. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

j. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Understand the concept of service operation system
2. Analysis of service development and delivery system
3. Understand the service design and quality
4. Explore the forecasting demand of services
5. Analyse the strategies for managing service supply relationship

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	1		1										1	
2	1	2	2										1	
3	1	2	1		2					1				1
4					1									
5									1	1				1

UNIT I**8 Hours****INTRODUCTION**

Introduction-Introduction to the course-Introduction to service operations-Role of service in economy and society-Introduction to Indian service sector-Nature of Services and Service Encounters-

Differences between services and operations-Service package-characteristics-various frameworks to design service operation system-Kind of service encounter-importance of encounters.

UNIT II **10 Hours**

SERVICE-DOMINANT LOGIC

From Goods-Dominant logic to Service-Dominant Logic-Value Co-creation-Service Strategy and Competitiveness-Development of Strategic Service Vision (SSV) -Data Envelopment Analysis-New Service Development-NSD cycle -Service Blueprinting-Elements of service delivery system.

UNIT III **9 Hours**

SERVICE DESIGN

Customer Journey and Service Design-Design Thinking methods to aid Service Design-Locating facilities and designing their layout-models of facility locations (Huff's retail model) -Role of service-scape in layout design-Service Quality-SERVQUAL-Walk through Audit-Dimensions of Service quality & other quality tools-Service Guarantee & Service Recovery-How to provide Service guarantee-How to recover from Service failure

UNIT IV **9 Hours**

FORECASTING DEMAND FOR SERVICES

A review of different types of forecasting methods for demand forecasting-Managing Capacity and Demand-Strategies for matching capacity and demand-Psychology of waiting-Application of various tools used in managing waiting line in services -Managing Facilitating Goods-Review of inventory models-Role of Inventory in services.

UNIT V **9 Hours**

MANAGING SERVICE SUPPLY RELATIONSHIP

Understanding the supply chain/hub of service-Strategies for managing suppliers of service-Vehicle Routing Problem-Managing after sales service-Understanding services that involve transportation of people and vehicle-Techniques for optimizing vehicle routes-Service Innovation-Services Productivity-Need for Services Innovation.

1 **4 Hours**

EXPERIMENT 1

Design a new super market in a cosmopolitan city (Identify important attributes, specify attribute levels, experimental design, presentation of alternatives to respondents and estimation of choice model)

2 **4 Hours**

EXPERIMENT 2

Choose any service organization and present it from the perspective of nature of service, classification of service, blueprint or service design analysis, and service quality

3 **3 Hours**

EXPERIMENT 3

Prepare a service blueprint for a fast-food outlet.

4 **3 Hours**

EXPERIMENT 4

Using data, software, user and mashup as services prepare a next gen service-oriented architecture.

5 **4 Hours**

EXPERIMENT 5

Prepare a review article after analysing 5 relevant papers in services and explain your understanding and feedback on the same.

6 **4 Hours**

EXPERIMENT 6

Analyse a fortune 500 company in digital media and point out how these technologies could be effectively used in a start up in digital space.

7 **4 Hours**

EXPERIMENT 7

Analyse the booking policy of an international flight operator, assuming that the average number of no shows is 10 percent, explain why the best overbooking necessary isn't be 10 percent always.

8 **4 Hours**

EXPERIMENT 8

Prepare a comparative chart analysing any four food delivery agencies and rank them based on reliability, responsiveness, assurance, and empathy.

Total: 45+30 =60 Hours

Course Objectives

- To outline an overview of exploratory data analysis.
- To implement data cleaning and preparation techniques.
- To perform descriptive statistics and data visualization techniques to present insights from the data.
- To apply univariate, bivariate, multivariate, correlation, and time series data exploration and analysis techniques
- To use dimensionality reduction techniques for simplifying complex datasets and visualizing high-dimensional data.

Programme Outcomes (POs)

- Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Course Outcomes (COs)

1. Understand the fundamentals of exploratory data analysis.
2. Implement the data cleaning and preparation techniques.
3. Apply advanced data visualization techniques to explore complex relationships and patterns in the data.
4. Analyze and interpret relationships between variables using EDA analysis techniques to gain insights into complex data patterns.
5. Apply dimensionality reduction techniques, such as Principal Component Analysis (PCA), to simplify complex datasets and extract essential features.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	2	2	2	3	3									
3	2	3	2	2	3									
4	2	2	2	2	3									
5	2	2	3	2	1									

UNIT I **6 Hours**

EXPLORATORY DATA ANALYSIS

Overview of Exploratory Data Analysis- importance of EDA - data analysis process: data collection, data cleaning, and data exploration- Introduction to common data types and formats - Introduction to Python - data analysis libraries.

UNIT II **6 Hours**

DATA CLEANING AND PREPARATION

Introduction to data quality issues and common data cleaning techniques - Handling missing data and outliers - Data transformation techniques - Feature engineering and variable creation.

UNIT III **6 Hours**

DESCRIPTIVE STATISTICS AND DATA VISUALIZATION

Descriptive statistics: measures of central tendency, dispersion, and shape - Data visualization principles and best practices - Exploratory data visualization using Matplotlib and Seaborn

UNIT IV **6 Hours**

EXPLORATORY DATA ANALYSIS TECHNIQUES

Univariate analysis: exploring single variables - Bivariate analysis: exploring relationships between variables - Multivariate analysis: analyzing relationships among multiple variables - Exploring time series data.

UNIT V **6 Hours**

DIMENSIONALITY REDUCTION TECHNIQUES

Introduction to dimensionality reduction - Principal Component Analysis (PCA) and its applications - Distributed Stochastic Neighbor Embedding (t-SNE) for visualization

FOR FURTHER READING

Text Analysis and Natural Language Processing (NLP)- Advanced Data Visualization- Plotly, Bokeh, and D3.js- Handling Imbalanced Data.

1 **5 Hours**

EXPERIMENT 1

Explore the Titanic dataset using descriptive statistics and data visualization.

1. Load the Titanic dataset.
2. Calculate the descriptive statistics for each variable.
3. Create a variety of data visualizations to explore the relationships between variables.
4. Interpret the results of the descriptive statistics and data visualizations.

2 **5 Hours**

EXPERIMENT 2

Clean and prepare the California housing dataset for analysis.

1. Identify and handle missing data.
2. Identify and remove outliers.
3. Convert categorical variables to numerical variables.
4. Explore the distribution of the data after cleaning and preparing it.

3 **5 Hours**

EXPERIMENT 3

Perform univariate analysis on the Iris dataset.

1. Calculate the descriptive statistics for each variable.

2. Create a variety of data visualizations to explore the distribution of each variable.
3. Interpret the results of the descriptive statistics and data visualizations.

4

5 Hours

EXPERIMENT 4

Perform bivariate analysis on the Boston housing dataset.

1. Explore the relationship between housing prices and different features of the houses, such as the number of rooms, the lot size, and the crime rate.
2. Use data visualization to explore the relationships between variables.
3. Interpret the results of the bivariate analysis.

5

5 Hours

EXPERIMENT 5

Perform multivariate analysis on the Wine dataset.

1. Explore the relationships between different features of the wine, such as the color, the acidity, and the alcohol content.
2. Use data visualization to explore the relationships between variables.
3. Interpret the results of the multivariate analysis.

6

5 Hours

EXPERIMENT 6

Apply dimensionality reduction techniques to the MNIST dataset.

1. Use PCA to reduce the dimensionality of the dataset from 784 dimensions to 2 dimensions.
2. Visualize the reduced data using a scatter plot.
3. Interpret the results of the dimensionality reduction.

Total: 30+30 =60 Hours

Course Objectives

- To understand the foundations of the recommender system.
- To learn the significance of machine learning and data mining algorithms for Recommender systems
- To learn about collaborative filtering
- To make students design and implement a recommender system.
- To learn collaborative filtering.

Programme Outcomes (POs)

- f. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- g. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- h. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- i. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- j. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- n. Design and develop cost-effective solutions based on cutting-edge hardware and software tools and techniques to meet global requirements.

Course Outcomes (COs)

1. Understand the basic concepts of recommender systems.
2. Implement machine-learning and data-mining algorithms in recommender systems data sets.
3. Implementation of Collaborative Filtering in carrying out performance evaluation of recommender systems based on various metrics.
4. Implement a simple recommender system.
5. Learn about Evaluating Paradigms of recommender systems and its applications.

5	2	2	1	2	1									1

UNIT I **9 Hours**
INTRODUCTION

Introduction and basic taxonomy of recommender systems - Traditional and non-personalized Recommender Systems - Overview of data mining methods for recommender systems- similarity measures- Dimensionality reduction – Singular Value Decomposition (SVD)

UNIT II **9 Hours**
CONTENT-BASED RECOMMENDATION SYSTEMS

High-level architecture of content-based systems - Item profiles, Representing item profiles, Methods for learning user profiles, Similarity-based retrieval, and Classification algorithms.

UNIT III **9 Hours**
COLLABORATIVE FILTERING

A systematic approach, Nearest-neighbor collaborative filtering (CF), user-based and item-based CF, components of neighborhood methods (rating normalization, similarity weight computation, and neighborhood selection)

UNIT IV **9 Hours**
ATTACK-RESISTANT RECOMMENDER SYSTEMS

Introduction – Types of Attacks – Detecting attacks on recommender systems – Individual attack – Group attack – Strategies for robust recommender design - Robust recommendation algorithms.

UNIT V **9 Hours**
EVALUATING RECOMMENDER SYSTEMS

Evaluating Paradigms – User Studies – Online and Offline evaluation – Goals of evaluation design – Design Issues – Accuracy metrics – Limitations of Evaluation measures

Total: 45 Hours

BIG DATA ANALYTICS

3 0 0 3

Course Objectives

- Acquire a deep understanding of big data and NoSQL.
- Develop expertise in mapreduce analytics using Hadoop and related tools
- Explore the Hadoop related tools for Big Data Analytics.

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- m. Apply suitable algorithmic thinking and data management practices to design, develop, and evaluate effective solutions for real-life and research problems.
- n. Design and develop cost-effective solutions based on cutting-edge hardware and software tools and techniques to meet global requirements.

Course Outcomes (COs)

1. Understand the big data and use cases from selected business domains.
2. Understand NoSQL big data management.
3. Utilize map reduce analytics and related tools.
4. Understand the basics of Hadoop.
5. Apply the usage of Hadoop related tools for Big Data Analytics.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2	1	1		1								2	1
2	2	2	3		3								2	2
3	1	3	3		3								2	2
4	2	2	2		3								1	2
5	2	2	1		3								1	3

UNIT I

9 Hours

UNDERSTANDING BIG DATA

Introduction to big data – Convergence of key trends – Unstructured data – Industry examples of big data – Web analytics – Big data applications– Big data technologies – Introduction to Hadoop – Open source technologies – Cloud and big data – Mobile business intelligence – Crowd sourcing analytics – Inter and trans firewall analytics.

UNIT II

9 Hours

NOSQL DATA MANAGEMENT

Introduction to NoSQL – Aggregate data models – Key-value and document data models – Relationships – Graph databases – Schema less databases – Materialized views – Distribution models – Master-slave replication – Consistency - Cassandra – Cassandra data model – Cassandra examples – Cassandra clients

UNIT III

10 Hours

MAP REDUCE APPLICATIONS

MapReduce workflows – Unit tests with MRUnit – Test data and local tests – Anatomy of MapReduce job run – Classic Map-reduce – YARN – Failures in classic Map-reduce and YARN – Job scheduling – Shuffle and sort – Task execution – MapReduce types – Input formats – Output formats.

UNIT IV

9 Hours

BASICS OF HADOOP

Data format – Analyzing data with Hadoop – Scaling out – Hadoop streaming – Hadoop pipes – Design of Hadoop distributed file system (HDFS) – HDFS concepts – Java interface – Data flow – Hadoop I/O- Data integrity – Compression – Serialization – Avro – File-based data structures - Cassandra – Hadoop integration.

UNIT V

9 Hours

HADOOP RELATED TOOLS

Hbase – Data model and implementations – Hbase clients – Hbase examples – Praxis. Pig – Grunt – Pig data model – Pig Latin – Developing and testing Pig Latin scripts. Hive – Data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.

FOR FURTHER READING

Selecting NoSQL / SQL based on applications – Bigquery – Data analytics with R language – Connecting to Mongo DB – Connecting to Cassandra – Linear Regression – Clustering – Collaborative filtering – Association rule mining – Decision tree.

Total: 45 Hours

NEURAL NETWORKS AND DEEP LEARNING

2 0 2 3

Course Objectives

- To understand the major concepts in deep neural networks.
- To apply Convolutional Neural Network architectures for any real-life applications
- To analyze the key computations underlying deep learning to build and train deep neural networks for various tasks.

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- m. Apply suitable algorithmic thinking and data management practices to design, develop, and evaluate effective solutions for real-life and research problems.

Course Outcomes (COs)

1. Apply Convolution Neural Network for any suitable applications.
2. Analyze the various categories of associative memory and unsupervised learning networks.

3. Apply Convolutional Neural Networks and its variants for any suitable applications.
4. Analyze the key computations underlying deep learning and use them to build and train deep neural networks for various tasks.
5. Apply autoencoders and generative models for suitable applications.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	2	2	3		3								2	
3	1	3	3		3								2	
4	2	2	2		3								2	
5	2	2	1		3								2	

UNIT I

6 Hours

UNDERSTANDING NEURAL NETWORKS

Neural Networks-Application Scope of Neural Networks-Artificial Neural Network: An Introduction Evolution of Neural Networks-Basic Models of Artificial Neural Network- Important Terminologies of ANNs-Supervised Learning Network.

UNIT II

6 Hours

ASSOCIATIVE MEMORY AND UNSUPERVISED LEARNING NETWORKS

Training Algorithms for Pattern Association-Autoassociative Memory Network-Heteroassociative Memory Network-Bidirectional Associative Memory (BAM)-Hopfield Networks-Iterative Autoassociative Memory Networks-Temporal Associative Memory Network-Fixed Weight Competitive Nets-Kohonen Self-Organizing Feature Maps-Learning Vector Quantization-Counter propagation Networks-Adaptive Resonance Theory Network.

UNIT III

6 Hours

THIRD-GENERATION NEURAL NETWORKS

Spiking Neural Networks-Convolutional Neural Networks-Deep Learning Neural Networks-Extreme Learning Machine Model-Convolutional Neural Networks: The Convolution Operation – Motivation – Pooling – Variants of the basic Convolution Function – Structured Outputs – Data Types – Efficient Convolution Algorithms – Neuroscientific Basis – Applications: Computer Vision, Image Generation, Image Compression.

UNIT IV

6 Hours

DEEP FEEDFORWARD NETWORKS

History of Deep Learning- A Probabilistic Theory of Deep Learning- Gradient Learning – Chain Rule and Backpropagation - Regularization: Dataset Augmentation – Noise Robustness -Early Stopping, Bagging and Dropout - batch normalization- VC Dimension and Neural Nets.

UNIT V

6 Hours

RECURRENT NEURAL NETWORKS

Recurrent Neural Networks: Introduction – Recursive Neural Networks – Bidirectional RNNs – Deep Recurrent

Networks – Applications: Image Generation, Image Compression, Natural Language Processing. Complete Auto encoder, Regularized Autoencoder, Stochastic Encoders and Decoders, Contractive Encoders.

FOR FURTHER READING

Neocognition architecture – Neocognition Data processing – Generative Deep Learning- Deep Learning for Time Series

1 EXPERIMENT 1 Implement simple vector addition in TensorFlow.	3 Hours
2 EXPERIMENT 2 Implement a regression model in Keras.	3 Hours
3 EXPERIMENT 3 Implement a perceptron in TensorFlow/Keras Environment.	3 Hours
4 EXPERIMENT 4 Implement a Feed-Forward Network in TensorFlow/Keras.	3 Hours
5 EXPERIMENT 5 Implement an Image Classifier using CNN in TensorFlow/Keras.	3 Hours
6 EXPERIMENT 6 Improve the Deep learning model by fine tuning hyper parameters.	3 Hours
7 EXPERIMENT 7 Implement a Transfer Learning concept in Image Classification.	3 Hours
8 EXPERIMENT 8 Using a pre trained model on Keras for Transfer Learning	3 Hours
9 EXPERIMENT 9 Perform Sentiment Analysis using RNN	3 Hours
10 EXPERIMENT 10 Implement an LSTM based Auto encoder in TensorFlow/Keras.	3 Hours

NATURAL LANGUAGE PROCESSING

3 0 0 3

Course Objectives

- To understand basics of linguistics, probability and statistics
- To study statistical approaches to NLP and understand sequence labeling
- To outline different parsing techniques associated with NLP
- To explore semantics of words and semantic role labeling of sentences
- To understand discourse analysis, question answering and chatbots

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated

- conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
 - e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
 - m. Apply suitable algorithmic thinking and data management practices to design, develop, and evaluate effective solutions for real-life and research problems.

Course Outcomes (COs)

1. Understand basics of linguistics, probability and statistics associated with NLP
2. Implement a Part-of-Speech Tagger
3. Design and implement a sequence labeling problem for a given domain
4. Implement semantic processing tasks and simple document indexing and searching system using the concepts of NLP
5. Implement a simple chatbot using dialogue system concepts

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1		1									1		2	2
2		2									2		2	2
3		2									2		2	2
4		2									2		2	2
5		3									2		3	2

UNIT I **9 Hours**
INTRODUCTION

Natural Language Processing – Components - Basics of Linguistics and Probability and Statistics – Words-Tokenization-Morphology-Finite State Automata.

UNIT II **9 Hours**
STATISTICAL NLP AND SEQUENCE LABELING

N-grams and Language models –Smoothing -Text classification- Naïve Bayes classifier –Evaluation - Vector Semantics – TF-IDF - Word2Vec- Evaluating Vector Models –Sequence Labeling – Part of Speech – Part of Speech Tagging -Named Entities –Named Entity Tagging.

UNIT III **9 Hours**
CONTEXTUAL EMBEDDING

Constituency –Context Free Grammar –Lexicalized Grammars- CKY Parsing – Earley's algorithm Evaluating Parsers -Partial Parsing – Dependency Relations- Dependency Parsing –Transition Based - Graph Based.

UNIT IV **9 Hours**
COMPUTATIONAL SEMANTICS

Word Senses and WordNet – Word Sense Disambiguation – Semantic Role Labeling – Proposition Bank-
FrameNet- Selectional Restrictions - Information Extraction - Template Filling.

UNIT V

9 Hours

DISCOURSE ANALYSIS AND SPEECH PROCESSING

Discourse Coherence – Discourse Structure Parsing – Centering and Entity Based Coherence – Question Answering – Factoid Question Answering – Classical QA Models – Chatbots and Dialogue systems – Frame-based Dialogue Systems – Dialogue–State Architecture.

FOR FURTHER READING

Frame-based Dialogue Systems – Dialogue–State Architecture

Total: 45 Hours

COMPUTER VISION

3 0 0 3

Course Objectives

- To understand the fundamental concepts related to Image formation and processing
- To learn feature detection, matching and detection
- To become familiar with feature based alignment and motion estimation
- To develop skills on 3D reconstruction
- To understand image based rendering and recognition

Program Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- f. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- g. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- i. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- j. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- k. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- l. Recognize the need for, and have the preparation and ability to engage in independent and life- long learning in the broadest context of technological change.
- m. Apply suitable algorithmic thinking and data management practices to design, develop, and evaluate effective solutions for real-life and research problems.

Course Outcomes (COs)

1. To understand basic knowledge, theories and methods in image processing and computer vision.
2. To implement basic and some advanced image processing techniques in OpenCV.
3. To apply 2D a feature-based based image alignment, segmentation and motion estimations.
4. To apply 3D image reconstruction techniques
5. To design and develop innovative image processing and computer vision applications.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	3	1	1	1	1				2	1	3	2	2	
2	3	3	3	2	3		1		2	1	2	2	3	
3	3	3	2	2	3				1	1	2	2	3	
4	2	3	3	2	3				2	1	2	3	2	
5	2	3	3	2	2	2			2	1	2	3	3	

UNIT I

9 Hours

INTRODUCTION TO IMAGE FORMATION AND PROCESSING

Computer Vision - Geometric primitives and transformations - Photometric image formation – The digital camera - Point operators - Linear filtering - More neighborhood operators - Fourier transforms - Pyramids and wavelets - Geometric transformations - Global optimization.

UNIT II

8 Hours

FEATURE DETECTION, MATCHING AND SEGMENTATION

Points and patches - Edges - Lines - Segmentation - Active contours - Split and merge - Mean shift and mode finding - Normalized cuts - Graph cuts and energy-based methods.

UNIT III

10 Hours

FEATURE-BASED ALIGNMENT & MOTION ESTIMATION

2D and 3D feature-based alignment - Pose estimation - Geometric intrinsic calibration - Triangulation - Two-frame structure from motion - Factorization - Bundle adjustment - Constrained structure and motion - Translational alignment - Parametric motion - Spline-based motion - Optical flow - Layered motion.

UNIT IV

9 Hours

3D RECONSTRUCTION

Shape from X - Active range finding - Surface representations - Point-based representations Volumetric representations – Model-based reconstruction - Recovering texture maps and albedos.

UNIT V

9 Hours

IMAGE-BASED RENDERING AND RECOGNITION

View interpolation Layered depth images - Light fields and Lumigraphs - Environment mattes - Video- based Rendering-Object detection - Face recognition - Instance recognition - Category recognition - Context and scene understanding- Recognition databases and test sets.

Total: 45 Hours

4. Christopher M. Bishop; Pattern Recognition and Machine Learning, Springer, 2006.
5. E. R. Davies, Computer and Machine Vision, Fourth Edition, Academic Press, 2012.

Course Objectives

- To Construct the features of Object oriented programming
- To Recognize the need of the concepts inheritance, polymorphism and interface.
- To Develop Java applications using files, templates, exceptions and event handling.

Programme Outcomes (POs)

- Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- PSO1 Ability to demonstrate technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

Course Outcomes (COs)

1. Apply the concept of class and objects to solve simple problems.
2. Identify the importance of inheritance and interface concepts.
3. Analyze the importance of exception handling and learn the importance of string handling
4. Apply the concept of Multithreading in concurrent programming
5. Develop applications using collections framework for managing user defined types in Java

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	3	3	3	2	2							1	3	2
2	3	3	3	2	2							2	3	2
3	3	3	3	2	2							1	3	2
4	3	3	3	2	2							3	3	2
5	3	3	3	2	2							2	3	2

UNIT I**6 Hours****INTRODUCTION TO OOP AND JAVA**

Overview of OOP – Object oriented programming paradigms – Features of Object Oriented Programming – Java

Buzzwords – Overview of Java – Data Types, Variables and Arrays – Operators– Control Statements – Programming Structures in Java – Defining classes in Java – Constructors Methods -Access specifiers – Static members- Java Doc comments

UNIT II **6 Hours**

INHERITANCE, PACKAGES AND INTERFACES

Overloading Methods – Objects as Parameters – Returning Objects –Static, Nested and Inner Classes. Inheritance: Basics– Types of Inheritance -Super keyword -Method Overriding – Dynamic Method Dispatch –Abstract Classes – final with Inheritance. Packages and Interfaces: Packages – Packages and Member Access –Importing Packages – Interfaces.

UNIT III **6 Hours**

EXCEPTION HANDLING AND MULTITHREADING

Exception handling basics – Multiple catch Clauses – Nested try Statements – Java’s Built-in Exceptions – User defined Exception. Multithreaded Programming: Java Thread Model–Creating a Thread and Multiple Threads – Priorities – Synchronization – Inter Thread Communication- Suspending –Resuming, and Stopping Threads – Multithreading. Wrappers – Auto boxing.

UNIT IV **6 Hours**

I/O, GENERICS, STRING HANDLING

I/O Basics – Reading and Writing Console I/O – Reading and Writing Files. Generics: Generic Programming – Generic classes – Generic Methods – Bounded Types – Restrictions and Limitations. Strings: Basic String class, methods and String Buffer Class.

UNIT V **6 Hours**

JAVAFX EVENT HANDLING, CONTROLS AND COMPONENTS

JAVAFX Events and Controls: Event Basics – Handling Key and Mouse Events. Controls: Checkbox, Toggle Button – Radio Buttons – List View – Combo Box – Choice Box – Text Controls – Scroll Pane. Layouts – Flow Pane – HBox and VBox – Border Pane – StackPane – GridPane. Menus – Basics – Menu – Menu bars – Menu Item.

1 **5 Hours**
EXPERIMENT 1

Implementation of classes and objects with constructors and destructors

2 **5 Hours**
EXPERIMENT 2

Implementation of operator and function overloading

3 **5 Hours**
EXPERIMENT 3

Implementation of types of Inheritance

4 **5 Hours**
EXPERIMENT 4

Implementation of two different classes for adding a private data member using friend function

5 **5 Hours**
EXPERIMENT 5

Implementation of file handling operations

6

EXPERIMENT 6

Implementation of java event handling, controls and components

5 Hours

Total: 30+30=60 Hours

MODERN WEB APPLICATIONS

3 0 0 3

Course Objectives

- Study about the design of web pages using frames and scripting languages.
- Develop dynamic web pages using JavaScript, PHP and MySQL.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

f. The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Course Outcomes (COs)

1. Utilize the concept of the internet and World Wide Web.
2. Demonstrate the technologies used to create web pages.
3. Implement the FORM controls using PHP
4. Develop the web applications using PHP
5. Develop the web applications using MySQL and PHP

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2		3		2	2

3	2		3		2	2							2	2
4	2		3		3	3							2	2
5	2		3		3	3							2	2

UNIT I

9 Hours

INTRODUCTION TO INTERNET AND WORLD WIDE WEB

History of the Internet and World Wide Web, Web browsers, Web Servers, Uniform Resource Locator, Tools and web programming languages, Web standards, Categories of web applications, Tiered Architecture.

UNIT II

9 Hours

HTML AND CSS

Basic HTML page, Text Formatting, Table, Headers, Linking, Images, List, Meta Elements. CSS-Inline, Internal and External Style Sheet, Bootstrap-CSS Text, CSS forms, CSS components drop down.

UNIT III

9 Hours

JAVA SCRIPT AND XML

Introduction to Java Scripts, Objects in Java Script, Dynamic HTML with Java Script, Bootstrap-JS Alert, JS Button, JS popover. XML-Introduction, Structuring Data, Document Type Definition, XML Vocabularies, Document Object Model(DOM) with JavaScript, Extensible Stylesheet Language Transforms(XSL)

UNIT IV

9 Hours

PHP PROGRAMS

Creating PHP Programs, Numbers and Strings, Literals and Variables, Operators and Functions. FORM - Creating Form Controls, Using values returned from forms using PHP.

UNIT V

9 Hours

PHP DATABASE CONNECTIVITY

Connecting to MySQL Server, Selecting Databases, Checking for Errors, Closing the MySQL Server Connection. Manipulating data in MySQL using PHP - Inserting, Viewing, Updating and Deleting Records, Manipulating joined tables. User authentication - Creating Session, Authorization Level.

Total: 45 Hours

UI AND UX DESIGN

3 0 0 3

Course Objectives

- Study about designing web pages and understand the difference between UI and UX Design.
- To understand the concept of UX design and how it has evolved Able o to understand UX design process and methodology.
- Learning the Importance and scope of Interaction design, User centered design

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- m. Apply suitable algorithmic thinking and data management practices to design, develop, and evaluate effective solutions for real-life and research problems.
- n. Design and develop cost-effective solutions based on cutting-edge hardware and software tools and techniques to meet global requirements.

Course Outcomes

1. Understand to do user research, persona mapping, customer journey mapping
2. Design of interactive products Methods of interaction design Tools for interaction design
3. Design wireframes on paper and translate paper concepts into digital wireframes.
4. Apply and practice the techniques involved in designing digital wireframes using various UI elements.

5. Implement the process of conducting usability tests Learning steps for digital products.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	1												1	1
2	1	2	2		1								2	1
3		3	3		1								2	1
4		2	2										1	2
5		2	2										1	2

UNIT I

9 Hours

USER-CENTERED DESIGN PROCESS

Scripting Languages – HTML, CSS - Fundamentals of graphics design, principles of visual design - Overview of UI & UX Design - Overview of the UX Design Process - Difference between User Interface (UI) vs User Experience (UX) - Defining problem and vision statement - Persona creation – Primary and Secondary persona - Requirement definition - Creative ideation – brainstorming and ideation techniques - Scenarios and functionality extraction - Information Architecture - Task flows - Wireframe design

UNIT II

9 Hours

FUNDAMENTALS OF UI, HEURISTICS, AND INTERACTION DESIGN

Design Principles for UX and UI Design - UI Elements-Patterns - Material Design (Google) and Human Interface Design (Apple) guidelines - Interaction Principles & Interaction Behaviour - Master the Brand Platforms & Style Guides - comments and current UI patterns - Understand problems and design solutions for e-commerce, social media, message, data, and dashboard design

UNIT III

9 Hours

ELEMENTARY SKETCHING & WIREFRAMING

Principles of Sketching - Core Responsive Design - Wireframing vs Wireflows - Click through Wireframing Prototyping - Wireflow Creation - Work with different tools – Figma - Low-High Fidelity Design: Inclusive Design and Designing for Accessibility - Building High-Fidelity Mockups - Designing Efficiently with Tools - Interaction Patterns - Designing animations and interactions

UNIT IV

9 Hours

UNDERSTAND STYLE GUIDES, ELEMENTS, PROTOTYPING

Building a Design System – Style guides, color palette, fonts, grid, iconography, UI elements, photography or imagery, and illustration - Use of grids in UI design - Design animations and interaction patterns for key UI elements

UNIT V

9 Hours

USABILITY EVALUATION AND PRODUCT DESIGN

Type of usability evaluation – Qualitative & Quantitative evaluation - Guerilla testing , A/B Testing, Unmoderated remote usability testing, Card sorting, Session recording, think aloud - Think aloud – Introduction and advantages - Designing evaluation protocol - Conducting usability evaluation study - Conduct Usability Test explicit - Synthesize Test Findings - practices in corporate World - Product Design : Types of products & solutions - Design Psychology for e-commerce sites , CMS - Design Thinking Life Cycle

Total: 45 Hours

22CB010**WEB FRAMEWORKS****3 0 0 3****Course Objectives**

- Understand the architecture behind an Angular application and how to use it
- To understand the significance of using MongoDB as a database system
- To understand the role of React in designing front-end components
- Build a Web Server in Node and understand how it really works
- Develop a web application and API using web frameworks

Program Outcomes:

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation for the solution of complex engineering problems.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- i. Ability to Design and develop cost effective, secure, reliable IT, network and web based solutions with professional expertise in the domains including banking and healthcare and communications.

Course Outcomes:

1. Apply modules and components and Animations for creating Forms and developing web pages
2. Create web applications by performing CRUD operations in database using web frameworks
3. Design Progressive Web Application with dynamic HTML web pages using Angular.
4. Designing single page applications with reusable UI components using React CSS and SaaS
5. Use Node Package Manager and Node packages for Server Side programming.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	1		2		2				2	2			2	
2	1		1		3				2	2			3	
3	1		2		2				2	2			3	
4	1		1		3				2	2			2	
5	1		1		3				1	1			2	

UNIT I

9 Hours

ANGULAR FRONT-END FRAMEWORK

Introduction - Setup - Architecture: Modules, Components, Services and DI fundamentals - Components and Templates – Configuration- Forms - Observables & RxJS - Boot Strapping - Ng Modules - Dependency Injection - Http Client - Routing and Navigation – Animations

UNIT II

9 Hours

FRAMEWORKS WITH DATABASES

MongoDB - MongoDB Basics - Documents - Collections - Query Language - Installation - The mongo Shell - Schema Initialization - MongoDB Node.js Driver - Reading from MongoDB - Writing to MongoDB - CRUD operations - projections - Indexing - Aggregation - Replication - Sharding - Creating backup – Deployment

UNIT III

9 Hours

ANGULAR TECHNIQUES

Service workers & PWA - Server side rendering - Angular Libraries - Schematics - CLI Builders - Angular Ivy - Web Workers

UNIT IV

9 Hours

REACT

React Introduction - React ES6 - React Render HTML - React JSX - Components -React Classes - Composing Components - Passing Data - Dynamic Composition - React state - setting State - Async State Initialization - Event Handling Communicating from Child to Parent - Stateless Components - Designing components- React Forms - React CSS - React SaaS

UNIT V

9 Hours

NODE JS BACK-END FRAMEWORK

Node.js basics - Local and Export Modules - Node Package Manager - Node.js web server - Node.js File system - Node Inspector - Node.js EventEmitter - Frameworks for Node.js - Express.js Web App - Serving static Resource - Node.js Data Access

Total: 45 Hours

21CB011

APP DEVELOPMENT

2023

Course Objectives

- To facilitate students to understand android SDK
- To help students to gain a basic understanding of Android application development
- To inculcate working knowledge of Android Studio development tool

Programme Outcomes (POs)

- a. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- m. Design and develop cost effective, secure, reliable IT, network and web based solutions with professional expertise in the domains including banking and healthcare and communications.

Course Outcomes (COs)

1. Identify fundamental concepts of mobile programming that make it unique from programming for other platforms
2. Analyze the essential of Android Application with their anatomy and terminologies
3. Apply rapid prototyping techniques to design, develop and deploy the Android Applications
4. Analyze the essentials of User Interface Design in IOS with SQLite Database
5. Design the flutter applications on the Android marketplace for distribution

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2		1		3								1	
2	1	2	2		3								2	
3	1		2		3								2	

4	1	1	2		3								3	
5	1	2	2		3								3	

UNIT I 5 Hours

INTRODUCTION TO ANDROID

The Android Platform - Android SDK - Eclipse Installation - Android Installation - building your First Android application - Understanding the Android Manifest file

UNIT II 6 Hours

ANDROID APPLICATION DESIGN ESSENTIALS

Anatomy of Android applications - Android terminologies - Application Context - Activities - Services - Intents - Receiving and Broadcasting Intents - Using Intent Filter - Permissions

UNIT III 6 Hours

COMMON ANDROID APIS

Testing Android applications - Publishing Android applications - Using Android Data and Storage APIs - managing data using SQLite - Using Android Web APIs - Using Android Telephony APIs - Deploying Android Applications to the World

UNIT IV 6 Hours

IOS USER INTERFACE DESIGN ESSENTIALS

IOS features - UI implementation - Touch frameworks - Data persistence using Core Data and SQLite - Integrating calendar and address book with social media application - Using WIFI - iPhone marketplace

UNIT V 7 Hours

APP DEVELOPMENT WITH FLUTTER

Flutter Introduction - Create First Flutter Application - Exploring commonly used flutter widgets: Container - Margin - Padding and Box Constraints - Custom Fonts - Column and Expanded Widgets - Image Asset - Raised Button - and Alert Dialog

1 4 Hours

EXPERIMENT 1

Develop a simple application with one EditText so that the user can write some text in it. Create a button called "Convert Text to Speech" that converts the user input text into voice

2 4 Hours

EXPERIMENT 2

Create an application to design a Visiting Card. The Visiting card should have a company logo at the top right corner. The company name should be displayed in Capital letters, aligned to the center. Information like the name of the employee, job title, phone number, address, email, fax and the website address is to be displayed. Insert a horizontal line between the job title and the phone number

3

5 Hours

EXPERIMENT 3

Create a SIGNUp activity with Username and Password. Validation of password should happen based on the following rules:

Password should contain uppercase and lowercase letters.

Password should contain letters and numbers.

Password should contain special characters.

Minimum length of the password (the default value is 8).

On successful SIGN UP proceed to the next Login activity. Here the user should SIGN IN using the Username and Password created during signup activity. If the Username and Password are matched then navigate to the next activity which displays a message saying "Successful Login" or else display a toast message saying "Login Failed". The user is given only two attempts and after that display a toast message saying "Failed Login Attempts" and disable the SIGN IN button. Use Bundle to transfer information from one activity to another

4

4 Hours

EXPERIMENT 4

Write a program to enter Medicine Name, Date and Time of the Day as input from the user and store it in the SQLite database. Input for Time of the Day should be either Morning or Afternoon or Evening or Night. Trigger an alarm based on the Date and Time of the Day and display the Medicine Name

5

5 Hours

EXPERIMENT 5

Develop an application to set an image as wallpaper. On click of a button, the wallpaper image should start to change randomly every 30 seconds

6

4 Hours

EXPERIMENT 6

Create an activity like a phone dialer with CALL and SAVE buttons. On pressing the CALL button, it must call the phone number and on pressing the SAVE button it must save the number to the phone contacts

7

4 Hours

EXPERIMENT 7

Implement UI elements like TextFields, Label, Toolbar, Statusbar, Tabbar

Total: 30+30 =60 Hours

21CB012

SOFTWARE TESTING AND AUTOMATION

3 0 0 3

Course Objectives

- Understand the importance of software testing in the software development process
- Analyze different testing methodologies and techniques to create test plans, test cases, and test scripts
- Apply automation testing tools and frameworks to design and implement automated test suites

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PSO1: Design and develop cost effective, secure, reliable IT, network and web based solutions with professional expertise in the domains including banking and healthcare and communications.

Course Outcomes (COs)

1. Understand the importance of testing in the software development process
2. Compare the different test case design strategies
3. Analyze the different levels of testing and their importance
4. Apply test management techniques and the role of a test specialist
5. Analyze the software test automation and its requirements

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
--------------	------------	------------	------------	------------	------------	------------	------------	------------	------------	-------------	-------------	-------------	-------------	-------------

1	3	2	1		1								1	
2	2	3	2		2								1	
3	2	2	2		2								1	
4	2	3	2		3								1	
5	3	2	1		3								2	

UNIT I

9 Hours

INTRODUCTION

Basic definitions – Software Testing Principles – The Tester’s Role in a Software Development Organization – Origins of Defects – Cost of Defects – Defect Classes – The Defect Repository and Test Design – Defect Examples- Developer/Tester Support of Developing a Defect Repository.

UNIT II

9 Hours

TEST CASE DESIGN STRATEGIES

Test Scenarios - Test Cases - Test case Design Strategies - Black Box Approach to Test Case Design - Using White Box Approach to Test design – Test Adequacy Criteria – Static testing vs. Structural testing – Code functional testing – Coverage and Control Flow Graphs – Covering Code Logic – Paths – Code complexity testing – Additional White box testing approaches - Test Coverage

UNIT III

9 Hours

LEVELS OF TESTING

Types of testing - manual and automation - Introduction to testing methods - White-box, Black- box and Grey-box - Functional testing - Non-functional testing - Introduction to levels of testing – Unit Testing, Integration Testing, System Testing, User Acceptance Testing - Introduction to types of testing – Regression Testing, Smoke Testing, Database Testing, Usability Testing, Load Testing, Stress Testing, Performance Testing, Compatibility Testing, Security Testing, Internationalization Testing, Localization Testing

UNIT IV

9 Hours

TEST MANAGEMENT

People and organizational issues in testing – Organization structures for testing teams – testing services – Test Planning – Test Plan Components – Test Plan Attachments – Locating Test Items - test management – test process – Reporting Test Results – Introducing the test specialist – Skills needed by a test specialist – Building a Testing Group- The Structure of Testing Group - The Technical Training Program.

UNIT V

9 Hours

TEST AUTOMATION

Software test automation – Design and Architecture for Automation - Automation testing - Automation Tools - Selenium Web Driver - Create Selenese Commands - TestNG - TestNG Annotations - Jmeter - Assertions in JMeter - Junit

Total: 45 Hours

21CB013

DEVOPS

2023

Course Objectives

- To introduce DevOps terminology, definition & concepts
- To understand the different Version control tools like Git, Mercurial
- To understand the concepts of Continuous Integration/ Continuous Testing/ Continuous Deployment)
- To understand Configuration management using Ansible
- Illustrate the benefits and drive the adoption of cloud-based DevOps tools to solve real-world problems

Programme Outcomes (POs):

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitation

PSO1: Design and develop cost effective, secure, reliable IT, network and web based solutions with professional expertise in the domains including banking and healthcare and communications.

Course Outcomes:

1. Understand different actions performed through Version control tools like Git.
2. Perform Continuous Integration and Continuous Testing and Continuous Deployment using Jenkins by building and automating test cases using Maven & Gradle.
3. Ability to Perform Automated Continuous Deployment.
4. Ability to do configuration management using Ansible.

- Understand how to leverage Cloud-based DevOps tools using Azure DevOps.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2	1	1	2	2								3	
2	3	3	3	3	2								2	
3	2	2	2	3	2								2	
4	2	2	2	2	2								2	
5	2	2	2	2	2								3	

UNIT I **7 Hours**

INTRODUCTION TO DEVOPS

Devops Essentials - Introduction to AWS, GCP, Azure - Version control systems: Git and GitHub.

UNIT II **10 Hours**

COMPILE AND BUILD USING MAVEN & GRADLE

Introduction, Installation of Maven, POM files, Maven Build lifecycle, Build phases (compile build, test, package) Maven Profiles-Maven repositories (local, central, global)- Maven plugins- Maven create and build Artifacts- Dependency Management-Installation of Gradle- understanding build using Gradle.

UNIT III **12 Hours**

CONTINUOUS INTEGRATION USING JENKINS

Install & Configure Jenkins- Jenkins Architecture Overview- creating a Jenkins Job- Configuring a Jenkins job- Introduction to Plugins- Adding Plugins to Jenkins-commonly used plugins (Git Plugin, Parameter Plugin-HTML Publisher- Copy Artifact, and Extended choice parameters). Configuring Jenkins to work with Java- Git- and Maven- Creating a Jenkins Build and Jenkins workspace.

UNIT IV **9 Hours**

CONFIGURATION MANAGEMENT USING ANSIBLE

Ansible Introduction- Installation- Ansible master/slave configuration- YAML basics- Ansible - Modules - Ansible Inventory files- Ansible playbooks- Ansible Roles- and ad-hoc commands in Ansible

UNIT V **7 Hours**

BUILDING DevOps PIPELINES USING AZURE

Create GitHub Account, Create Repository- Create Azure Organization- Create a new pipeline- Build a sample code- Modify azure-pipelines- yaml file

Total: 45 Hours

21CB014**CLOUD, MICROSERVICES AND APPLICATIONS****3 0 0 3****Course Objectives**

- Acquire knowledge of cloud operation and services, security techniques provided by cloud computing.
- Understand the concepts of cloud native applications with micro services.
- Familiar with the cloud monitoring and security operation tools.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Understanding the concept of guiding principle, utilization of cloud and pricing options of cloud.
2. Analyze the techniques help to do operation with cloud applications
3. Deploy the functions of cloud with the help of cloud application and its services.

4. Analyze the devops fundamental techniques and tools used for devops operation.
5. Apply the cloud monitoring and network monitoring tools.

Articulation Matrix

4		2	2											3
5		3	3		2									2

UNIT I 10 Hours

CLOUD FUNDAMENTALS

Cloud Fundamentals- Cloud Service Components, Cloud service and Deployment Models - Cloud components Guiding Principle with respect to utilization, Security, Pricing and the applications of Cloud

UNIT II 10 Hours

APPLICATION ARCHITECTURE

Public Cloud Platforms overview and their usage -Application architectures-Monolithic and Distributed, Micro service fundamental and design approach, Cloud Native applications-12 Factors App. Application integration process, API Fundamental.

UNIT III 9 Hours

CLOUD MICROSERVICES

Micro service, API management, spring boot Fundamental and design of micro service, API tools-. Developer Portal - Applications of Micro service and APIFICATION

UNIT IV 9 Hours

DEVOPS FUNDAMENTALS

Devops fundamentals: Tools and Applications Containerization Process and application - DevOps Tools and their usage in cloud application development, Docker and Containerization Process

UNIT V 7 Hours

CLOUD SECURITY AND MONITORING TOOLS

Cloud Security and Monitoring Tools.

Total: 45 Hours

21CB015

INTERNET OF THINGS

3 0 0 3

Course Objectives

- To understand the components and protocols used in IoT
- To understand the IoT reference Architecture
- Ability to understand the various applications of IoT in real-time

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Course Outcomes (COs)

1. Apply the fundamental building blocks and use cases of IoT Applications
2. Apply the concept of Reference Architecture in IoT Applications
3. Utilize the sensors for monitor and control the IoT system applications
4. Analyze the networking and communication protocols used in IoT
5. Analyze the data processing and storage in IoT

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2	1	1		2								3

3	2	2	2		2								2	

4	2	2	2		2								2	
5	2	2	2		2								3	

UNIT I **9 Hours**

INTRODUCTION TO IOT AND USE CASES

Understanding basic concepts of IoT, Consumer IoT vs Industrial Internet, Fundamental building blocks, Use Cases of IoT in various industry domains.

UNIT II **9 Hours**

ARCHITECTURE

IoT reference architectures, Industrial Internet Reference Architecture, Edge Computing, IoT Gateways, Data Ingestion, and Data Processing Pipelines, Data Stream Processing.

UNIT III **9 Hours**

SENSORS AND INDUSTRIAL SYSTEMS

Introduction to sensors and transducers, integrating sensors to sensor processing boards, introduction to industrial data acquisition systems, industrial control systems, and their functions.

UNIT IV **9 Hours**

NETWORKING AND COMMUNICATION FOR IOT

Recap of OSI 7-layer architecture and mapping to IoT architecture, Introduction to proximity networking technologies (ZigBee, Bluetooth, Serial Communication), Industrial network protocols (Modbus, CAN bus), Communicating with cloud applications (web services, REST, TCP/IP, and UDP/IP sockets, MQTT, Web Sockets, protocols. Message encoding (JSON, Protocol Buffers).

UNIT V **9 Hours**

IOT DATA PROCESSING AND STORAGE

Time Series Data and their characteristics, time-series databases, basic time-series analytics, data summarization, and sketching, dealing with noisy and missing data, anomaly, and outlier detection.

Total: 45 Hours

Reference(s)

22CB016

VIRTUALIZATION IN CLOUD COMPUTING

3 0 0 3

Course Objectives

- Analyze the basic concepts of virtualization technology to derive the best practice model for deploying cloud based applications
- Create an application by utilizing cloud platforms such as Amazon Web Services and Windows Azure
- Identify major security and privacy problems in cloud computing environment
- Apply the ability to use the architecture of cloud, service and delivery models
- Implement the key enabling technologies that help in the development of cloud.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- m. Demonstrate the knowledge and technical skills in software development.
- n. Develop practical competencies in Software and Hardware Design.

Course Outcomes (COs)

1. Analyze the concept of virtualization and its properties.
2. Apply different forms of virtualization.
3. Implement various architectures for implementing virtualization methods.
4. Create virtual machines and installing various operating systems.
5. Evaluate the performance of the virtual machines and deployed applications.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	1		2	3									1	
2			1	3	2									1
3			2	1	3									2
4	1		2	1	3									2
5	1		3		2									2

UNIT I

9 Hours

UNDERSTANDING VIRTUALIZATION

Describing Virtualization-Microsoft Windows Drives Server Growth -Explaining Moore's Law-Understanding the Importance of Virtualization -Examining Today's Trends -Virtualization and Cloud Computing -Understanding Virtualization Software Operation -Virtualizing Servers -Virtualizing Desktops -Virtualizing Applications.

UNIT II

9 Hours

HYPERVISORS

Describing a Hypervisor -Exploring the History of Hypervisors -Understanding Type 1 Hypervisors - Type 2 Hypervisors - Role of a Hypervisor -Holodecks and Traffic Cops -Resource Allocation -Comparing Today's Hypervisors -VMware ESX -Citrix Xen -Microsoft Hyper-V -Other Solutions.

UNIT III

9 Hours

VIRTUALIZATION

Introduction to Virtual Machine - CPUs in a Virtual Machine -Memory in a Virtual Machine -Network Resources in a Virtual Machine - Storage in a Virtual Machine -Understanding How a Virtual Machine Works -Working with Virtual Machines -Virtual Machine Clones -Templates -Snapshots -OVF -Containers

UNIT IV

9 Hours

CREATION OF VIRTUAL MACHINES & CONFIGURATIONS

Understanding Configuration Options-Installing Windows on a Virtual Machine- Installing Linux on a Virtual Machine-Installing VirtualBox Guest Additions- Managing CPUs for a Virtual Machine- Configuring VM CPU Options-Managing Storage for a Virtual Machine- Managing Networking for a Virtual Machine- Copying a Virtual Machine- Managing Additional Devices in Virtual Machines

UNIT V

9 Hours

AVAILABILITY & APPLICATIONS IN A VIRTUAL MACHINE

Increasing Availability-Protecting a Virtual Machine-Protecting Multiple Virtual Machines-Protecting Data Centers - Examining Virtual Infrastructure Performance Capabilities -Deploying Applications in a Virtual Environment-Understanding Virtual Appliances and vApps -Open Stack and Containers.

Total: 45 Hours

CLOUD STORAGE TECHNOLOGIES

3 0 0 3

Course Objectives

- Characterize the functionalities of logical and physical components of storage
- Describe various storage networking technologies
- Identify different storage virtualization technologies
- Discuss the different backup and recovery strategies

- Understand common storage management activities and solutions

Programme Outcomes (POs)

- Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- Demonstrate the knowledge and technical skills in software development.
- Develop practical competencies in Software and Hardware Design.

Course Outcomes (Cos)

- Analyze the fundamentals of information storage management and various models of Cloud infrastructure services and deployment.
- Apply the usage of advanced intelligent storage systems and RAID.
- Evaluate various storage networking architectures - SAN, including storage subsystems and virtualization.
- Execute the different roles in providing disaster recovery and remote replication technologies.
- Implement the security needs and security measures to be employed in information storage management.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	1	2	1	3	3								2	
2	3	1	2	3	3									1
3	1	1	3	2	2									2
4	3	2	1	2	2									1
5	1	3	2	1	2									2

UNIT I

8 Hours

STORAGE SYSTEMS

Cloud Storage Fundamentals and Architecture - Cloud Storage Providers and Services - Access methods (RESTful APIs, SDKs) for cloud object storage - Block storage technologies in cloud environments - File Storage in the Cloud: Network File System (NFS) and Server Message Block (SMB) protocols -Hybrid Cloud Storage - Data Migration - Data Lifecycle Management in the Cloud

UNIT II

9 Hours

INTELLIGENT STORAGE SYSTEMS AND RAID

Storage Tiering and Caching - Automated Data Placement and Load Balancing: Intelligent Algorithms for Data

Placement, Load Balancing Strategies for Distributed Storage Systems, Dynamic Resource Allocation - RAID Technologies in Cloud Storage: RAID Levels - Data Striping, Mirroring, and Parity for Fault Tolerance - RAID Configuration and Performance Optimization

UNIT III

10 Hours

STORAGE NETWORKING TECHNOLOGIES AND VIRTUALIZATION

Storage Networking in Cloud Environments - Understanding storage protocols - Network-attached storage (NAS) vs. storage area network (SAN) - Storage virtualization techniques and technologies - Network-Attached Storage (NAS) - Storage Area Network (SAN) - iSCSI and Fiber Channel over IP (FCIP) in Cloud Storage - Network Virtualization and Overlay Networks - Storage Virtualization and Abstraction - Network Performance Optimization - Network Security in Cloud Storage

UNIT IV

9 Hours

BACKUP, ARCHIVE AND REPLICATION

Cloud Backup: Strategies and Architecture, Data Deduplication and Compression, Security - Cloud Archive: Strategies and Architecture, Replication for Data Redundancy: Synchronous and asynchronous replication methods - Disaster Recovery in the Cloud - Hybrid Backup and Archiving in Cloud Environments - Backup and Archive Management in Cloud Environments

UNIT V

9 Hours

SECURING STORAGE INFRASTRUCTURE

Storage Security Fundamentals: Key Security Principles, Threats and Vulnerabilities in Storage Infrastructure, Access Control and Authentication: Role-based Access Control (RBAC) and Permissions Management, Multi-factor authentication (MFA) for Storage Systems - Storage-level Encryption and Application-level Encryption - Storage infrastructure Management Functions and Processes.

Total: 45 Hours

5. Toby Velte, Anthony Velte, Robert Elsenpeter, "Cloud Computing - A Practical Approach", Tata Mcgraw Hill, 2009.

Course Objectives

- To learn the options for running automation tools, and load balancers in the cloud-native applications.
- To learn the configuration management in the cloud.
- To know why cloud automation is important.
- To learn what types of cloud automation tools can be used.
- To learn load balancing and auto scaling in the cloud.

Programme Outcomes (POs)

- Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- Demonstrate the knowledge and technical skills in software development.
- Develop practical competencies in Software and Hardware Design.

Course Outcomes (COs)

1. Implement cloud native applications on AWS, Terraform etc.
2. Apply VM provisioning and migration in the cloud.
3. Analyze cloud automation and configuration.
4. Apply balance load and auto scaling in the cloud.
5. Analyze the AWS cloud formation use-case.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2		2	1	3									2
2		2			3									1
3			3	2	3									2
4			2		3								2	
5			2		3									2

UNIT I**7 Hours**

UNDERSTANDING THE CLOUD AUTOMATION

Introduction to Automation & Configuration Tools. Introduction to Terraform. Understanding Terraform Vs CloudFormation. Deploying & Destroying AWS environment with Terraform. Introduction to Packer.

UNIT II

9 Hours

ABSTRACTION AND VIRTUALIZATION

Introduction to Virtualization Technologies, Load Balancing and Virtualization, Understanding hypervisors Porting Applications, Virtual Machines Provisioning and Manageability, Virtual Machine Migration Services, Virtual Machine Provisioning and Migration in Action, Provisioning in the Cloud Context, Virtualization of CPU, Memory, I/O Devices, Virtual Clusters and Resource management, Virtualization for Data Centre Automation.

UNIT III

9 Hours

AUTOMATION AND CONFIGURATION MANAGEMENT IN THE CLOUD

Cloud automation at scale, Cloud Configuration Management –unmanaged and managed configuration management, Modification of the capacity of the service, horizontal and vertical scaling, and automatic versus manual scaling. Migrating the business to Cloud. Automating cloud deployments –Balancers.

UNIT IV

9 Hours

LOAD BALANCING AND AUTO SCALING IN CLOUD

Managed instance groups, Auto scaling and health check, Overview of HTTP(S) load balancing. Example: HTTP load balancer, HTTP(S) load balancing, Configuring an HTTP Load Balancer with Auto scaling, SSL proxy load balancing, TCP proxy load balancing, Network load balancing, Internal load balancing, Configuring an Internal Load Balancer, Choosing a load balancer.

UNIT V

11 Hours

AWS CLOUD FORMATION USE-CASE

Introduction to AWS CloudFormation, AWS CloudFormation Features and Components, Working of AWS CloudFormation, setting up AWS CloudFormation, building a Pipeline for Test and Production Stacks, AWS CloudFormation Artifacts, Parameter Override Functions with Code Pipeline, Using AWS CLI. AWS CloudFormation, Terraform, VMware vs Center Configuration Manager (VCM), and Puppet.

Total: 45 Hours

SOFTWARE DEFINED NETWORKS

2 0 2 3

Course Objectives

- To understand the need for SDN and its data plane operations
- To understand the functions of control plane
- To comprehend the migration of networking functions to SDN environment
- To explore various techniques of network function virtualization
- To comprehend the concepts behind network virtualization

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- m. Demonstrate the knowledge and technical skills in software development.

Course Outcomes(COs)

1. Apply the motivation behind SDN
2. Analyze the functions of the data plane and control plane
3. Evaluate and develop network applications using SDN
4. Execute network services using NFV
5. Implement various use cases of SDN and NFV

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

3	2	2	2	3	3									
4	2	2	2	3	1									
5	3	3	1	1	3								2	

UNIT I 6 Hours

SDN: INTRODUCTION

History of Software Defined Networking (SDN) – Modern Data Center – Traditional Switch Architecture – Why SDN – Evolution of SDN – How SDN Works – Centralized and Distributed Control and Data Planes.

UNIT II 6 Hours

SDN DATA PLANE AND CONTROL PLANE

Data Plane functions and protocols - OpenFlow Protocol - Packet Processing and Performance Optimization – Flow Table - Control Plane Functions - Southbound Interface, Northbound Interface – SDN Controllers - Ryu, OpenDaylight, ONOS - Distributed Controllers.

UNIT III 6 Hours

SDN APPLICATIONS

SDN Application Plane Architecture – Network Services Abstraction Layer – Traffic Engineering – Measurement and Monitoring – Security – Data Center Networking – Wide Area Networks (WAN) – Service Provider Networks – Internet Service Providers (ISPs).

UNIT IV 6 Hours

NETWORK FUNCTION VIRTUALIZATION

Network Virtualization - NFV Architecture – Virtual LANs – OpenFlow VLAN Support – NFV Standards and Frameworks – NFV Concepts – Benefits and Requirements – Reference Architecture.

UNIT V 6 Hours

NFV FUNCTIONALITY

NFV Infrastructure – Virtualized Network Functions – NFV Management and Orchestration – NFV Use Cases: Virtual Customer Premises Equipment, Virtual Evolved Packet Core, Virtualized Network Monitoring and Traffic Analysis, Network Slicing, Edge Computing and NFV.

1 5 Hours

EXPERIMENT 1

- Setup your own virtual SDN lab
- i) Virtualbox/Mininet Environment for SDN - <http://mininet.org>
- ii) <https://www.kathara.org>
- iii) GNS3

2 6 Hours

EXPERIMENT 2

Create a simple mininet topology with SDN controller and use Wireshark to capture and visualize the OpenFlow messages such as OpenFlow FLOW MOD, PACKET IN, PACKET OUT etc.

3

6 Hours

EXPERIMENT 3

Create a SDN application that uses the Northbound API to program flow table rules on the switch for various use cases like L2 learning switch, Traffic Engineering, Firewall etc.

4

6 Hours

EXPERIMENT 4

Create a simple end-to-end network service with two VNFs using vim-emu <https://github.com/containernet/vim-emu>

5

6 Hours

EXPERIMENT 5

Install OSM and onboard and orchestrate network service.

Total: 30+30 =60 Hours

22CB020

SECURITY AND PRIVACY IN CLOUD

3 0 0 3

Course Objectives

- To Introduce Cloud Computing terminology, definition & concepts
- To understand the security design and architectural considerations for Cloud
- To understand the Identity, Access control in Cloud
- To follow best practices for Cloud security using various design patterns
- To be able to monitor and audit cloud applications for security

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety,

and the cultural, societal, and environmental considerations.

d. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

m. Demonstrate the knowledge and technical skills in software development.

n. Develop practical competencies in Software and Hardware Design.

Course Outcomes (COs)

1. Understand the cloud security concepts and fundamentals.
2. Explain the security challenges in the cloud.
3. Analyze the cloud policy, identity and Access Management.
4. Delivers various risks, audit and monitoring mechanisms in the cloud.
5. Applying the various architectural and design considerations for security in the cloud.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	1	3	2	3	1									
3	3	2	2	3	2								1	
4	2	1	2	3	3									
5	1	3	3	1	1									3

UNIT I

8 Hours

FUNDAMENTALS OF CLOUD SECURITY CONCEPTS

Overview of Cloud Security- Security Services - Confidentiality, Integrity, Authentication, Non- repudiation, Access Control - Basic of Cryptography - Conventional and Public-key cryptography, Hash Functions, Authentication and Digital Signatures.

UNIT II

11 Hours

SECURITY DESIGN AND ARCHITECTURE FOR CLOUD

Security Design Principles for Cloud Computing - Comprehensive Data Protection - End-to-end access control - Common Attack Vectors and threats - Network and Storage - Secure Isolation Strategies - Virtualization strategies - Inter-tenant network segmentation strategies - Data Protection strategies: Data Redaction, Tokenization, Obfuscation, PKI and Key

UNIT III

9 Hours

ACCESS CONTROL AND IDENTITY MANAGEMENT

Access Control Requirements for Cloud infrastructure - User Identification - Authentication and Authorization - Roles-based Access Control - Multi-factor authentication - Single Sign-on, Identity Federation - Identity providers and service consumers - Storage and network access control options - OS Hardening and minimization – Verified and measured boot - Intruder Detection

UNIT IV

8 Hours

CLOUD SECURITY DESIGN PATTERNS

Introduction to Design Patterns, Cloud Bursting, Geo-tagging, Secure Cloud Interfaces, Cloud Resource Access Control, Secure On-Premise Internet Access, Secure External Cloud

UNIT V

9 Hours

MONITORING, AUDITING AND MANAGEMENT

Proactive Activity Monitoring – Incident Response, Monitoring for Unauthorized Access, Malicious Traffic, Abuse of System Privileges – Events and Alerts – Auditing – Record generation, Reporting and Management, Tamper-Proofing Audit logs, Quality of Services, Secure Management, User Management, Identity Management, Security Information and Event Management

Total: 45 Hours

5. Raj Kumar Buyya, James Broberg, Andrzej Goscinski, Cloud Computing, Wiley 2013.

Course Objectives

- Define machine learning and problems relevant to machine learning.
- Differentiate supervised, unsupervised and reinforcement learning.
- Apply neural networks, Bayes classifier and k nearest neighbor, for problems appear in machine learning
- Perform statistical analysis of machine learning techniques.

Programme Outcomes (POs)

- Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

Course Outcomes (COs)

1. Interpret the machine learning models and relationship between ML and human learning.
2. Identify the problems for machine learning. And select the either supervised, unsupervised or reinforcement learning.
3. Analyze the various applications of Markov Models and Hidden Markov Models.
4. Apply the various methods using regression techniques
5. Apply the minimum spanning tree clustering and K-nearest neighbors clustering, for problems appear in machine learning.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	1	2	1	2	1	2							1	
3	1	2	1	2	1	2								
4	2	1	1	2										
5	1	2	1	2										

UNIT I **9 Hours**

INTRODUCTION TO MACHINE LEARNING (ML)

Relationship between ML and human learning-A quick survey of major models of how machines learn, Example applications of ML.

UNIT II **9 Hours**

CLASSIFICATION

Supervised Learning-The problem of classification, Feature engineering, Training and testing classifier models, Cross-validation, Model evaluation (precision, recall, F1-measure, accuracy, area under curve), Statistical decision theory including discriminant functions and decision surfaces, Naive Bayes classification, Bayesian networks, Decision Tree and Random Forests; k-Nearest neighbor classification, Support Vector Machines, Artificial neural networks including backpropagation, Applications of classifications, Ensembles of classifiers including bagging and boosting.

UNIT III **9 Hours**

HIDDEN MARKOV MODELS

Hidden Markov Models (HMM) with forward-backward and Viterbi algorithms, Sequence classification using HMM, Conditional random fields, Applications of sequence classification such as part-of-speech tagging.

UNIT IV **9 Hours**

REGRESSION

Multi-variable regression, Model evaluation, Least squares regression, Regularization, LASSO, Applications of regression, Association rule mining algorithms including apriori, Expectation-Maximization (EM) algorithm for unsupervised learning

UNIT V **9 Hours**

CLUSTERING

average linkage-Wards algorithm, Minimum spanning tree clustering, K-nearest neighbors clustering, BIRCH, CURE, DBSCAN, Anomaly and outlier detection methods.

Total: 45 Hours

ROBOTIC PROCESS AUTOMATION

3 0 0 3

Course Objectives

- Understand the basic concepts, methodologies and tools in RPA.
- Implement the exception handling and automation techniques using RPA.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

e. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

m. Ability to design and develop Artificial Intelligence algorithms, tools and techniques for solving real world problems.

Course Outcomes (COs)

1. Interpret the basic concepts and methodologies in RPA.
2. Infer the UiPath building blocks in the RPA.
3. Apply the RPA techniques to automate the application.
4. Implement the exception handling and BOT in RPA.
5. Implement the RPA to solve real time problems.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

3	2	2	3		3								3	
4	2	3	3		3								3	
5	2	3	3		3								3	

UNIT I 9 Hours

RPA AND PROCESS METHODOLOGIES

Introduction to RPA Definition importance and benefits of RPA Comparison of RPA with BPO BPM and BPA Understanding RPA Skills On Premise Vs the Cloud Lean and Six Sigma Methodologies for Process Improvement Overview of Agile Methodologies and its importance in RPA

UNIT II 9 Hours

UIPATH ESSENTIALS

Introduction to UiPath Installation and activation UiPath Activities Flowcharts Sequences and Data Manipulation UiPath Variables and Data Types-Debugging techniques in UiPath Overview of UiPath Orchestrator BOT Development and Management UiPath Automation Best Practices

UNIT III 9 Hours

ADVANCED RPA TECHNIQUES

Data Manipulation Collections and Data Table Usage File Operations CSV/Excel to data table and vice versa Working with UiExplorer and Desktop Automation Web Automation Basic and Desktop Recording-Advanced Screen Scraping Techniques Data Scraping and Extraction from Websites

UNIT IV 9 Hours

HANDLING EXCEPTIONS AND USER EVENTS

Exception Handling Techniques: Try-Catch, Re-throwing Exceptions, and Custom Exception Handling- Logging, Debugging, and Error Reporting Techniques- Handling User Events: Assistantbots, System Event Triggers, and Image and Element Triggers-Monitoring Techniques in RPA-Launching an Assistant bot on a Keyboard Event

UNIT V

9 Hours

DEPLOYMENT AND MAINTENANCE OF BOT

Overview of Orchestration Server and its functionalities Orchestrator to Control Bots and Deploy Bots- Uploading Packages, Managing Packages, and Deleting Packages-Publishing and Managing Updates- Continuous Integration and Continuous Deployment (CI/CD) in RPA

Total: 45 Hours

CRYPTOCURRENCY AND BLOCKCHAIN TECHNOLOGIES

2023

Course Objectives

- To understand the basics of Blockchain Technology.
- To learn Different protocols and consensus algorithms in Blockchain.
- To learn the Blockchain implementation frameworks.
- To experiment the Hyperledger Fabric, Ethereum networks.
- To understand the Blockchain Applications.

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

- d. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- PSO1: Design and develop cost effective, secure, reliable IT, network and web based solutions with professional expertise in the domains including banking and healthcare and communications.

Course Outcomes (COs)

1. Understand emerging abstract models for Blockchain Technology.
2. Identify major research challenges and technical gaps existing between theory and practice in the crypto currency domain.
3. Develop conceptual understanding of the function of Blockchain as a method of securing distributed ledgers, how consensus on their contents is achieved, and the new applications that they enable.
4. Apply hyperledger Fabric and Ethereum platform to implement the Block chain Application.
5. Analyze the real life applications of Blockchain Technologies.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	1	2	2	2	1								1	
2	3	3	3	1	2								2	
3	2	2	1	1										
4		2	2		3								2	
5	1	2	3	1	2								1	

UNIT I 7 Hours

INTRODUCTION TO BLOCKCHAIN

Blockchain- Public Ledgers, Blockchain as Public Ledgers - Block in a Blockchain, Transactions - The Chain and the Longest Chain - Permissioned Model of Blockchain, Cryptographic –Hash Function, Properties of a hash function-Hash pointer and Merkle tree.

UNIT II 6 Hours

BITCOIN AND CRYPTOCURRENCY

A basic crypto currency, Creation of coins, Payments and double spending, FORTH – the precursor for Bitcoin scripting, Bitcoin Scripts , Bitcoin P2P Network, Transaction in Bitcoin Network, Block Mining, Block propagation and block relay.

UNIT III 6 Hours

BITCOIN CONSENSUS

Bitcoin Consensus, Proof of Work (PoW)- Hashcash PoW , Bitcoin PoW, Attacks on PoW, monopoly problem- Proof of Stake- Proof of Burn - Proof of Elapsed Time - Bitcoin Miner, Mining Difficulty, Mining Pool-Permissioned model and use cases.

UNIT IV **5 Hours**
HYPERLEDGER FABRIC & ETHEREUM
Architecture of Hyperledger fabric v1.1- chain code- Ethereum: Ethereum network, EVM, Transaction fee, Mist Browser, Ether, Gas, Solidity.

UNIT V **6 Hours**
BLOCKCHAIN APPLICATIONS
Smart contracts, Truffle Design and issue- DApps- NFT. Blockchain Applications in Supply Chain Management, Logistics, Smart Cities, Finance and Banking, Insurance, etc - Case Study.

1 **5 Hours**
EXPERIMENT 1
Install and understand Docker container, Node.js, Java and Hyperledger Fabric, Ethereum and perform necessary software installation on local machine/create instance on cloud to run.

2 **5 Hours**
EXPERIMENT 2
Create and deploy a blockchain network using Hyperledger Fabric SDK for Java Set up and initialize the channel, install and instantiate chain code, and perform invoke and query on your blockchain network.

3 **5 Hours**
EXPERIMENT 3
Interact with a blockchain network. Execute transactions and requests against a blockchain network by creating an app to test the network and its rules.

4 **5 Hours**
EXPERIMENT 4
Deploy an asset-transfer app using blockchain. Learn app development within a Hyperledger Fabric network.

5 **5 Hours**
EXPERIMENT 5
Use blockchain to track fitness club rewards. Build a web app that uses Hyperledger Fabric to track and trace member rewards.

6 **5 Hours**
EXPERIMENT 6
Car auction network: A Hello World example with Hyperledger Fabric Node SDK and IBM Blockchain Starter Plan. Use Hyperledger Fabric to invoke chain code while storing results and data in the starter plan.

Total: 30+30 =60 Hours

COGNITIVE SCIENCE

3 0 0 3

Course Objectives

- Understand the fundamentals of Cognitive Science
- To apply advanced analytics to cognitive science functions
- Explore how cognitive science used in healthcare system.

Programme Outcomes (POs)

- a. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization for the solution of complex engineering problems.
- b. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- d. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- m. Ability to design and develop Artificial Intelligence algorithms, tools and techniques for solving realworld problems.

Course Outcomes (COs)

1. Interpret the underlying theory behind cognition.
2. Connect to the cognition elements computationally.
3. Outline the mathematical functions through WebPPL.
4. Examine applications using cognitive inference model.
5. Outline the applications of cognitive science in healthcare system.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	2	2		2	2								2	

3	2	2		2	2								2	
4	2	2		2	2								2	
5	2	3		2	2								3	

UNIT I **9 Hours**

INTRODUCTION TO COGNITIVE SCIENCE

The mind in cognitive science- Logic and science of the mind – Place of psychology within cognitive science – Cognitive Neuroscience - Perception - Decision – Learning and memory –Language understanding and processing – Mental- Physical relation – From materialism to mental science.

UNIT II **9 Hours**

COGNITIVE INTELLIGENCE

Machines and Cognition - Artificial intelligence – Architectures of Cognition – Knowledge based systems – Logical representation and Reasoning – Logical decision making – Decision making under uncertainty – Learning – Language – Vision – Robotics.

UNIT III **9 Hours**

PROBABILISTIC PROGRAMMING LANGUAGE

WebPPL Language – Syntax – Using Java script libraries – Manipulating probability types and distributions – Finding inference - Exploring random computation - Coroutines: Functions that receive continuations – Enumeration - Other basic computation.

UNIT IV **9 Hours**

INFERENCE MODELS OF COGNITION

Generative Models – Conditioning – Casual and statistical dependence – Conditional dependence – Data analysis - Algorithm for inference.

UNIT V **9 Hours**

LEARNING MODELS OF COGNITION

Learning as Conditional Inference – Learning with a Language of Thought – Hierarchical Models –Occam’s razor – Learning (Deep) Continuous function – Mixture Models.

Total: 45 Hours

Course Objectives

- To provide the basic knowledge about the pattern recognition and its applications.
- Implement the supervised and unsupervised algorithms for pattern classification.

Programme Outcomes (POs)

- Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization for the solution of complex engineering problems.
- Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design and development of solutions: Design solutions for complex engineering problems, using design and development processes, selecting and applying appropriate design and development techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- Ability to design and develop Artificial Intelligence algorithms, tools and techniques for solving real world problems.

Course Outcomes (COs)

1. Illustrate the basic concepts of pattern recognition.
2. Apply supervised learning models for assigning class label to the input pattern.
3. Implement unsupervised algorithm to group similar patterns into clusters.
4. Apply feature selection algorithms to select the features.
5. Analyze the various fuzzy techniques used in pattern classification.

Articulation Matrix

3	3	3		3	3								3	
4	3	3		2	3								3	
5	2	3		2	3								3	

UNIT I**9 Hours****INTRODUCTION TO PATTERN RECOGNITION**

Importance of Pattern Recognition – Features - Feature Vectors and Classifiers - Supervised, Unsupervised and Semi-supervised learning - Introduction to Bayes Decision Theory - Discriminant

Functions and Decision Surfaces-Gaussian PDF and Bayesian Classification for Normal Distributions.

UNIT II **9 Hours**
CLASSIFIERS

Estimation of Unknown Probability Density Functions –Maximum Likelihood Parameter Estimation - Maximum Entropy Estimation - The Naive-Bayes Classifier -Linear Classifiers - Perceptron Algorithm - Least Square Methods - Support Vector Machines for Classification.

UNIT III **9 Hours**
CLUSTERING

Clustering for Unsupervised Learning and Classification-C-means Algorithm-Hierarchical Clustering Procedures - Validity of Clustering Solutions.

UNIT IV **9 Hours**
FEATURE EXTRACTION AND SELECTION

Introduction - Basis Vectors and Images - Entropy Minimization – Karhunen loeve Transformation – Feature Selection through Functions Approximation – Binary Feature Selection – K-NN.

UNIT V **9 Hours**
RECENT ADVANCES

Fuzzy Classification: Fuzzy Set Theory- Fuzzy and Crisp Classification-Elementary Neural Network for Pattern Recognition – Hebbnet – ADALINE - Case Study: Virtual search, Face recognition and Image pattern recognition.

TOTAL: 45 Hours

QUANTUM COMPUTING

3 0 0 3

Course Objectives

- Understand the background of classical computing and quantum computing.
- Acquire the knowledge about the hardware and mathematical models of quantum computation.

Programme Outcomes (POs)

c. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization for the solution of complex engineering problems.

d. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

f. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to

provide valid conclusions.

g. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

n. Ability to design and develop Artificial Intelligence algorithms, tools and techniques for solving real world problems.

Course Outcomes (COs)

1. Understand the basics of information processing tasks that can be accomplished using quantum mechanical systems.
2. Understand the background of Quantum Mechanics that allows the calculation of properties of physical systems.
3. Analyze the Quantum algorithms which is used in circuit model.
4. Analyze the computation models used in quantum information theory.
5. Interpret quantum security in order to ensure that any attempt to intercept.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

3	2	2		2	2								2	
4	2	2		2	2								2	
5	2	3		2	2								3	

UNIT I

9 Hours

QUANTUM COMPUTING BASIC CONCEPTS

Complex Numbers - Matrices and Operators - Quantum Mechanics – Linear Algebra - The Postulates of Quantum Mechanics - Quantum Bits - Representations of Qubits – Superpositions

UNIT II

9 Hours

QUANTUM GATES AND CIRCUITS

Quantum Computation - Single qubit gates - Multiple qubit gates – Quantum Circuits – Qubit Copying Circuit - Circuit development - Quantum error correction.

UNIT III

9 Hours

QUANTUM ALGORITHMS

Quantum parallelism - Deutsch's algorithm - The Deutsch–Jozsa algorithm - Quantum Fourier transform and its applications - Quantum Search Algorithms: Grover's Algorithm: Grover's Algorithm-Quantum search as a quantum simulation - Quantum counting.

UNIT IV

9 Hours

QUANTUM INFORMATION THEORY

Data compression - Shannon's noiseless channel coding theorem - Schumacher's quantum noiseless channel coding theorem – Communication Over Noisy Quantum Channels – Quantum Information Over Noisy Quantum Channels.

UNIT V

9 Hours

QUANTUM CRYPTOGRAPHY

Principles of Information Security – One-Time Pad - Public key cryptography – RSA Coding Scheme-
Quantum Cryptography – Quantum Key Distribution - BB84 - Ekert 91.

Total: 45 Hours

Course Objectives

- To enable the students to understand the basics of HRM.
- To gain the knowledge about strategies required to select and manage manpower resources.
- To understand the role of training and development in the organisation.
- To understand job-based compensation scheme and career management.
- To give an insights about performance evaluation and grievance redressal methods.

Programme Outcomes (POs)

f. The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

k. Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Analysis the various aspects of HRM and its relevance in the organization.
2. Ability to plan, recruits, select and manage the job candidate.
3. Assess the training needs and able to train using various methods of Training.
4. Able to implement Employee benefits and Welfare measures, Employee safety and Health Measures.
5. Evaluate the Performance of the employees and able to devise the strategies to handle the employee issues.

UNIT I**9 Hours****PERSPECTIVES IN HUMAN RESOURCE MANAGEMENT**

Evolution of human resource management-The importance of the human capital-Role of human resource manager-Challenges for human resource managers-trends in Human resource-Computer applications in human resource management-Human resource accounting

UNIT II**9 Hours****HUMAN RESOURCE PLANNING AND RECRUITMENT**

Importance of Human Resource Planning-Forecasting human resource requirement-matching supply and demand-- Internal and External sources-Organizational Attraction-Recruitment, Selection, Induction and

Socialization- Theories, Methods and Process

UNIT III

9 Hours

TRAINING AND DEVELOPMENT

Types of training methods-purpose-benefits-resistance. Executive development programme-Common practices-Benefits-Self Development-Knowledge management

UNIT IV

9 Hours

EMPLOYEE ENGAGEMENT

Compensation plan-Reward-Motivation-Application of theories of motivation -Career management-Mentoring-Development of mentor-Protege relationships- Job Satisfaction, Employee Engagement, Organizational Citizenship Behaviour-Theories, Models

UNIT V

9 Hours

PERFORMANCE EVALUATION AND CONTROL

Method of performance evaluation-Feedback-Industry practices. Promotion, Demotion, Transfer and Separation-Implication of job change. The control process-Importance-Methods-Requirement of effective control systems grievances-causes-implications-Redressal methods

Total: 45 Hours

FINANCIAL MANAGEMENT

3 0 0 3

Course Objectives

- Understand basics of Financial Management and the concept of Time Value of Money
- Analyse the Securities Value and its Risk & Return
- Analyse the business risk, financial risk and cost of capital for maximizing the share holder
- Analyse the cash flows to make investment decision
- Discover basic understanding of a company's working capital structure.

Programme Outcomes (POs)

b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

d. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of

the limitations.

k. Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Able to perform the basic Financial Functions and apply the concept of Time Value of Money while taking the Financial Decisions
2. Perform the Security Valuation and construct the Portfolio for given level and risk and expected rate of return
3. Manage the risk using Operating and Financial Leverages and calculate the Cost of Capital
4. Able to apply appropriate Capital Budgeting Techniques while taking Investment Decision
5. Ensure the short-term liquidity by appropriately managing the Working Capital

Articulation Matrix

3		2		2	3						3		2	2
4		2		3	3						3		2	2
5		2		2	2						3		2	2

UNIT I

9 Hours

INTRODUCTION

Introduction to Financial Management - Goals of the firm - Financial Environments. VALUE OF MONEY: Simple and Compound Interest Rates, Amortization, Computing more than once a year, Annuity Factor.

UNIT II

9 Hours

VALUATION OF SECURITIES

Bond Valuation, Preferred Stock Valuation, Common Stock Valuation, Concept of Yield and YTM. RISK AND RETURN: Defining Risk and Return, Using Probability Distributions to Measure Risk, Attitudes Toward Risk, Risk and Return in a Portfolio Context, Diversification, the Capital Asset Pricing Model (CAPM)

UNIT III

9 Hours

OPERATING AND FINANCIAL LEVERAGE

Operating Leverage, Financial Leverage, Total Leverage, and Indifference Analysis in leverage study. COST OF CAPITAL: Concept , Computation of Specific Cost of Capital for Equity ,Preference-Debt, Weighted Average Cost of Capital, Factors affecting Cost of Capital 4L

UNIT IV

9 Hours

CAPITAL BUDGETING

The Capital Budgeting Concept & Process - An Overview, Generating Investment Project Proposals, Estimating Project, After Tax Incremental Operating Cash Flows, Capital Budgeting Techniques, Project Evaluation and Selection - Alternative Methods

UNIT V**9 Hours****WORKING CAPITAL MANAGEMENT**

Overview, Working Capital Issues, Financing Current Assets (Short Term and Long Term- Mix), Combining Liability Structures and Current Asset Decisions, Estimation of Working Capital. Cash Management: Motives for holding cash, speeding up Cash Receipts, Slowing down Cash Pay-outs, Electronic Commerce, Outsourcing, Cash Balances to maintain, and Factoring. Accounts Receivable Management: Credit and Collection Policies, Analyzing the Credit Applicant, Credit References, Selecting optimum Credit period

22CB029**SUPPLY CHAIN MANAGEMENT****3 0 0 3****Course Objectives**

- Understand the objectives, importance, and decision phases of supply chain management
- Examine the different supply chain strategies and how to achieve strategic fit.
- Analyze the importance of cross-functional collaboration in supply chain management
- Apply supply chain management concepts to real-world problems.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify and formulate complex engineering problems related to the internet and web development, such as how to design a secure and efficient web application.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- i. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- j. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write

effective reports and design documentation, make effective presentations, and give and receive clear instructions.

k. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's work, as a member and leader in a team, to manage projects and in multi disciplinary environments.

m.PSO1 Ability to demonstrate technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Understand the key concepts of supply chain management.
2. Develop a supply chain strategy to achieve strategic goals.
3. Plan the supply chain to identify key stakeholders.
4. Implement the supply chain plan.
5. Analyze supply chain performance and develop a supply chain culture.

Articulation Matrix

UNIT I

9 Hours

SUPPLY CHAIN STRATEGY

Understanding Supply Chain : Objectives, Importance, Decision Phases, Process Views- Supply Chain Strategies: Competitive And Supply Chain Strategies, Achieving Strategic Fit, Expanding Strategic Scope, Challenges-Supply Chain Drivers And Metrics :Financial Measures, Drivers of Supply Chain Performance, Framework For Structuring Drivers

UNIT II

9 Hours

SUPPLY CHAIN NETWORK DESIGN

Role of Distribution In Supply Chain-Factors Influencing Distribution Network Design-Design Options For Distribution Network-Role Of Network Design In The Supply Chain-Factors Influencing Network Design Decisions-Framework For Network Design Decisions-Models For Facility Location And Capacity Location-Impact Of Globalization On Supply Chain Networks

UNIT III

9 Hours

DEMAND SUPPLY PLANNING

Demand Forecasting In Supply Chain : Role Of Forecasting In Supply Chain, Characteristics of Forecasts-Forecasting Methods-Role Of IT In Forecasting-Aggregate Planning In The Supply Chain : Role-Characteristics-Aggregate Planning-Role of IT In Aggregate Planning-Sales And Operation Planning-Coordination In Supply Chain

UNIT IV**9 Hours****INVENTORY MANAGEMENT**

Role of cycle inventory-estimating cycle inventory-short term discounting-managing multi echelon cycle inventory-role of safety inventory-impacts on safety inventory-managing safety inventory in multi echelon supply chain- role of it in inventory management-estimating and managing safety inventory-Product Availability-Transportation

UNIT V**9 Hours****CROSS FUNCTIONAL SCM**

Source Decisions: Role-Sourcing-Logistics Providers and Suppliers-Pricing And Revenue Management: Role-Usage-Information Technology In Management : Role-Supply chain IT Framework-Customer/Supplier Relationship management-Sustainability And The Supply Chain : Role-Keymetrics-Sustainability And Supply Chain Drivers-closed loop supply chain

Total: 45 Hours**Reference(s)**

22CB030**IT PROJECT MANAGEMENT****3 0 0 3****Course Objectives**

- Understand what is a project management and scheduling
- Analyze the project management features and feasibility studies.
- Understand the purpose of SURUM and DEVOPS in project management.

Programme Outcomes (POs)

c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

i. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

j. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Understand the concept of project management.
2. Understand the project management scheduling
3. Analyze the features of project management with respect to AGILE model.
4. Explore the services of SURUM.
5. Understand the concept of Devops in project management.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1			1										1

3			2										2	
4					2									2
5					1				1	1				2

UNIT I

9 Hours

PROJECT OVERVIEW AND FEASIBILITY STUDIES

Identification - Market and Demand Analysis- Project Cost Estimate, Financial Appraisal

UNIT II

9 Hours

PROJECT SCHEDULING PROJECT SCHEDULING

Project Scheduling, Introduction to PERT and CPM - Critical Path Calculation - Precedence Relationship - Difference between PERT and CPM - Float Calculation and its importance - Cost reduction by Crashing of activity - Cost Control and Scheduling: Project Cost Control (PERT/Cost - Resource Scheduling & Resource Leveling

UNIT III

9 Hours

PROJECT MANAGEMENT FEATURES

Risk Analysis-Project Control-Project Audit and Project Termination-Introduction, Agile Principles-Agile methodologies-Relationship between Agile Scrum-Lean-DevOps and IT Service Management (ITIL)

UNIT IV

9 Hours

SCRUM PROJECT MANAGEMENT

Scrum-Various terminologies used in Scrum-Sprint, product backlog- sprint backlog-sprint review-retro perspective-various roles (Roles in Scrum)-Best practices of Scrum

UNIT V

9 Hours

DEVOPS

Overview and its Components-Containerization Using Docker-Managing Source Code and Automating Build-Automated Testing and Test Driven Development-Continuous Integration-Configuration Management-Continuous Deployment-Automated Monitoring-Other Agile Methodologies-Introduction to XP FDD-DSDM-Crystal

Total: 45 Hours

2. Roman Pichler, Agile Product Management with Scrum, 2021.
3. Ken Schwaber, Agile Project Management with Scrum (Microsoft Professional), 2004.

Course Objectives

- The successful completion of the course will help students gain knowledge on: How to identify and discover market needs
- How to manage an innovation program
- How to create, protect, assetize and commercialize intellectual property
- Opportunities and challenges for entrepreneurs

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- h. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- i. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

Course Outcomes (COs)

1. Summarize the life cycle and types of innovation
2. Understand the challenges in the innovation
3. Interpret the needs, benefits and procedure of filing an IPR
4. Examine a business plan to ensure success of a start-up
5. Analyze the requirements of the technology-driven social innovation

Articulation Matrix

2	2	1						2						
3								-						
4		3			2			1					1	
5		3			1			-	2					

UNIT I**7 Hours****INNOVATION**

A primer on Innovation, IP Rights and Entrepreneurship, Types of Innovation (incremental, disruptive, etc.), Lifecycle of Innovation (idea, literature survey, PoT, PoC, etc.)

UNIT II**10 Hours****CHALLENGES IN INNOVATION**

Challenges in Innovation (time, cost, data, infrastructure, etc.), co-innovation and open innovation (academia, start-ups and corporates), Technology innovation - case study - jile - A scalable agile devops products, curefit - A platform to stay healthy.

UNIT III**9 Hours****INTELLECTUAL PROPERTY RIGHT**

Types of IPR (patents, copyrights, trademarks, GI, etc.), Lifecycle of IP (creation, protection, assetization, monetization), Balancing IP risks & rewards (Right Access and Right Use of Open Source and 3rd party products, technology transfer & licensing), IP valuation (methods, examples, limitations).

UNIT IV**10 Hours****ENTREPRENEURSHIP**

Opportunity identification in technology entrepreneurship (customer pain points, competitive context), Market research, segmentation & sizing, Product positioning & pricing, go-to-market strategy, Innovation assessment (examples, patentability analysis)

UNIT V**9 Hours****ENTREPRENEURSHIP - SOCIAL INNOVATION**

Startup business models (fund raising, market segments, channels, etc.), Innovation, Incubation & Entrepreneurship in Corporate Context Technology-driven Social Innovation & Entrepreneurship, Manage innovation, IP and Entrepreneurship Programs- Processes, Governance and Tools.

Total: 45 Hours**Reference(s)**

1. Joe Tidd, John Bessant. Managing Innovation: Integrating Technological, Market and Organizational Change
2. Richard Razgaitis, Valuation and Dealmaking of Technology-Based Intellectual Property Principles, Methods and Tools, Wiley, 2009
3. Clayton M.Christensen, Innovator's Dilemma: When New Technologies Cause Great Firms to Fail (Management of Innovation and Change), Harvard Business Review Press, 2013
4. Case Study Materials: To be distributed for class discussion

22CB032**BEHAVIORAL ECONOMICS****3 0 0 3****Course Objectives**

- To impart the knowledge on the concepts of behavioral economics
- To introduce the knowledge of biases, beliefs of buyers, self-evaluation, and self-projection
- To provide the knowledge of loss aversion
- To familiarize inter-temporal choice, hyperbolic discounting, and procedural choice
- To introduce the knowledge of game theory and Nash equilibrium.

Programme Outcomes (POs)

c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

d. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

g. Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Interpret the neoclassical, standard model and behavioral economics
2. Analyze of the statistical decision theory approaches to understanding of the principles of decision making under risk
3. Compare the various theories in the choice under uncertainty
4. Analyze the knowledge of approaches to human decision in time, and the problems related to inconsistency in inter-temporal preferences
5. Apply the behavioural concepts in strategic interaction

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2			2	1										2
3			2				1							3
4			2	1										2
5			2	2										2

UNIT I

9 Hours

INTRODUCTION

The neoclassical/standard model and behavioral economics in contrast-historical background-behavioral economics and other social sciences-theory and evidence in the social sciences and in behavioral economics-applications-gains and losses-money illusion-charitable donation.

UNIT II

9 Hours

BASICS OF CHOICE THEORY

Supervised Learning; The problem of classification-Feature engineering-Training and testing classifier models-Cross-validation-Model evaluation (precision, recall, F1-measure, accuracy, area under curve)-Statistical decision theory including discriminant functions and decision surfaces-Naive Bayes classification-Bayesian networks-Decision Tree and Random Forests-k-Nearest neighbor classification-Support Vector Machines-Artificial neural networks including backpropagation-Applications of classifications-Ensembles of classifiers including bagging and boosting Revisiting rationality-causal aspects of irrationality-different kinds of biases and beliefs-self-evaluation and self-projection-inconsistent and biased beliefs-probability estimation-trading applications-trade in counterfeit goods-financial trading behavior-trade in memorabilia

UNIT III

9 Hours

CHOICE UNDER UNCERTAINTY

Background and expected utility theory-prospect theory and other theories-reference points- loss aversion-marginal utility-decision and probability weighting-applications-ownership and trade-income and consumption-performance in sports.

UNIT IV

9 Hours

INTERTEMPORAL CHOICE

Geometric discounting-preferences over time-anomalies of inter-temporal decisions- hyperbolic discounting-instantaneous utility-alternative concepts-future projection-mental accounts-heterogeneous selves-procedural choice-policy analysis-mobile calls-credit cards-organization of government-applications-consumption and savings-clubs and membership-consumption planning.

UNIT V**9 Hours****STRATEGIC CHOICE**

Review of game theory and Nash equilibrium-strategies-information-equilibrium in pure and mixed strategies-iterated games-bargaining-signaling-learning-applications-competitive sports- bargaining and negotiation- monopoly and market entry individual preferences- choice anomalies and inconsistencies -social preferences -altruism -fairness-reciprocity-trust-learning-communication-intention-demographic and cultural aspects-social norms-compliance and punishment-inequity aversion-policy analysis-norms and markets-labor markets-market clearing-public goods-applications-logic and knowledge- voluntary contribution-compensation design.

Total: 45 Hours**Reference(s)**

1. N. Wilkinson and M. Klaes, An Introduction to Behavioral Economics, 3rd Edition, Palgrave Macmillan,2012

Course Objectives

- To understand the fundamentals of Digital Marketing
- To analyze various social media marketing
- To understand email and mobile marketing
- To understand the basics of Analytics tools including Google Analytics and Adwords.
- To learn the different types of SEO and SEM.

Programme Outcomes (POs)

- Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

1. Demonstrate the role and importance of digital marketing in today's rapidly changing business environment.
2. Discover the techniques to help organizations to utilize social media for digital marketing.
3. Analyze the key elements and campaign effectiveness of E-Mail marketing and mobile marketing.
4. Evaluate the effectiveness of a digital marketing campaign using Google Analytics.
5. Apply advanced practical skills to plan, predict and manage digital marketing campaign

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

4	2	3	3		3	2	2			3				2
5	2	3	3		3	2	2			2				1

UNIT 1 **9 Hours**

BASICS OF DIGITAL MARKETING

Introduction to online digital marketing - Importance of digital marketing - Traditional Vs. Digital Marketing - Types of Digital Marketing - Digital marketing channels- Visitor's engagement- Targeted traffic - Lead generation.

UNIT 2 **9 Hours**

SOCIAL MEDIA MARKETING

Social media analytics, Social media Advertising-Facebook page Optimization-Facebook for business-The basics of Facebook Ads-Instagram Business Profile Creation and Optimization-Twitter Basics and Optimizing Twitter-Twitter Hashtags and Trend analytics.

UNIT 3 **9 Hours**

E- MAIL AND MOBILE MARKETING

E- Mail Marketing – Types of E- Mail Marketing – Email Automation – Integrating Email with Social Media and Mobile- Measuring and maximizing email campaign effectiveness. Mobile Marketing-Mobile Inventory/channels- Location based; Context based; Coupons and offers, Mobile Apps, Mobile Commerce, SMS Campaigns-Profiling and targeting.

UNIT 4 **9 Hours**

DIGITAL MEDIA ANALYTICS

Content Marketing, AdSense, Blogging, and Affiliate Marketing - Influencer Marketing- Video marketing, Google Analytics, Behaviour and acquisition report, Digital media planning and buying- Web remarketing- Design essentials.

UNIT 5 **9 Hours**

SEARCH ENGINE OPTIMIZATION (SEO) AND SEARCH ENGINE MARKETING (SEM)

Search Engine Optimization (SEO): Introduction, On-page SEO, Off-page SEO, Keyword research-Factors affecting the rank of web page. Search Engine Marketing (SEM): Google Ads- Creating campaigns- Search volume - Google Adwords-Site and keyword targeting- Demographic Targeting-Google keyword planner.

Total: 45 Hours

Course Objectives

- Enable attendees to acquire knowledge on chatbots and its terminologies.
- Work with ML Concepts and different algorithms to build custom ML Model
- Better understand on Conversational experiences and provide better customer experiences

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- f. The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.
- n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Classify the fundamentals of conversational systems
2. Outline the basic concepts in chatbots using the Natural Language Processing.
3. Design a chatbot using Conversational Artificial Intelligence Systems.
4. Analyze how conversational systems uses ML technologies.
5. Outline the XR technologies in Conversational Systems.

Articulation Matrix

3	2	2	2	1	3	2								2
4	1	2	1	1									1	
5	1	1	1	2										2

UNIT I **9 Hours**

FUNDAMENTALS OF CONVERSATIONAL SYSTEMS

Overview, Case studies, Explanation about different modes of engagement for a human being, History and impact of AI, Underlying technologies-Natural Language Processing, Artificial Intelligence, and Machine Learning, NLG, Speech-To-Text, Text-To-Speech, Computer Vision, etc, Introduction to Top players in Market-Google, MS, Amazon & Market trends Messaging Platforms (Facebook, WhatsApp) and Smart speakers-Alexa, Google Home and other new channels Ethical and Legal Considerations in AI Overview

UNIT II **9 Hours**

FOUNDATIONAL BLOCKS FOR PROGRAMMING AND NATURAL LANGUAGE PROCESSING

Basic Python programming concepts, Node Basics, Coding Best Practices, Evaluation Test(Hands-On)-1HR, Introduction-Brief history, Basic Concepts, Phases of NLP, Application of chatbots, General chatbot architecture, Basic concepts in chatbots-Intents, Entities, Utterances, Variables and Slots, Fulfillment Lexical Knowledge Networks (WordNet, Verbnet, PropBank, etc), Lexical Analysis, Part-of-Speech Tagging, Parsing/Syntactic analysis, Semantic Analysis, Word Sense Disambiguation, Information Extraction, Sentiment Analysis, NLP using Python-Make use of any of the NLP libraries like NLTK, spaCy, StanfordNLP, etc, (Practice session to use an NLP Tool -Hands-on), Affective NLG

UNIT III **9 Hours**

BUILDING A CHATBOT/CONVERSATIONAL AI SYSTEMS

Fundamentals of Conversational Systems (NLU, DM, and NLG), Chatbot framework & Architecture, Conversational Flow & Design, Intent Classification (ML and DL based techniques), Dialogue Management Strategies, Natural Language Generation, UX design, APIs and SDKs, Usage of Conversational Design Tools, Introduction to popular chatbot frameworks-Google Dialog flow, Microsoft Bot Framework, Amazon Lex, RASACHannels-Facebook Messenger, Google Home, Alexa, WhatsApp, Custom Apps, Overview of CE Testing techniques, A/B Testing, Security & Compliance-Data Management, Storage, GDPR, PCI, Building a Voice/ChatBot - Hands-on

UNIT IV **9 Hours**

ROLE OF ML/AI IN CONVERSATIONAL TECHNOLOGIES

Brief Understanding on how Conversational Systems uses ML technologies in ASR, NLP, Advanced Dialog management, Language Translation, Emotion/Sentiment Analysis, Information extraction, etc, to effectively converse.

UNIT V **9 Hours**

CONTACT CENTERS AND OVERVIEW ON CONVERSATIONAL ANALYTICS

Introduction to Contact centers-Impact & Terminologies, Case studies & Trends, how does a Virtual Agent/Assistant fit in here, Conversation Analytics-The need of it, Introduction to Conversational Metrics, Summary

Total: 45 Hours

2. Nitin Indurkha, Fred J. Damerau, Handbook of Natural Language Processing,2010.
3. Gerardus Blokdyk , Conversational Chatbots for Analytics Third Edition 2018

Course Objectives

- Understand the basic ideas of Text mining.
- Analyze the methods and approaches used in analytics.
- Gain knowledge on various types of analytics like web, social network, and social media.

Programme Outcomes (POs)

- Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Course Outcomes (COs)

1. Demonstrate the concepts and applications of text mining.
2. Explain Content analysis and Sentiment analysis.
3. Illustrate web analytics with a suitable model.
4. Illustrate social network analytics with suitable example.
5. Illustrate social media analytics with suitable example.

Articulation Matrix

3	2	-		2	2									
4	2	2	-	2	2									
5	2	2		2	-									

UNIT I**7 Hours****TEXT MINING**

Introduction- Core text mining operations- Preprocessing techniques- Categorization- Clustering- Information extraction- Probabilistic models for information extraction-Text mining applications.

UNIT II**9 Hours****METHODS**

Content Analysis- Natural Language Processing- Clustering & Topic Detection- Simple Predictive Modeling- Sentiment Analysis; Sentiment Prediction.

UNIT III**9 Hours****WEB ANALYTICS**

Web analytics tools- Clickstream analysis-A/B testing-Online surveys-Web search and retrieval-Search engine optimization-Web crawling and Indexing-Ranking algorithms-Web traffic models.

UNIT IV**10 Hours****SOCIAL NETWORK ANALYTICS**

Social contexts: Affiliation and identity-Social network analysis-Social network and web data and methods. Graphs and Matrices-Basic measures for individuals and networks.

UNIT V**10 Hours****SOCIAL MEDIA ANALYTICS**

Information visualization-Making connections: Link analysis-Random graphs and network evolution.

Total: 45 Hours**Reference(s)**

22CB036**RISK ANALYTICS****3 0 0 3****Course Objectives**

- Understand the fundamental principles and concepts of risk analytics.
- Develop skills to identify, measure, and assess different types of risk.
- Apply statistical and quantitative techniques to analyse and model risk.
- Gain practical experience in using risk analytics tools and software.
- Learn how to communicate risk analysis and risk modeling results effectively.

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- h. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- k. Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Course Outcomes (COs)

1. Understand the risk management framework.
2. Analysis the analytical techniques.
3. Analysis the frameworks of risk prioritization and risk assessment.
4. Understand the risk analytics tools and visualization techniques.
5. Apply probability and statistical methods to risk modeling.

Articulation Matrix

1	2													
2		3												
3		2						2						
4	2	3												
5	2	2												

UNIT I

9 Hours

INTRODUCTION TO RISK ANALYTICS

Introduction of risk analytics and types of risk-Risk management frameworks-Role of risk analytics in decision-making-Probability Theory and Statistics-Basic probability concepts-Random variables and probability distributions-Statistical inference and hypothesis testing

UNIT II

9 Hours

RISK IDENTIFICATION

Preliminary Hazard Analysis (PHA), Hazards and Operability Analysis (HAZOP) - Job Safety Analysis (JSA) - Failure Modes and Effects Analysis (FMEA)- Fault Tree Analysis (FTA), Event Tree Analysis (ETA), Decision Trees- Cause-Consequence Analysis (CCA)

UNIT III

9 Hours

RISK PRIORITIZATION

Risk Identification and Categorization-Risk registers and risk breakdown structures-Risk taxonomy and classification frameworks-Risk Assessment and Evaluation-Quantitative and qualitative methods for assessing risks-Risk scoring and ranking methodologies.

UNIT IV

9 Hours

RISK ANALYTICS TOOLS

Introduction to risk analytics software-Data visualization for risk analysis-Case studies using risk analytics tools-Risk Communication and Reporting-Effective communication of risk analysis results-Visualization techniques for risk reporting-Ethical issues in risk assessment and modelling.

UNIT V

9 Hours

STATISTICAL METHODS FOR RISK MODELING

Probability distributions and their applications in risk modeling-Estimation and inference for risk parameters-Correlation and dependence modeling-Time series analysis for risk forecasting-Insurance Risk Analytics-Underwriting risk assessment-Claims analysis and reserving.

ENTERPRISE SECURITY

3 0 0 3

Course Objectives

- Apply ethical frameworks to analyze problems and evaluate alternative solutions
- Design appropriate security architecture with an understanding of the technology
- Create and deploy enterprise solutions in support of organizational goals

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- h. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- m. Ability to demonstrate technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

Course Outcomes (COs)

1. Outline the basic principles of Security and Networks.
2. Implementing the network concepts in Risk management for IT Security.
3. Examine the Professional code of ethics along with law.
4. Design Software development life cycle with TCP/IP Protocols.
5. Design Security Architecture for real time application.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	1												1	
2	1												1

UNIT I 9 Hours

INTRODUCTION TO INFORMATION SECURITY AND COMPUTER NETWORKS

CIA triad: Confidentiality, Integrity, Availability - RMIAS model-Information Security knowledge area - Cyber Security industry, certifications and careers - Cryptography - Introduction to Networking Security protocols - Threats-Authentication and Authorization - Access Controls - Security Vulnerabilities - Security Tools -Penetration testing.

UNIT II 9 Hours

IT SECURITY GOVERNANCE AND RISK MANAGEMENT

Four types of policies - Develop and manage security policies – Perform risk management for IT security - Threat identification and classification - Incident Management - IT security business continuity planning - IT security disaster recovery planning.

UNIT III 9 Hours

ETHICS AND PHYSICAL SECURITY

Types of computer crime - Privacy and the law Computer forensics - Information security professional’s code-of ethics – Intellectual property law - Physical security domain - Physical safeguards -The General Data Protection Regulation (GDPR) - The Sarbanes-Oxley Act (SOX) - The Health Insurance Portability and Accountability Act (HIPAA) - Consumer Privacy Act.

UNIT IV 9 Hours

IT SECURITY ENTERPRISE SOLUTIONS

Software Development Lifecycle (SDLC) - Best practices in software engineering - Network security in context Protecting TCP/IP networks -Virtual Private Networks - IPSec - Data classification - Data Loss Prevention - DLP implementation - Encryption and hashing - Encrypting data in use - Encrypting data in transit – Tokenization - Data masking - Intrusion detection - systems - Identity and access management (IAM) – Firewalls in Enterprise Security.

UNIT V 9 Hours

NETWORK SECURITY ARCHITECTURE AND DESIGN

Defining the trusted computing base - System Security Assurance concepts - Confidentiality and Integrity models - Design Principles and Elements - Design Tools and Techniques - Disaster Recovery and Business Continuity - Business impact analysis - Disaster recovery plan - Business continuity plan.

Total:45 Hours

Reference(s)

4. Next-Generation Enterprise Security and Governance, by Mohiuddin Ahmed, Nour Moustafa, Abu Barkat, Paul Haskell-Dowland, 2022.

Course Objectives

- Understand the data mining functionalities, technologies and steps in pre-processing the data.
- Analyze the data using data mining algorithms, methods and tools.

Programme Outcomes (POs)

a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

c. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

f. The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

l. Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

m. PSO1 Ability to demonstrate the technical knowledge in Computer Science with equal appreciation of humanities, management sciences and human values.

n. PSO2 To create, select, and apply appropriate techniques, resources, modern engineering and business tools including prediction and data analytics to complex engineering activities and business solutions

Course Outcomes (COs)

1. Understand various data mining technologies and applications
2. Analyze data pre-processing techniques with knowledge representation.
3. Apply suitable classification algorithms to perform prediction.
4. Apply regression analysis for prediction and approximation
5. Apply prescriptive analysis on time series data.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

4	2		2		2							2	3	3
5	3		3		3							3	2	3

UNIT I**7 Hours****INTRODUCTION TO DATA MINING**

Data Mining - Related technologies - Machine Learning, DBMS, OLAP, Statistics, Stages of the Data Mining Process, Data Mining Techniques, Knowledge Representation Methods, Applications

UNIT II**9 Hours****DATA PREPROCESSING AND DATA MINING KNOWLEDGE REPRESENTATION**

Data cleaning, Data transformation, Data reduction, Discretization and generating concept hierarchies. Data mining knowledge representation - Task relevant data, Background knowledge, Representing input data and output knowledge, Visualization techniques. Attribute-oriented analysis - Attribute generalization, Attribute relevance, Class comparison, Statistical measures

UNIT III**9 Hours****DATA MINING ALGORITHMS**

Association rules - Motivation and terminology, Basic idea: item sets, Generating item sets and rules efficiently, Correlation analysis. Classification - Basic learning/mining tasks, Inferring rudimentary rules: 1R algorithm, Decision trees, covering rules. Prediction - The prediction task, Statistical (Bayesian) classification, Bayesian networks, Instance-based methods (nearest neighbor), linear models

UNIT IV**10 Hours****REGRESSION ANALYSIS**

Descriptive analysis, Data Modeling, Trend analysis, Simple Linear Regression Analysis. Forecasting model, heuristic methods, predictive modeling and pattern discovery, logistic regression, logit transform, ML estimation, Tests of hypotheses, Wald test, score test, test for overall regression, multiple logistic regression, forward backward method, interpretation of parameters, relation with categorical data analysis. Nonlinear regression (NLS), Linearization transforms, their uses and limitations. Introduction to nonparametric regression methods.

UNIT V**10 Hours****TIME SERIES AND PERSPECTIVE ANALYSIS**

Auto Covariance, Auto-correlation and their properties. Exploratory time series analysis, Test for trend and seasonality, Exponential and moving average smoothing, Holt Winter smoothing, forecasting based on smoothing. Linear time series models- autoregressive, Moving Average, Auto regressive Moving Average and Auto regressive Integrated Moving Average models. Prescriptive analytics, Mathematical optimization, Networks modelling, Multi objective optimization Stochastic modelling, Decision and Risk analysis, Decision trees.

Course Objectives

- To understand the importance of Diversity in workplace
- To recognize the importance of Emotional Intelligence, Multiple Intelligences, and Learner Styles
- To develop communicative writing and apply public speaking in real-life scenarios
- To recognize the importance of Corporate Social Responsibility, Corporate Etiquette, Stress Management, Time Management and Conflict Management

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- e. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- f. The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- g. Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- i. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- j. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

1. Use tools of structured written communication and hone public speaking skills
2. Apply emotional intelligence and knowledge of multiple intelligences, and learning styles in real-life scenarios
3. Understand the importance of diversity in workplace and corporate social responsibility
4. Identify and practice best time management, stress management practices
5. Recognize and cultivate the attributes needed to function and grow in a corporate environment

5						-	-		-	-				

UNIT I**10 Hours****WORKPLACE ENVIRONMENT AND BUSINESS WRITING**

Importance of diversity in workplace, Diversity in corporate environments, Principles of Communicative Writing, Formal and Business letters, best practices for writing business proposals, using charts and graphs in communicative writing, emotional intelligence, public speaking at workplace and real life scenarios, role plays

UNIT II **5 Hours**

CORPORATE SOCIAL RESPONSIBILITY

Importance of Corporate Social Responsibility (CSR), attributes needed to function and grow in a corporate environment

UNIT III **5 Hours**

FEEDBACK AND EMOTIONAL INTELLIGENCE

Image Management, best practices to share and receive feedback, Applying emotional intelligence in real life scenarios

UNIT IV **5 Hours**

MULTIPLE INTELLIGENCES AND CONFLICT MANAGEMENT

Multiple intelligence and learning styles in interpersonal interactions, impact of conflicts, guidelines to manage conflicts, key features of corporate etiquette, business idioms and corporate terms

UNIT V **5 Hours**

STRESS, TIME MANAGEMENT AND PROJECT WORK

Impact of stress in life and work, managing stress, best practices to manage stress, importance of time management, best time management practices

1 **30 Hours**

EXPERIMENT 1

Project work: proof of concept for a start-up

Total: 30+30 =60 Hours

Course Objectives

- To develop an understanding and analyze the energy data of industries
- To carryout energy accounting and balancing
- To conduct energy audit and suggest methodologies for energy savings and
- To utilize the available resources in optimal ways

Course Outcomes (COs)

1. Classify and characterize the various energy utilization techniques.
2. Identify suitable technique to provide an energy efficient system.
3. Identify the need for thermal systems with latest technologies.
4. Choose suitable techniques doe conserving energy with respect to emerging trends.
5. Assess the impact economics on the conservation of energy.

5	1	2	2								1	3

UNIT I**9 Hours****INTRODUCTION**

Energy - Power – Past & Present scenario of World; National Energy consumption Data – Environmental aspects associated with energy utilization – Energy Auditing: Need, Types, Methodology and Barriers. Role of Energy Managers. Instruments for energy auditing.

UNIT II**9 Hours****ELECTRICAL SYSTEMS**

Components of EB billing – HT and LT supply, Transformers, Cable Sizing, Concept of Capacitors, Power Factor Improvement, Harmonics, Electric Motors - Motor Efficiency Computation, Energy Efficient Motors, Illumination – Lux, Lumens, Types of lighting, Efficacy, LED Lighting and scope of Encon in Illumination.

UNIT III**9 Hours****THERMAL SYSTEMS**

Stoichiometry, Boilers, Furnaces and Thermic Fluid Heaters – Efficiency computation and Encon measures. Steam: Distribution &U sage: Steam Traps, Condensate Recovery, Flash Steam Utilization, Insulators & Refractories

UNIT IV**9 Hours****ENERGY CONSERVATION IN MAJOR UTILITIES**

Pumps, Fans, Blowers, Compressed Air Systems, Refrigeration and Air Conditioning Systems – Cooling Towers – D.G. sets

UNIT V**9 Hours****ECONIMICS**

Energy Economics – Discount Rate, Payback Period, Internal Rate of Return, Net Present Value, Life Cycle Costing –ESCO concept .

Total: 45 Hours**Reference(s)**

22OEC01**BASICS OF ANALOG AND DIGITAL ELECTRONICS****3 0 0 3****Course Objectives**

- Understand the working of diodes and transistors in electronic circuits.
- Understand the analog operational amplifier and its applications.
- Understand the implementation of combinational and sequential circuits in digital systems.

Course Outcomes (COs)

1. Apply the diodes and transistors in regulators and amplifiers and analyze their characteristics.
2. Illustrate the working of analog IC with different configurations and its applications.
3. Simplification of Boolean expressions using K-map and implementation of combinational circuits.
4. Analyze the Flip flops and memory configurations in digital circuits.
5. Classify and analyze A/D and D/A converters with its parameters.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
1	2	2	3	1								
2	2	2	3									
3	2	2	3	2								
4	2	2	3	3								
5	2	2	3	3								

UNIT I**9 Hours****SEMICONDUCTORS DEVICES**

Conductor, Semiconductors & Insulators, Semiconductors: intrinsic & extrinsic, energy band diagram - Mobility - Electrons and holes - The P-N junction diode - Zener diode - Avalanche effect- Rectifier Circuits Half wave, Full wave circuits, Efficiency, PIV, Ripple factor and AC and DC current and voltage in rectifier. PNP and NPN Bipolar junction Transistors - H parameters equivalent circuit - Common emitter amplifier - DC behavior: the load slope and the Q point - AC behavior - Emitter follower amplifier - Field effect transistors: JFET and MOSFET.

UNIT II**9 Hours****OPERATIONAL AMPLIFIERS: DC PERFORMANCE**

The operational amplifier - Input resistance, Output resistance, Open loop gain - Bias currents - Offset currents - Offset voltage - Differential mode gain - Common mode gain - Common mode rejection ratio - Negative feedback - Open loop gain and closed loop gain - Inverter amplifier - Non-inverter amplifier - The voltage follower - Transimpedance amplifier (Current to voltage converter) - Differential amplifier. Adders, Subtractors, Comparator, Integrator and Differentiator.

UNIT III**9 Hours****DIGITAL TECHNIQUES: COMBINATIONAL CIRCUITS**

Numbering systems - Binary, octal and hexadecimal numbers - Boole algebra - Conversion and operations - AND gate- OR gate - Inverter - NAND gate - NOR gate - Exclusive OR gate. Morgans laws. Combinational Circuits: Truth tables, logic expressions, Logic simplification using K- map, half and full adder/subtractor, multiplexers, demultiplexers, Logic families :TTL and CMOS.

UNIT IV**9 Hours****DIGITAL TECHNIQUES: SEQUENTIAL CIRCUITS**

Gated Latches & Flip Flops- Level triggered and Edge triggered Flip-Flops, Flop (FF) types: RS type. JK FF. JK FF Master slave. D FF. T FF. Flip Flop Conversion. Shift registers, Counters. Memories Structure: address and data bus. ROM, PROM, EPROM and flash RAM. Volatiles Memories: RAM, SRAM, DRAM. Addressing modes.

UNIT V**9 Hours****DIGITAL TO ANALOG CONVERTERS AND ANALOG TO DIGITAL CONVERTERS**

DIGITAL TO ANALOG CONVERTERS : Input latch. Binary Weighted Resistor Network. R-2R Ladder Resistor Network. Pulse Width Modulation . Resolution. Accuracy. Linearity. Zero Offset. Settling Time. Glitches. ANALOG TO DIGITAL CONVERTERS: Sampling. Real time sampling and equivalent time sampling. Sampling frequency. Sampling theorem (Nyquist). Anti-aliasing filtering. Sampling and holding. Conversion.

Course Objectives

- Understand Series of Microcontrollers in terms of architecture, Programming and Interfacing.
- Learn Programming of PIC series of microcontrollers and learn building of hardware circuits using PIC 16F series of Microcontrollers
- Learn the emerging trends in the design of advanced Microcontrollers.

Course Outcomes (COs)

1. Interpret the components and functionalities of 8051 Microcontrollers.
2. Develop microprocessor applications using the Assembly Language Program
3. Illustrate the working nature of PIC microcontroller on various versions
4. Illustrate the interfacing of different peripherals using PIC Microcontroller
5. Analyze the architecture and instruction set of ARM Microcontroller

Articulation Matrix

1	3	2	1									
2	1	3	1									
3	1	1	2		1							
4	1	1	2		3							
5	1	1	3		2							

UNIT I**9 Hours****8-BIT MICROCONTROLLER**

Introduction-Intel 8051 architecture-Counters and Timers-Serial Interface- Interrupts- Interfacing to external memory and 8255- Instruction set- Address modes.

UNIT II**9 Hours****8051 ALP AND APPLICATIONS**

Assembly language program- Timers and Counters programming- DAC- ADC- Sensor- Keyboard and LCD.

UNIT III**9 Hours****PIC MICROCONTROLLER**

PIC Microcontroller features- PIC Architecture, Program Memory, Addressing Modes, Instruction Set, Instruction Format- Byte-oriented Instructions- Bit-oriented Instructions- Literal Instructions- Control Instructions (CALL & GOTO)- Destination Designator. MPLAB overview: Using MPLAB, Toolbars, Select Development Mode and Device type, Project, Text Editor, Assembler, MPLAB operations.

UNIT IV**9 Hours****PIC HARDWARE**

Reset, Clock, Control registers, Register banks, Program Memory Paging, Ports, Interrupts, Timer and Counter, Watchdog Timer, Power up timer, Sleep mode, I2C bus- A/D converter.

UNIT V**9 Hours****HIGH PERFORMANCE RISC ARCHITECTURE**

ARM: The ARM architecture- ARM organization and implementation- The ARM instruction set- The THUMB instruction set- Basic ARM Assembly Language Program- ARM CPU Cores.

FOR FURTHER READING

Introduction- Architecture- Registers- Memory- Instruction set- Addressing Modes- I/O Pins- Timers- Counters- Interrupts.

22OEC03**PRINCIPLES OF COMMUNICATION SYSTEMS****3 0 0 3****Course Objectives**

- To study the various analog and digital modulation techniques
- To study the various digital communication techniques
- To enumerate the idea of spread spectrum modulation
- To study the design concepts of satellite and optical communication

Course Outcomes (COs)

1. Illustrate the process involved in Amplitude, Frequency and phase modulation systems.
2. Analyze the performance of different digital modulation /demodulation techniques.
3. Analyze Pulse Code Modulation scheme for the transmission of analog data in digital format.
4. Apply the concepts of spread spectrum modulation techniques to eradicate interference in wireless communication.
5. Analyze the system design of satellite and optical communication.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
1	3	2	2									
2	3	2										
3	3	2										
4	2	2	2									
5	3	2										

UNIT I **9 Hours**

FUNDAMENTALS OF ANALOG COMMUNICATION

Principles of amplitude modulation, AM envelope, frequency spectrum and bandwidth, modulation index and percent modulation, AM Voltage distribution, AM power distribution, Angle modulation. FM and PM waveforms, phase deviation and modulation index, frequency deviation and percent modulation, Frequency analysis of angle modulated waves. Bandwidth requirements for Angle modulated waves

UNIT II **9 Hours**

DIGITAL COMMUNICATION

Introduction, Shannon limit for information capacity, Amplitude Shift Keying (ASK), Frequency Shift Keying (FSK) Minimum Shift Keying (MSK), Phase Shift Keying (PSK), BPSK, QPSK, 8 PSK Quadrature Amplitude Modulation (QAM), Bandwidth Efficiency, Comparison of various Digital Communication System (ASK - FSK - PSK - QAM).

UNIT III **9 Hours**

DIGITAL TRANSMISSION

Introduction, Pulse modulation, PCM , PCM sampling, sampling rate, signal to quantization noise rate, companding, delta modulation, adaptive delta modulation, differential pulse code modulation, pulse transmission, Intersymbol interference, eye patterns.

UNIT IV **9 Hours**

SPREAD SPECTRUM AND MULTIPLE ACCESS TECHNIQUES

Introduction, Pseudo-noise sequence, DS spread spectrum with coherent binary PSK, processing gain, FH spread spectrum, multiple access techniques, wireless communication, TDMA and CDMA in wireless communication systems, source coding of speech for wireless communications.

UNIT V **9 Hours**

SATELLITE AND OPTICAL COMMUNICATION

Satellite Communication Systems-Keplers Law, LEO and GEO Orbits, footprint, Link model-Optical Communication Systems-Elements of Optical Fiber Transmission link, Types, Losses, Sources and Detectors.

Total: 45 Hours

Course Objectives

- To understand the concept of data communication and networking models.
- To study the various networking Components and Networks.
- To explore the routing, addressing and security and management aspects of computer networks.

Course Outcomes (COs)

1. Classify the types of computer networks and analyze the seven layers of OSI model.
2. Analyze the basic operations of Routing Algorithms and Routing devices
3. Analyze the local and wide area networking technologies.
4. Apply the ISDN and ATM interface connections in broadband networks.
5. Analyze the security and management techniques related with networks.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
1	1	2	1	1								
2	1	2	2	3								
3	1	1	2	3								
4	1	1	3									
5	1	2	3	3								

UNIT I**9 Hours****NETWORK FUNDAMENTALS**

Types of Computer Networks: by Area, by Topology ; Communication Services: Serial and Parallel, Synchronous and Asynchronous, Simplex and Duplex, Analog and Digital; Speed and Capacity; Multiplexing and Switching; Network Architecture: OSI Seven-Layer Network model.

UNIT II**9 Hours****INTERNETWORKING AND COMPONENTS**

Routing Concepts: Routing Algorithms, RIP, RIP-2, OSPF and other routing Protocols; Switches and Hubs: Store and Forward Switch, Cut-Through Switch, Hybrid Switch, Performance of Switches ; Repeaters; Repeater Vs Hubs; Bridges: Standards, Bridges Vs Repeaters; Routers and Gateways.

UNIT III**9 Hours****LOCAL AND WIDE AREA NETWORKING TECHNOLOGIES**

LAN Components and Topologies; Access Techniques; Transmission Protocols and Media; Ethernet and IEEE 802.3 Networks: History, 10-MBPS Ethernet, Switched Ethernet, 100-MBPS Ethernet, Gigabit Ethernet.

UNIT IV**9 Hours****BROADBAND NETWORKS**

ISDN: Evolution, ISDN Channel and Interface Structures; Broadband ISDN: Basics, Principles and General Architecture; Asynchronous Transfer Mode(ATM): Introduction, Concepts, Components, Connection Supported by ATM network and Concept of Virtual Channel and Virtual Path, Traffic control and Congestion Control, Operation and Maintenance aspects.

UNIT V**9 Hours****NETWORK SECURITY AND MANAGEMENT**

Security: Need of Security, Security Threats, Vulnerabilities, Methods, tools and Techniques for Attacks; Network Security: Levels of Security, Cryptosystems; Data Encryption Standard (DES), Public Key Cryptography, Firewalls; Network Management: Functions and Elements, Distribution of Management; Simple Network Management Protocol (SNMP), Remote Network Management Services.

22OEI01**PROGRAMMABLE LOGIC CONTROLLERS****3 0 0 3****Course Objectives**

- To impart knowledge about automation and architecture of PLC
- To understand the PLC programming using timers, counters and advanced PLC functions
- To familiarize the student with PLC based applications

Course Outcomes (COs)

1. Outline the fundamental Concepts of Automation
2. Conclude the architecture, interfacing and communication techniques of PLC
3. Execute the suitable PLC Programming languages
4. Attribute the various functions and instruction sets of PLC
5. Generate a suitable logical programming for given applications

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

3	2	1		2	2		3							
4	2	1		2	2		3							
5	2	1		2	2		3							

UNIT I

10 Hours

INTRODUCTION TO AUTOMATION

Evolution of automation -Types of automation - Fixed, flexible and programmable automation - Batch process and continuous process - open loop system and closed loop system - Function of sensors - Proximity sensors: Capacitive and Inductive - Infrared and Laser Push-buttons and toggle switches - Actuators: Solenoid valve - servo motor - electromagnetic relays.

UNIT II

9 Hours

ARCHITECTURE OF PLC

Components of PLC - sink and source I/O cards - Processor - Memory: Types of memory, Input and Output modules: Discrete, Analog -Scan time of PLC -Interfacing computer and PLC: RS232, RS485, Ethernet - Selection criteria for PLC.

UNIT III

8 Hours

PLC PROGRAMMING

Programming languages - Ladder logic components: User and bit Instructions, branch instructions, internal relay instruction Boolean logic using ladder logic programming, Latching -Timers: On Delay timer, OFF Delay timer and Retentive timer - Counters: Up Counter and Down Counter.

UNIT IV

10 Hours

ADVANCED PLC FUNCTONS

Instructions in PLC: Program Control Instructions, Math Instructions, Data Manipulation Instructions: Data compare operations, Data transfer operations - Sequencer and Shift register instructions- Analog Instructions: PID Controller - Scaling Instructions.

UNIT V

8 Hours

APPLICATIONS OF PLC

Case Studies: Bottle filling system - Pick and place robot - Car Parking - Traffic light control (4 ways with pedestrian signal) -Elevators - Pneumatic stamping system - alarm annunciator system.

Total: 45 Hours

Course Objectives

- To impart knowledge about various sensors in multidisciplinary engineering domain
- To familiarize students with different applications and its material handling technology
- To understand the concept of sensing circuits and its static and dynamic characteristics

Course Outcomes (COs)

6. Conclude the static and dynamic characteristics of measuring instruments
7. Compare the characteristics and working principles of Resistance, Inductance and Capacitance type sensors
8. Construct the interfacing and signal conditioning circuit for measurement system using different types of sensor
9. Analyze and select the suitable sensor for different industrial applications
10. Combine the modern technologies and smart materials to design various sensors

Articulation Matrix

3	1	2	3	3	1									
4	2	1	1	3	3									
5	1	2	1	2	3									

UNIT I**8 Hours****SENSORS FUNDAMENTALS AND CHARACTERISTICS**

Sensors: Principles of Sensing - Sensor Classification and terminology- Units of Measurements - Measurands- Sensor Characteristics: Static and Dynamic.

UNIT II**8 Hours****PHYSICAL PRINCIPLES OF SENSING**

Electric Charges, Fields, and Potentials; Capacitance; Magnetism; Induction; Resistance; Piezoelectric Effect; Hall Effect; Temperature and Thermal Properties of Material; Heat Transfer; Light; Dynamic Models of Sensor Elements.

UNIT III**9 Hours****INTERFACE ELECTRONIC CIRCUITS**

Input Characteristics of Interface Circuits, Amplifiers, Excitation Circuits, Analog to Digital Converters, Direct Digitization and Processing, Bridge Circuits, Data Transmission, Batteries for Low Power Sensors.

UNIT IV**10 Hours****SENSORS IN DIFFERENT APPLICATION AREA**

Occupancy and Motion Detectors; Position, Displacement, and Level; Velocity and Acceleration; Force, Strain, and Tactile Sensors; Pressure Sensors, Temperature Sensors.

UNIT V**10 Hours****SENSOR MATERIALS AND TECHNOLOGIES**

Materials, Surface Processing- MEMS microsystem components- Microfluidics microsystem components - Nano Technology- Smart Materials.

22OEI03**FUNDAMENTALS OF VIRTUAL INSTRUMENTATION****3 0 0 3****Course Objectives**

- Understand the basic components of Virtual Instrumentation system.
- Learn the developing VIs based on Lab VIEW software.
- To learn to develop applications based on Virtual Instrumentation system.

Course Outcomes (COs)

11. Outline the concepts of traditional instruments and virtual instruments
12. Conclude the overview of modular programming and the structuring concepts in VI programming
13. Attribute the procedure to install DAQ in various OS and its interfacing methods
14. Implement the VI toolsets for specific applications
15. Generate the applications using Virtual Instrumentation software

Articulation Matrix

3	2	2	2	1										
4	3	3	3	1	2					1	2	2		
5	3	2	2	1	2				-	1	2	2		

UNIT I**9 Hours****INTRODUCTION**

Virtual Instrumentation: Historical perspective - advantages - block diagram and architecture of a virtual instrument - Conventional Instruments versus Traditional Instruments - data-flow techniques, graphical programming in data flow, comparison with conventional programming.

UNIT II**9 Hours****VI PROGRAMMING TECHNIQUES**

VIs and sub-VIs, loops and charts, arrays, clusters and graphs, case and sequence structures, formula nodes, local and global variables, State machine, string and file I/O, Instrument Drivers, Publishing measurement data in the web.

UNIT III**9 Hours****DATA ACQUISITION**

Introduction to data acquisition on PC, Sampling fundamentals, Input/output techniques and buses. Latest ADCs, DACs, Digital I/O, counters and timers, DMA, Software and hardware installation, Calibration, Resolution, Data acquisition interface requirements - Issues involved in selection of Data acquisition cards - Data acquisition cards with serial communication - VI Chassis requirements. SCSI, PCI, PXI system controllers, Ethernet control of PXI. Networking basics for office & Industrial applications, VISA and IVI.3

UNIT IV**9 Hours****VI TOOLSETS**

Use of Analysis tools, Fourier transforms, power spectrum, correlation methods, windowing and filtering. Application of VI in process control designing of equipments like oscilloscope, Digital multimeter, Design of digital Voltmeters with transducer input Virtual Laboratory, Web based Laboratory.

UNIT V**9 Hours****APPLICATIONS**

Distributed I/O modules- Application of Virtual Instrumentation: Instrument Control, Development of process database management system, Simulation of systems using VI, Development of Control system, Industrial Communication, Image acquisition and processing, Motion control. Development of Virtual Instrument using GUI, Real-time systems, Embedded Controller, OPC, HMI / SCADA software, Active X programming.

22OEI04**OPTOELECTRONICS AND LASER INSTRUMENTATION****3 0 0 3****Course Objectives**

- To enhance the student knowledge in fiber optics fundamentals and fabrication
- To be recognized with industrial applications of fibers
- To understand the fundamental concepts about lasers
- To identify and describe various fiber optic imaging and optoelectronic sensor applications

Course Outcomes (COs)

1. Attribute the properties of optical fibers, their light sources and detectors.
2. Implement the fiber-optic sensor for the measurement of various physical quantities.
3. Conclude the fundamentals of laser, types of laser and its working.
4. Outline the applications of laser for industrial applications.
5. Differentiate the use of laser instruments for various medical applications.

Articulation Matrix

CONo	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2	3	2	1	2										
3	3	2	1											
4	3	2	2	2										
5	3	2	2	2										

UNIT I

9 Hours

OPTICAL FIBERS AND THEIR PROPERTIES

Introduction to optical fibers - Light guidance - Numerical aperture - Dispersion - Different types of fibers and their properties - Light Sources for fiber optics, Photo detectors, source coupling, splicing and connectors.

UNIT II

9 Hours

INDUSTRIAL APPLICATION OF OPTICAL FIBERS

Fiber optics instrumentation system - optical fiber sensors, Measurement of pressure, temperature, current, voltage and liquid level - fiber optic communication set up - different types of modulators - detectors.

UNIT III

9 Hours

LASER FUNDAMENTALS

Fundamental characteristics of lasers: laser rate equation - three level system - four level system - properties of laser beams - laser modes - resonator configuration - Q-switching and mode locking - cavity dumping - types of lasers: gas lasers, solid state lasers, liquid lasers and semiconductor lasers.

UNIT IV

9 Hours

INDUSTRIAL APPLICATION OF LASERS

Lasers for measurement of distance and length, velocity, acceleration, atmospheric effects, sonic boom, pollutants - material processing: laser heating, melting, welding and trimming of materials - removal and vaporization - calculation of power requirements of laser for material processing.

UNIT V

9 Hours

HOLOGRAM AND MEDICAL APPLICATIONS

Holography: basic principle, methods - holographic interferometry and application, holography for non-destructive - medical applications of lasers, laser and tissue interactive - laser instruments for surgery, removal of tumors of vocal cords, brain surgery, plastic surgery, gynaecology and oncology.

Total: 45 Hours

22OME01

DIGITAL MANUFACTURING

3 0 0 3

Course Objectives

- To understand the process of generating 3D Computer Aided Design (CAD) model by different method.
- To explain the constructional features and develop simple program for CNC lathe and Milling machines.
- To provide an exhaustive knowledge on various generic process and benefits of Additive Manufacturing.
- To familiarize about materials and process parameters of liquid and solid based AM techniques.
- To educate powder based methodology and emerging trends with case studies, applications of AM techniques.

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- m. Design, analyse and evaluate the performance of mechanical systems.
- n. Choose the appropriate methodology, materials, tools and machinery to manufacture quality products at economical cost.

Course Outcomes (COs)

1. Design a 3D model from the 2D data.
2. Develop a CNC program for simple components.
3. Generate stl file and manipulate parameters of AM machine
4. Select appropriate liquid or solid materials based AM process to the respective application
5. Select appropriate process to fabricate a functional/prototype for aerospace, automotive, electronics, manufacturing and medical applications.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO 3

3	2	2	2		2								1	2	
4	2	2	2		2								1	3	
5	2	2	2		2								1	2	

UNIT I

9 Hours

CAD MODELING

Introduction - Design process - Stages. CAD - Input and Output devices, Modeling methods - Wire frame modelling, Surface modelling, Solid modelling - Constructive Solid Geometry and Boundary Representation Techniques. CAD/CAM data exchange - IGES, STEP. Product Life cycle management (PLM).

UNIT II

10 Hours

AUTOMATION AND CNC MACHINES

Introduction to Automation - Definition, types, reasons for automating. CNC Machines - Principles, types, features, advantages, applications. CNC Machine structure - Linear motion bearings, Recirculating ball bearings, drive system, and control system. CNC Lathe and Milling programming - Linear and circular interpolation, threading and drilling programs.

UNIT III

7 Hours

ADDITIVE MANUFACTURING

Introduction - Impact of Additive Manufacturing (AM) and Tooling on Product Development - Distinction between AM and CNC Machining - The Generalized AM Process chain - CAD Model - Input file formats - Generation and Conversion of STL file - File Verification and Repair - Build File Creation - Part Construction - Part Cleaning and finishing - AM Benefits - Classification of AM process

UNIT IV

8 Hours

LIQUID AND SOLID MATERIAL BASED SYSTEMS

Stereo lithography Apparatus (SLA), Digital Light Processing (DLP), Fused Deposition Modelling (FDM) and Laminated Object Manufacturing (LOM) - Working Principle, Construction, Process, Materials and Applications

UNIT V

11 Hours

POWDER BASED PROCESSES AND APPLICATIONS OF ADDITIVE MANUFACTURING

Selective Laser Sintering (SLS), Color Jet Printing (CJP), Electron Beam Melting (EBM) and Laser Engineered Net Shaping (LENS) - Working Principle, Construction, Process Variables, Materials and Applications. Reverse Engineering using 3D scanner. Application of Additive Manufacturing in Medical field, Manufacturing, Automotive industries, Aerospace and Electronics and Retail industries.

INDUSTRIAL PROCESS ENGINEERING

3 0 0 3

Course Objectives

- To impart the knowledge on production planning methodologies and layout design
- To learn about production planning and its control methods
- To provide the knowledge of work study, process charts and ergonomic condition
- To impart the knowledge on inventory control and material handling
- To learn about system analysis and different types of maintenance processes

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- k. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- n. Choose the appropriate methodology, materials, tools and machinery to manufacture quality products at economical cost.

Course Outcomes (COs)

1. Select proper plant layout for the required production system
2. Plan the resources required for the production and to perform the control methods
3. Apply work study method, prepare charts to outline the process and develop ergonomic condition suitable for the processes.
4. Analyze the inventory required based on production needs and material handling
5. Perform system analysis and use different types of maintenance process for smooth operations.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
1	2	3	1		1									2	
2	3	3	1		2						2			2	
3	1	3	3		2									2	
4	2	3	1		2									2	
5	2	3	1		2									2	

UNIT I

9 Hours

INDUSTRIAL ENGINEERING AND PRODUCTION SYSTEM

Industrial engineering - Concept, History and development, Applications, Roles of Industrial engineer- Production management, Industrial engineering versus production management, operations management. Plant layout, Criteria for good layout, Types of layout - Process layout, Product layout, Combination layout and fixed position layout, Flow (material movement) pattern, Workstation Selection and design.

UNIT II

10 Hours

PROCESS PLANNING AND PRODUCTION CONTROL

Introduction to Process planning-Definition, Procedure, Process selection, Machine capacity, Process sheet.Process analysis - Group technology, classification and coding system, formation of component family - Production planning, loading, scheduling. Production control -dispatching, routing - Progress control bar, curve, Gantt chart, route and schedule chart.

UNIT III

8 Hours

WORK STUDY AND ERGONOMICS

Work study - Definition, Need, Advantages, objectives of method study and work measurement, method study procedure, Process chart - symbols, outline process chart, flow process chart, principles of motion economy, ergonomics- applications of ergonomic principles in the shop floor- work benches-seating arrangement, Industrial physiology.

UNIT IV

10 Hours

INVENTORY MANAGEMENT

Inventory control, classification, management, objectives, functions. Economic order quantity, Economic batch quantity, inventory models,ABC analysis, Material Requirement Planning(MRPI), Manufacturing Resource Planning (MRPII), Operating cycle, lean manufacturing, Supply chain management - Material handling.

UNIT V

8 Hours

SYSTEM ANALYSIS AND MAINTENANCE

System concept - system analysis, systems engineering, value engineering, value control, types of values. Plant maintenance - objectives, importance. Maintenance engineer - duties, functions and responsibilities. Types - breakdown, scheduled, preventive and predictive - Plant maintenance schedule, Condition monitoring.

Total: 45 Hours

22OME03

MAINTENANCE ENGINEERING

3 0 0 3

Course Objectives

- To understand the principles, objectives and importance of maintenance adopted in industry for successful progress.
- To introduce different maintenance categories, its merits and types of lubrication.
- To expose the idea of condition monitoring, methods and instruments used for allied measurements.
- To learn about failure analysis and repair methods for few mechanical elements.
- To promote computerization in maintenance and inventory management.

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- f. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- g. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- n. Choose the appropriate methodology, materials, tools and machinery to manufacture quality products at economical cost.

Course Outcomes (COs)

1. Explain the principles, objectives and importance of maintenance adopted in industry.
2. Select the suitable maintenance category and lubrication type.
3. Apply the appropriate methods and instruments for condition monitoring.
4. Analyze the failures of mechanical systems and select suitable repair methods.
5. Utilize computers in maintenance and inventory management.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

3					2	2	1							2	
4	1	2	1		2	2	2							2	
5	2	2	2		1	1	1							2	

UNIT I

9 Hours

PRINCIPLES OF MAINTENANCE PLANNING

Basic principles of maintenance planning - Objectives and principles of planned maintenance activity - Importance and benefits of sound maintenance systems - Maintenance organization - Maintenance economics.

UNIT II

9 Hours

MAINTENANCE CATEGORIES AND LUBRICATION

Maintenance categories - Comparative merits of each category - Preventive maintenance, Maintenance schedules, Repair cycle - Total Productive Maintenance - Principles and methods of lubrication.

UNIT III

9 Hours

CONDITION MONITORING

Condition based maintenance - Cost comparison with and without Condition Monitoring - Methods and instruments for condition monitoring - Noise, vibration, wear and temperature measurement.

UNIT IV

9 Hours

FAILURE ANALYSIS AND REPAIR METHODS

Failure analysis - Failures and their development - Role of Non Destructive Testing in failure analysis - Repair methods for bearings, cylinder block, fuel pump, shaft.

UNIT V

9 Hours

COMPUTER AIDED MAINTENANCE MANAGEMENT

Approach towards Computerization in maintenance - computer-aided maintenance management system (CAMMS) - Advantages of CAMMS - spare parts and inventory centre performance reporting.

FURTHER READING

Retrofitting, objectives, classification of retrofitting, cost effectiveness through retrofitting (economical aspects), circumstances leading to retrofitting, features and selection for retrofitting.

SAFETY ENGINEERING

3 0 0 3

Course Objectives

- To study the principles of safety management system.
- To introduce the provisions contained in the industrial laws.
- To provide knowledge on safety requirements for engineering industry.
- To learn safety requirement for chemical industry.
- To study the various safety measures adopted in construction industries.

Programme Outcomes (POs)

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- f. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- h. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- i. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- j. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- l. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- m. Design, analyse and evaluate the performance of mechanical systems.
- n. Choose the appropriate methodology, materials, tools and machinery to manufacture quality products at economical cost.
- o. Address all the fluid flow and heat transfer related problems of mechanical systems.

Course Outcomes (COs)

1. Explain safety management system of an industry.
2. Implement the provisions of acts and rules in industries.
3. Implement and review the safety performance followed in various industries
4. Evaluate safety appraisal in chemical industries.
5. Generate safety reports on construction industries.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
1					2	1		1						2	2
2					1			3					2	1	
3	2											3	1		2
4	2	3							2				2		1
5					2					3				3	

UNIT I

8 Hours

SAFETY MANAGEMENT

Concepts - Evolution, International Labour Organization (ILO), National Safety Council, Techniques - Job Safety Analysis (JSA), Safety survey, Safety inspection, Safety Sampling, Accident Reporting and Investigation - Concept of an accident, Accident causation models, cost of accident, investigation, Safety Performance Monitoring - Safety indices.

UNIT II

10 Hours

SAFETY AND LAW

Factory Act 1948-Safety and Health chapters, Tamil Nadu Factories Rules- Safety and Health chapters, Environment and Pollution Laws, Building and other construction works act 1996, Electricity Rules.

UNIT III

10 Hours

SAFETY IN ENGINEERING INDUSTRIES

Safety in machine shop,- Principles of machine guarding - Personal protective equipment- Safety in handling industrial gases - Safety in cold forming and hot working of metals- Safety in finishing, inspection and testing, heat treatment, electro plating, leak test, radiography.

UNIT IV

9 Hours

SAFETY IN CHEMICAL INDUSTRIES

Safety in process design, unit operations, pressure vessel, heat exchanger, safety valves -Plant commissioning and inspection, pressure vessel, Plant maintenance and emergency planning, management of maintenance HAZOP study.

UNIT V

8 Hours

SAFETY IN CONSTRUCTION INDUSTRY

Construction regulations, contractual clauses, permit to work, - Education and training-Hazards of construction and prevention- excavation, scaffolding, dismantling, road works, construction of high rise buildings - Working at heights,-Working on fragile roofs, work permit systems-Construction machinery, cranes, chain pulley blocks, earth moving equipment, conveyors- Manual handling, Safety in demolition work, - Safety in confined spaces

FOR FURTHER READING

Case Studies- Major accidents at Flixborough, UK, Seveso, Italy, Victoria Dock, India, Bhopal, India.

Total: 45 Hours

22OBT01

BIOFUELS

3 0 0 3

Course Objectives

- To understand and explore the scope of biofuels the most efficient renewable source of energy.
- To develop the expertise in the technology pertaining to their generation and employment in order to surrogate the existing conventional fuels and hence strives towards sustainable development
- To give way to the bolster green technology and incline towards more ecofriendly options.

Course Outcomes (COs)

1. Apply the bioresources that can be used for the production of biofuels.
2. Analyze the physical and chemical properties of the biodiesel.
3. Analyze the mechanisms of improvising the quality and performance of engines using biofuels
4. Analyze the bio-fuel conversion technologies and their environmental attributes
5. Evaluate the designing aspects of major unit processes/operations of an integrated bio-refinery

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
1	1		2				3								1
2	2						1								3
3	1						3								2
4	2						3								3
5	1						1								

UNIT I **9 Hours**

CLASSIFICATION AND RESOURCES

Introduction, biofuel as a renewable energy, classification of biofuels - First, second, third and fourth generation biofuels, different plant sources as biofuel feed stocks, Biogases, physical and chemical characteristics of vegetable oils - iodine number, hydroxyl, acid values, rancidity, hydrogenolysis and hydrolysis, Food vs energy.

UNIT II **9 Hours**

BIODIESEL

Definition, basics and chemistry of biodiesel, vegetable oils in biodiesel production, Trans esterification: Chemical methods, enzymatic methods and types of catalysts, separation and purification, physical properties and characterization of biodiesel - Cloud point, pour point, cold filter plugging point, flash point, viscosity and cetane number.

UNIT III **9 Hours**

QUALITY BIODIESEL AND ENVIRONMENT

Producing Quality Biodiesel, quality control, test methods, ASTM specifications. Oxidative and thermal stability, estimation of mono, di, triglycerides and free glycerol, engine performance test, blending of ethanol with biodiesel, blending of biodiesel with high-speed diesel (HSD) and their combustion properties.

UNIT IV **9 Hours**

BIO ETHANOL AND BIO GASES

Ethanol as a fuel, microbial and enzymatic production of ethanol from biomass –ligno celluloses, sugarcane, sugar beet, corn, wheatstarch, purification-wet and dry milling processes, saccharification-chemical and enzymatic. Production of bio methane and bio hydrogen.

UNIT V **9 Hours**

BIO REFINERIES

Definition and types of biorefineries, co-products of biorefineries-oil cake and glycerol, purification of glycerol obtained in biodiesel plant; anaerobic and thermal gasification of biomass, economics of biorefineries.

Total:45Hours

Course Objectives

- Understand the importance of traditional foods and food habits
- Know the traditional processing of snack, sweet and dairy food products
- Infer the wide diversity and common features of traditional Indian foods and meal patterns.

Course Outcomes (COs)

1. Justify the processing methods of traditional foods in terms of its health benefits
2. Assess the production methods of traditional sweets, snacks and dairy products
3. Differentiate Traditional fermented foods products based on its raw material
4. Implement a large scale production of tradition foods for its increased consumption
5. Compare the health aspects of traditional foods with modern foods

Articulation Matrix

1	1													
2		1												
3	2	1	1											
4								2						
5								2						

UNIT I**9 Hours****TRADITIONAL METHODS OF FOOD PROCESSING**

Introduction - food culture -geographical features and food. Traditional methods of milling grains - rice, wheat and corn - equipment and processes as compared to modern methods. Equipment and processes for edible oil extraction- comparison of traditional and modern methods. Energy costs, efficiency, yield, shelf life and nutrient content comparisons. Traditional methods of food preservation - sun-drying, osmotic drying, brining, pickling and smoking.

UNIT II**9 Hours****TRADITIONAL SWEETS, SNACKS AND DAIRY PRODUCTS**

Production, formulation, preparation and processing of Indian traditional sweet and snack food products:- Rasgolla, Gulabjamun; formulation and preparation of namkeen, potato chips, banana chips. Acid coagulated and fermented dairy products- paneer, dahi, shrikhand, lassi - processing conditions, defects etc. Fat rich products- Butter, ghee and its processing.

UNIT III**9 Hours****TRADITIONAL FERMENTED FOOD PRODUCTS**

Idli, Soya sauce, fish pickle, dry fish, meat and vegetable fermented products. Various alcohol based products. Ways to increase nutritional quality of food such as enrichment, fortification, fermentation and mutual supplementation. Best cooking and processing methods to retain nutrients

UNIT IV**10 Hours****COMMERCIAL PRODUCTION OF TRADITIONAL FOODS**

Commercial production of traditional breads, snacks, ready-to-eat foods and instant mixes, frozen foods - types marketed, turnover; role of SHGs, SMES industries, national and multinational companies; commercial production and packaging of traditional beverages such as tender coconut water, neera, lassi, buttermilk, dahi. Commercial production of intermediate foods - ginger and garlic pastes, tamarind pastes, masalas (spice mixes), idli and dosa batters

UNIT V**8 Hours****HEALTH ASPECTS OF TRADITIONAL FOODS**

Comparison of traditional foods with typical fast foods / junk foods - cost, food safety, nutrient composition, bioactive components; energy and environmental costs of traditional foods; traditional foods used for specific ailments /illnesses.

Total: 45 Hours**Reference(s)**

22OFD02**FOOD LAWS AND REGULATIONS****3 0 0 3****Course Objectives**

- Introduce the concept of food hygiene, importance of safe food and laws governing it
- Learn common causes of food borne illness - viz. physical, chemical and biological and identification through food analysis
- Understand food inspection procedures employed in maintaining food quality

Course Outcomes (COs)

1. Analyse the food safety strategies and nutritional quality of the food
2. Check the food regulatory mechanism and mandatory laws for food products
3. Determine the national and international regulatory agencies
4. Understand and apply the voluntary regulatory standards
5. Assess the implementation of food safety for a food processing industry

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	1	2	1											
2		1				1	2	1						
3		1												
4	1	2												
5	1	2												

UNIT I

10 Hours

INTRODUCTION

Introduction, concept of food safety and standards, food safety strategies. Food hazards and contaminations - biological (bacteria, viruses and parasites), chemical (toxic constituents / hazardous materials) pesticides residues / environmental pollution / chemicals) and physical hazards. Preventive food safety systems - monitoring of safety, wholesomeness and nutritional quality of food. Prevention and control of physical, chemical and microbiological hazards. Principles of food safety - Establishment: design and facilities - emergency preparedness - Maintenance cleaning and sanitation - personal hygiene - packaging and labelling - transportation - traceability - recall procedure - visitor policy. Adulteration: Intentional and unintentional - Preservatives - antioxidants, sweeteners, flavours, colours, vitamins, stabilizers - indirect additives - organic residues - inorganic residues and contaminants.

UNIT II

10 Hours

FOOD LAWS

Indian and Food Regulatory Regime (Existing and new), PFA Act and Rules, Food Safety and Quality Requirements, Additives, Contaminants and Pesticide Residue. Food Safety and Standards Act, 2006, FSSAI roles and responsibilities, Essential Commodities Act, 1955, Global Scenario, Codex Alimentarius, WHO/FAO Expert Bodies (JECFA/ JEMRA/JMPR) WHO/FAO Expert Bodies (JECFA/ JEMRA/JMPR). Food safety inspection services (FSIS) and their utilization.

UNIT III

10 Hours

REGULATIONS

Introduction to OIE & IPPC, Other International Food Standards (e.g. European Commission, USFDA etc). WTO: Introduction to WTO Agreements: SPS and TBT Agreement, Export & Import Laws and Regulations, Export (Quality Control and Inspection) Act, 1963. Role of Agricultural and Processed Food Products Export Development Authority (APEDA), Customs Act and Import Control Regulations, Other Voluntary and mandatory product specific regulations, Other Voluntary National Food Standards: BIS Other product specific standards; AGMARK. Nutritional Labelling, Health claims.

UNIT IV

10 Hours

STANDARDS

Voluntary Quality Standards and Certification GMP, GHP, HACCP, GAP, Good Animal Husbandry Practices, Good Aquaculture Practices ISO 9000, ISO 21000, ISO 14000, ISO 17025, PAS 21000, FSSC 21000, BRC, BRCIOP, IFS, SQF 1000, SQF 2000. Role of NABL, CFLS.

UNIT V

5 Hours

IMPLEMENTATION AND RISK ASSESSMENT

Implementation of food safety for a desired food processing industry. Risk assessment studies: Risk management, risk characterization and communication.

Total: 45 Hours

Reference(s)

1. Singal RS (1997). Handbook of indices of food quality and authenticity. Woodhead Publ. Cambridge, UK.

22OFD03

POST HARVEST TECHNOLOGY OF FRUITS AND VEGETABLES

3 0 0 3

Course Objectives

- To understand the importance and different methods of post harvest handling and storage of fruits and vegetables.
- To gain knowledge on different preservation methods of fruits and vegetables
- To familiarize with the value added products from fruits and vegetables

Course Outcomes (COs)

1. Implement the different post harvest handling practices for the storage of fruits and vegetables
2. Analyze the suitable preservation method (sugar, salt or dehydration) to produce value added products from fruits and vegetables
3. Evaluate the requirement of low temperature and irradiation methods to preserve specific fruits and vegetables
4. Apply the concentration and fermentation methods to preserve fruits and vegetables
5. Implement the canning method to preserve fruits and vegetables

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	1	1	2	1			1							
2	1	1												
3	1	2												
4	1		1											
5	2	1	1											

UNIT I **9 Hours**

POST-HARVEST PRACTICES AND PROCESSING

Maturity indices for harvesting; pathological spoilage's during storage, ripening and control measures, Post-harvest handling, sorting & grading, packaging, storage, transportation, Methods of pre-cooling, post-harvest treatments to hasten and delay ripening; Methods of storage at farm level - cold storage, controlled/modified atmosphere storage, Quality management, export requirements, Nutritive value, nutraceutical properties

UNIT II **9 Hours**

PRESERVATION AND VALUE ADDITION

General principles and methods of fruit and vegetable preservation. Preservation using sugar: Principle and Preparation of jam, jelly, marmalade, squash, RTS, carbonated beverages, crush, nectar, cordial, fruit bar, preserves, candies and carbonated fruit beverages. Processing using salt: Principle - Brining - Preparation of pickles, chutney and sauces, ketchup.

UNIT III **9 Hours**

PRESERVATION BY LOW TEMPERATURE AND IRRADIATION

Preservation by low temperature: definition, principle, methods - Refrigeration, freezing. Methods of freezing - changes during freezing. Preparation of frozen foods. Minimal Processing of Fruits and Vegetables - techniques involved - Preservation by irradiation: definition- principle, application, irradiation unit.

UNIT IV **9 Hours**

PRESERVATION BY DRYING

Machineries involved in processing of fruits and vegetables products. Drying and dehydration: definition, principle, Types of driers: Solar, cabinet, spray drier, drum drier, fluidized bed drier. Preparation of product for dehydration. Dehydration principles and equipment. Preparation of fruits - powder production. Problems related to storage of dehydrated products.

UNIT V **9 Hours**

PRESERVATION BY CANNING

Canning: principles, Types of cans, packing of canned products-preparation of canned products - general considerations in establishing a commercial fruit and vegetable cannery, machineries involved in canning and bottling unit- spoilage of canned foods. Bottling of fruit and vegetable. Precautions in canning operations.

Total: 45 Hours

6. D.K. Salunkhe, and S.S. Kadam, Handbook of Fruit Science and Technology: Production, Composition and Processing, Marcel Dekker, New York, 1995.

Course Objectives

- Understand the application of scientific principles in the processing technologies specific to the materials
- Understand the storage methods and handling techniques followed for cereals, pulses and oil seeds
- Develop the knowledge in the area of Cereals, pulses and oil seed processing and technology

Course Outcomes (COs)

1. Identify the specific processing technologies employed for cereals
2. Analyse the composition of millets and their nutritional importance
3. Relate the compositional changes and processing methods of pulses and legumes
4. Create the competence in processing of oilseeds technology
5. Relate the storage processing of food grains with quality aspects

Articulation Matrix

4	2	3		2		2								2
5	2	2		2		3								

UNIT I**9 Hours****CEREALS**

Cereal Grains- Basic agricultural aspects, structure and composition; Storage, Insect control; Processing: Wheat- milling, (Atta and maida), quality aspects of flour, wheat proteins and their function, rheology of flour; wheat based baked products - Bread, Biscuit, Cakes, Extruded products, Pizza, Chapatis, malting and malt products; Rice-Milling, Parboiling, Quick cooking rice, Traditional Indian Products- Puffed Rice, flaked rice, Idli/Dosa/vada mixes and other savouries; Corn- Wet and dry milling, Corn Products - Corn flakes, Corn starch, canned corn products, puffed product; Oats-Milling, Oat Products - Steel cut, rolled oats, quick cooking; Traditional and Fermented cereal products.

UNIT II**9 Hours****OTHER CEREALS AND MILLETS**

Sorghum, Pearl Millet, Finger millet, Foxtail Kodo Millet - Basic agricultural millet, aspects, structure and composition; storage, insect control; processing - pearling, Milling, Malting, Malt based foods, flaked and fermented products; Traditional and Nutritional products based on finger millet.

UNIT III**9 Hours****PULSES AND LEGUMES**

Basic agricultural aspects, structure, composition, storage, insect control, processing Milling/splitting, dhal milling, products - puffed, flakes, flour, legume-based traditional products, flour based Indian sweets and savouries, soya milk, soya protein Isolate, soya paneer

UNIT IV**9 Hours****OIL SEEDS AND NUTS**

Basic agricultural aspects structure, composition, Storage, Insect control; processing: traditional and modern methods of oil extraction, refining, bleaching, deodorizing, hydrogenation; oil blends; applications of different oils and fats in food processing & products.

UNIT V**9 Hours****STORAGE AND HANDLING**

Bag Storage - Advantages and Disadvantages, Cover Plinth Storage Structures, CAP storage (Cover and Plinth Storage). Protection against Rodents, Fungi, Pests and Mites. Fumigation Processes for bag storage piles. Bulk Storage in silos and large Bins. Conveyors and Elevators for feeding and discharging.

22OFT01**FASHION CRAFTSMANSHIP****3 0 0 3****Course Objectives**

- To impart theoretical and practical knowledge about various handi-craft techniques
- To enhance innovative skills on hand crafts.
- To build confidence on doing handicrafts.

Course Outcomes (COs)

1. Outline the classification, techniques and criteria for selecting raw materials for making various handicraft materials and produce textile based handicrafts. Produce various decorative and appealing products
2. Design and construct various wall hangings and fashion accessories.
3. Design and construct toys and accessories
4. Design and construct head accessories, home furnishings and paintings
5. Design and construct various decorative and appealing products for interiors

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

4	3	2	3				2		2	3		2	2	
5	3	2	3				2		2	3		2	2	

UNIT I

9 Hours

TECHNIQUES OF HANDICRAFT MATERIALS

Definition of Handicraft, Classification: Reusable, Non reusable, Raw materials used in various craft materials: printed, embroidered, stitched and handmade, Criteria for selection of raw materials: material types and end uses.

UNIT II

9 Hours

DECORATIVE AND APPEALING PRODUCTS - INTERIORS

Designing and Construction procedures for following various decorative and appealing products: Wall hangings - String Art on plywood, Pressed Flower Art frames.

UNIT III

9 Hours

DECORATIVE AND APPEALING PRODUCTS - ACCESSORIES

Designing and Construction procedures for following various decorative and appealing products: Handbags, Hats, footwear.

UNIT IV

9 Hours

DECORATIVE AND APPEALING PRODUCTS - ORNAMENTS

Designing and Construction procedures for following various decorative and appealing products: Stone necklace using Macrame Technique, Tribal Jewellery using woollen threads, Floral Jewellery using Resin Technique, Fabric Jewellery using Tie and Dye Technique.

UNIT V

9 Hours

DECORATIVE AND APPEALING PRODUCTS - FANCY ITEMS

Designing and Construction procedures for following various decorative and appealing products: Jewellery Box, Utility Holder, Gift items. Lampshade decors from cardboard, Driftwood Frames for pictures and Mirrors.

Total: 45 Hours

Course Objectives

- To impart knowledge on interior design.
- To improve the design skills, sustainable with socially-conscious designs

Course Outcomes (COs)

1. Interpret the elements of interior design concepts and resolve the personality requirements
2. Develop graphical representations of interior design concepts
3. Resolve the space planning requirements of residential home as per CPWD guidelines
4. Determine the aesthetic requirements of interior design components.
5. Appraise the roles and responsibilities of interior designer.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	3	2	3		-	1							2	
2	3	2	3		2	3		2					3	
3	3	3	3		2	2		2					2	
4	3	3	3		2	3		2					2	
5	3	2			2			3					3	

UNIT I**9 Hours****INTRODUCTION**

Interior designing - definition, importance, requirements and types - Structural design, Decorative Design - Designing interiors, Good taste; Design themes, types and application. Personality of the Home - Art elements - Line: types, characteristics and importance; form: size and shape, characteristics; Colour - sources, qualities, emotional effects, colour wheel and schemes.

UNIT II**9 Hours****GRAPHICAL PRESENTATIONS**

3D composition; Isometric and Axonometric- Still life- Furniture Sketching- Object Drawing with color rendering - Interior elements, Lighting, plants. Perspective, Axonometric Isometric drawing. Orthographic Projection - Lifts and escalators.

UNIT III**9 Hours****SPACE PLANNING**

Space planning concepts- interiors, circulation. Definition, application of ergonomic principals in interiors. Residential house space planning case study- CPWD guidelines. Lighting for different locations and activities, measurement, ventilation and indoor air quality, noise control methods.

UNIT IV**9 Hours****INTERIOR COMPONENTS**

Application of colour in interiors; Texture - types and significance; Pattern: types and effects; Light - importance. Importance of Furniture Design for Interiors- Ancient Age / Middle Age / Contemporary.

Doors, Windows, Staircase designs, False Ceiling, Partitions, Wall Panelling, Comics, Mosaic, Cladding- Flooring and Wall Cladding

UNIT V

9 Hours

ROLES AND RESPONSIBILITIES OF INTERIOR DESIGNER

Role of an Interior Designer- Responsibility towards society and need of an Interior Designer to better the environment- Ethics and Code of Conduct- Responsibility towards client, contractor and supplier, Estimation. Professional Fees- Work of an Interior Designer- Making of portfolio, JD Annual Design Awards.

SURFACE ORNAMENTATION

3 0 0 3

Course Objectives

- To familiarize the students about the various techniques of surface embellishment with relevance to garment embellishments.
- To aware of various types of embroidery and methods of producing it.
- To make the students confident about doing surface embellishment work

Course Outcomes (COs)

1. Analyze the raw material requirements for surface ornamentation and its application
2. Implement hand embroidery stitches on fabric and show the stitch development procedure in diagrammatic representations
3. Apply the machine and computerized embroidery stitches
4. Analyze the surface embellishment techniques and its application
5. Assess the quality maintenance parameters of all embroidered products and analyze the 6 traditional embroidery techniques

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2	3	2					1						
2	2	3	2						2				2	2
3	2	3	2		3								2	2
4	2	2	2						2				2	2
5	2	2	2						2					2

UNIT I

9 Hours

INTRODUCTION TO SURFACE ORNAMENTATION

Introduction, Definition, Need, Types, Raw materials, Importance of surface ornamentation, Selection of needle, thread and fabric for hand embroidery and machine embroidery. various methods of surface embellishment- embroidery and surface ornamentation.

UNIT II

9 Hours

HAND EMBROIDERY

General rules for hand embroidery. Types of hand embroidery stitches-Running, Couching, Button hole, Satin, Long & Short, Wheat, Chain, Stem, Herringbone, Cross stitch, Knotted stitches, Fish bone, Fly stitch, Braids, Back, Hem, Seed, Needle weaving, Whip stitches.

UNIT III

9 Hours

MACHINE EMBROIDERY

General rules for machine embroidery. Types of frames and methods of transferring the designs. Attachments to sewing machines for embroidery, Types of machine embroidery stitches- Eyelet work, Cut work, patch work, Mirror work, Applique, Shaded embroidery, Shadow work, Bead and Sequins work, Vermicelli, Zigzag, Granite stitch. Computerized embroidery machine- Concept of design and development, software used in embroidery machines, process of designing, method and types of stitch application, punching and digitizing.

UNIT IV

9 Hours

EMBELLISHMENT TECHNIQUES

Materials used and Applications. Types of embellishment techniques- fabric painting-hand, Stencil-dabbing and Spraying. Dyeing and printing-advanced tie and dye techniques, batik and block printing. Trimmings and decorations-Laces, Pompons, Fringes, Tassels, Tucks, Show buttons, Crocheting.

UNIT V

9 Hours

TRADITIONAL EMBROIDERIES OF INDIA AND CARE

Care and maintenance of embroidered articles-care and maintenance methods for embroidered apparel, pressing. Traditional Embroideries of India-Phulkari, Kasuti, Kashmiri embroidery, Kutch work, Chikkankari, Kantha.

Total: 45 Hours

NANOMATERIALS SCIENCE

3 0 0 3

Course Objectives

- Impart knowledge on Nanoscience
- Explore different techniques of producing nanomaterials
- Create expertise on the applications of nanomaterials in various fields

Course Outcomes (COs)

1. Summarize the origin and advance of nanomaterials and its classification
2. Compare the different types of methods adopted for synthesizing nanomaterials
3. Analyze the characterization techniques for analyzing nanomaterials
4. Explain the physical properties exhibited by nanomaterials
5. Organize the nanomaterials developed for advanced technological applications

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO 2
1	1	1												
2	2	2												
3	3	1												
4	1	1												
5	2	3												

UNIT I

9 Hours

NANO SCALE MATERIALS

Introduction-Feynman's vision-national nanotechnology initiative (NNI) - past, present, future -classification of nanostructures, nanoscale architecture - effects of the nanometer length scale - changes to the system total energy, and the system structures- effect of nanoscale dimensions on various properties -differences between bulk and nanomaterials and their physical properties.

UNIT II

9 Hours

NANOMATERIALS SYNTHESIS METHODS

Top down processes - mechanical milling, nanolithography and types based on radiations - Bottom up process physical method: physical vapour deposition, RF sputtering, CVD- chemical method: colloidal and sol-gel methods - template based growth of nanomaterials - ordering of nanosystems, self-assembly and self-organization.

UNIT III**9 Hours****CHARACTERIZATION TECHNIQUES**

General classification of characterization methods - analytical and imaging techniques - microscopy techniques - electron microscopy, scanning electron microscopy, transmission electron microscopy, atomic force microscopy - diffraction techniques - X-ray spectroscopy - thermogravimetric analysis of nanomaterials.

UNIT IV**9 Hours****SEMICONDUCTOR NANOSTRUCTURES**

Quantum confinement in semiconductor nanostructures - quantum wells, quantum wires, quantum dots, super lattices-epitaxial growth of nanostructures-MBE, metal organic VPE, LPE - carbon nano tubes- structure, synthesis and electrical properties -applications- quantum well laser- quantum efficiency of semiconductor nanomaterials

UNIT V**9 Hours****NANOMACHINES AND NANODEVICES**

Microelectromechanical systems (MEMS) and Nanoelectromechanical systems (NEMS)-fabrication, actuators-organic FET- principle, description, requirements, integrated circuits- single electron transistor - - organic photovoltaic cells- spintronics

Total: 45 Hours**Reference(s)**

6. Viswanathan B, Aulice Scibioh M, "Fuel cells: Principles and Applications", University Press, 2009.

Course Objectives

- Impart knowledge in physical properties of semiconducting materials
- Analyze the factors affecting the operation of semiconductor devices
- Apply the physics of semiconductors to develop semiconductor devices

Course Outcomes (COs)

1. Exemplify the band gap, drift and diffusion current densities due to carrier transport in semiconductors
2. Analyze the energy band diagram in thermal equilibrium and space charge width of PN junction
3. Illustrate the operation of Bipolar Junction transistor at different modes and different configurations
4. Illustrate the operation of metal oxide field effect transistor and their memory devices
5. Represent the working mechanism of opto-electronic devices

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2	1												
2	2	1												
3	2	1												
4	2	1												
5	2	1												

UNIT I**9 Hours****ENERGY BANDS AND CARRIER TRANSPORT PROPERTIES**

Energy Bands: Formation of energy bands - doping effects - energy levels - electron and hole concept in semiconductor. Carrier transport: Carrier drift-drift current density - conductivity- diffusion current density - total current density

UNIT II**9 Hours****P-N JUNCTION**

Basic structure and fabrication process of p-n junction - current - voltage characteristics - energy band diagram - equilibrium Fermi levels - depletion region - junction breakdown phenomena - zener - avalanche breakdown.

UNIT III**9 Hours****BIPOLAR JUNCTION TRANSISTOR**

The basic transistor action - operation in the active mode - current gain - static characteristics - carrier distribution in emitter, base and collector region - modes of operation - current - voltage characteristics of common base and emitter configuration - frequency response and switching of bipolar transistor

UNIT IV**9 Hours****MOSFET**

The ideal MOS diode - basic fundamentals and characteristics - types - CMOS and BiCMOS - CMOS inverter - MOSFET on insulator - thin film transistor (TFT) - silicon on insulators (SOI) devices - MOS Memory structures - DRAM and SRAM

UNIT V**9 Hours****PHOTONIC DEVICES**

Radiative transitions and optical absorption-light emitting diodes-organic LED - infrared LED - semiconductor laser - temperature effect - photo detector - photo diode - silicon and compound semiconductor solar cells - efficiency

Total: 45 Hours**Reference(s)**

22OPH03**APPLIED LASER SCIENCE****3 0 0 3****Course Objectives**

- Impart knowledge on laser science
- Explore different strategies for producing lasers
- Create expertise on the applications of lasers in various fields

Course Outcomes (COs)

1. Illustrate the transition mechanisms and the components of a laser system
2. Compare the different types of lasers based on pumping method, active medium and energy levels
3. Compute the rotation of earth, velocity and distance using lasers and apply the same for day today applications
4. Analyze the role of lasers in surgical and endoscopy applications
5. Apply the laser techniques in industrial applications

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2	1												
2	1	2												
3	2	1												
4	2	1												
5	1	2												

UNIT I**9 Hours****LASER FUNDAMENTALS**

Introduction - principle - absorption and emission of light - thermal equilibrium - Einstein's prediction - Einstein's relations - A and B coefficients - condition for large stimulated emission - spontaneous and stimulated emission in optical region - light amplification - condition for light amplification - population inversion- Components of lasers - pumping methods - pumping mechanisms - optical resonator

UNIT II**9 Hours****LASER BEAM CHARACTERISTICS AND TYPES**

Characteristics of laser - Classification of lasers - principle, construction, working, energy level diagram and applications of molecular gas laser (CO₂ laser) - liquid laser (dye laser) - excimer laser - Solid state laser (Nd:YAG laser) - semiconductor laser (homojunction laser).

UNIT III**9 Hours****LASERS IN SCIENCE**

Introduction - Harmonic generation (SHG) - Stimulated Raman emission - lasers in chemistry - laser in nuclear energy - lasers and gravitational waves - rotation of the earth - measurement of distance - Light detection And Ranging (LIDER) - velocity measurement - holography

UNIT IV**9 Hours****LASERS IN MEDICINE AND SURGERY**

Light induced biological hazards: Eye and skin - Eye laser surgery - photocoagulations - homeostasis - dentistry - laser angioplasty - different laser therapies - advantages & disadvantages - laser endoscopy.

UNIT V**9 Hours****LASERS IN INDUSTRY**

Applications in material processing: laser welding - hole drilling - laser cutting - Lasers in electronics industry: information storage - bar code scanner- Lasers in defence: laser based military weapons - laser walls.

Total: 45 Hours

22OPH04**BIO-PHOTONICS****3 0 0 3****Course Objective:**

- To understand the light-matter interaction in biological cells or tissues by using the principles of optics and lasers.
- To apply the properties of biological cells or tissues in biomedical applications by various optical imaging, sensing and activation techniques.
- To analyze the concepts of Modern optical measurement techniques and devices in early detection of disease and cure them.

Course Outcomes (COs)

1. Infer the laws of optics and lasers to interpret the biological cells and tissues.
2. Identify the properties of different optical instruments in biological systems to represent their behavior in structure and design of detection engineering instruments.
3. Use laser tweezers techniques to infer the activities of cells (tissues) and explain the single molecule detection processes in medical diagnosis.
4. Outline the properties of ultra short laser pulses and tissue engineering to rectify the affecting factors in biological cells.
5. Compare the various types of bio-imaging methods to detect the infected cells and molecules in biological science.

Articulation Matrix

1	3	2												
2	3	2												
3	3	2							3					
4	3	2							3					
5	3	2												

UNIT I **9 Hours**

INTRODUCTION TO BIOPHOTONICS

Light as Photon Particles – Coherence of light - lasers – classification of lasers – Mechanisms of Non-linear Optics (NLO) processes associated with Biophotonics - Light scattering mechanisms: Rayleigh scattering, Miescattering, Brillouin Scattering, Raman Scattering -Different light sources – Quantitative description of light: Radiometry

UNIT II **9 Hours**

PHOTOBIOLOGY

Interaction of light with cells and tissues – Light – Tissue Interaction Variables – Light –Tissue Interaction Theory: Radiative Transport Theory – Photo process in biopolymers – In Vivo Photoexcitation – photo-induced physical, chemical, thermal and mechanical effects in biological systems – Optical biopsy – Single molecule detection

UNIT III **9 Hours**

BIO-NANO-PHOTONICS

Laser Microtools, Semiconductor quantum dots for bioimaging, Metallic nanoparticles and nano rods for biosensing– Optical biosensors: Fibre-Optic, evanescent wave, surface Plasmon resonance (SPR) based biosensors – biomaterials for photonics – Principle and design of laser tweezers – laser trapping and dissection for biological manipulation.

UNIT IV **9 Hours**

TISSUE ENGINEERING WITH LIGHT

Basics of tissue optics: Light absorption and scattering in tissues, Wavelength effects and spectra– the therapeutic window, Light penetration in tissues – Absorbing agents in tissues and blood – Skinoptics, response to the UV radiation, Optical parameters of tissues – tissue welding – tissue contouring – tissue regeneration – Femto laser surgery – low level light therapy and photo dynamic therapy

UNIT V **9 Hours**

BIO-IMAGING TECHNIQUES AND ITS APPLICATIONS

An overview of optical imaging – Fluorescence Microscopy – Scanning Microscopy – In vivo Confocal Microscopy – Multi photon Microscopy – Optical Coherence Tomography (OCT) – Fluorescence Resonance Energy Transfer (FRET) imaging – fluorescence lifetime imaging Microscopy (FLIM) – Nonlinear optical imaging – Coherent Anti-stokes Raman Scattering – Bioimaging Applications.

PHYSICS OF SOFT MATTER

3 0 0 3

Course Objectives

- To recognize the properties of soft matter and hard matter
- To understand the fundamental interactions of colloids and gels
- To explain the structure and phase behavior of liquid crystals and supramolecules
- To summarize the soft matter properties of structures and components of life

Course Outcomes (COs)

1. Identify the salient features of soft matter and hard matter
2. Exemplify the fundamental interactions and stability of colloids and gels
3. Illustrate the structure and properties of liquid crystals
4. Outline the aggregation and phase behavior of surfactants, polymers, copolymers and block copolymers
5. Analyze the soft matter behavior of nucleic acids, proteins, polysaccharides and membranes

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2	1												
2	2	1												
3	2	2												
4	2	2												
5	2	2												

UNIT I

9 Hours

CONDENSED MATTER

Intermolecular forces-Condensation and freezing-mechanical response: Hookean solid-Newtonian liquid-viscoelasticity. Glasses: relaxation time-viscosity- glass forming liquids. Soft matter: length scales-fluctuations and Brownian motion

UNIT II **9 Hours**

COLLOIDAL DISPERSIONS & GELS

Forces between colloidal particles: vander Waals forces-electrostatic double layer forces-steric hindrance-depletion interactions. Stability and phase behaviour: Crystallisation-strong colloids-weak colloids.Physical and chemical gels-classical theory of gelation-elasticity of gels

UNIT III **9 Hours**

LIQUID CRYSTALS

Liquid crystal phases-distortions and topological defects-electrical and magnetic properties-polymer liquid crystals-Fredricks transition and liquid crystal displays

UNIT IV **9 Hours**

SUPRAMOLECULAR SELF ASSEMBLY

Aggregation and phase separation-types of micelles- bilayers and vesicles. Phase behaviour of concentrated surfactant solutions-phase separation in polymers, copolymers and block copolymers

UNIT V **9 Hours**

SOFT MATTER IN NATURE

Components and structures of life-Nucleic acids-proteins-interaction between proteins-polysaccharides-membranes

Total: 45 Hours

22OCH01

CORROSION SCIENCE AND ENGINEERING

3 0 0 3

Course Objectives

- Analyse the loss incurred due to corrosion in different sectors and terminologies related to corrosion
- Identify forms and types of corrosion with suitable mechanism
- Apply various methods of corrosion control, corrosion testing and monitoring

Course Outcomes (COs)

1. Explain if corrosion can occur under specific operating conditions in a given equipment or construction and indicate regions of immunity, corrosion and passivity of a metal
2. Compare different corrosion types on metals when exposed to air, water and at high temperatures (> 100 C)
3. Identify the corrosion mechanism on steel, iron, zinc and copper metal surfaces

4. Calculate the rate of corrosion on metals using electrochemical methods of testing
5. Propose the correct materials, design and operation conditions to reduce the likelihood of corrosion in new equipment and constructions

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2	1												
2	2						1							
3	1	3												
4	2	2												
5	3	3					1							

UNIT I 9 Hours

CORROSION

Importance of corrosion - spontaneity of corrosion - units of corrosion rate (mdd and mpy) - direct and indirect damage by corrosion - importance of corrosion prevention in industries - Pilling Bedworth ratio and its significance - passivation - area relationship in both active and passive states of metals - Pourbaix diagrams of Mg, Al and Fe and their advantages and disadvantages

UNIT II 7 Hours

TYPES OF CORROSION

Eight forms of corrosion: uniform, galvanic, crevice corrosion, pitting, intergranular corrosion, selective leaching, erosion corrosion and stress corrosion-Catastrophic oxidation corrosion

UNIT III 9 Hours

MECHANISM OF CORROSION

Hydrogen embrittlement - corrosion fatigue - filiform corrosion - fretting damage and microbes induced corrosion. Corrosion mechanism on steel, iron, zinc and copper metal surfaces

UNIT IV 10 Hours

CORROSION RATE AND ITS ESTIMATION

Rate of corrosion: Factors affecting corrosion. Electrochemical methods of polarization: Tafel extrapolation polarization and linear polarization. Weight loss method - testing for intergranular susceptibility and stress corrosion. Non destructive testing methods: Visual testing - liquid penetrant testing - magnetic particle testing - Ultrasonic monitoring, and eddy current testing

UNIT V 10 Hours

CORROSION CONTROL METHODS

Fundamentals of cathodic protection - types of cathodic protection(sacrificial anodic and impressed current cathodic protection). Stray current corrosion, problems and its prevention. Protective coatings: Metal coatings: Hot dipping (galvanizing, tinning and metal cladding) - natural inhibitors. Selection of suitable design for corrosion control

Total: 45 Hours

POLYMER SCIENCE

3 0 0 3

Course Objectives

- Explain the properties of different polymers with its mechanism
- Select the appropriate polymerization techniques to synthesize the polymers
- Identify suitable polymers for various industrial applications

Course Outcomes (COs)

1. Illustrate the types of mechanism of polymerization reactions and analyze the natural and synthetic polymers
2. Identify the suitable polymerization techniques to synthesize the high quality polymers
3. Identify the structure, thermal, and mechanical properties of polymers for different applications
4. Apply the polymer processing methods to design polymer products
5. Analyze the polymers used in electronic and biomedical applications.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	2	1												
2	1	2												
3	2	2												
4	1	1	2											
5	1	3	2											

UNIT I

10 Hours

POLYMERS AND ELASTOMERS

Classification of polymers - Mechanism: Addition polymerization - free radical, cationic, anionic and co-ordination (Ziegler-Natta) polymerization - copolymerization - condensation polymerization (nylon-6,6) - ring opening polymerization (nylon-6). Elastomers: Natural rubber and synthetic rubber: styrene -butadiene rubber (SBR), butyl, neoprene, thiocol rubbers. High performance polymers: polyethers, polyether ether ketone (PEEK), polysulphones and polyimides

UNIT II **8 Hours**

POLYMERIZATION TECHNIQUES

Homogeneous and heterogeneous polymerization - bulk polymerization (PMMA, PVC) - solution polymerization - polyacrylic acid, suspension polymerization (ion-exchange resins) - emulsion polymerization (SBR) - advantages and disadvantages of bulk and emulsion polymerization. Melt solution and interfacial poly-condensation

UNIT III **8 Hours**

CHARACTERIZATION AND TESTING

Characterization of polymers by Infrared Spectroscopy (IR) and Nuclear Magnetic Spectroscopy (NMR) - Thermal properties: TGA and DSC - Testing tensile strength - Izod impact - Compressive strength - Rockwell hardness - Vicot softening point - water absorption

UNIT IV **9 Hours**

POLYMER PROCESSING

Moulding: Compression - injection - extrusion and blow mouldings. Film casting - calendering. Thermoforming and vacuum formed polystyrene - foamed polyurethanes. Fibre spinning: melt, dry and wet spinning. Fibre reinforced plastics fabrication: hand-layup - filament winding and pultrusion

UNIT V **10 Hours**

SPECIALITY POLYMERS

Preparation and properties of heat resistant and flame retardant polymers. Polymers for electronic applications: liquid crystalline, conducting and photosensitive polymers – E waste management. Polymer for biomedical applications: artificial organs, controlled drug delivery, Scaffolds in tissue Engineering –waste management.

Total: 45 Hours

Course Objectives

- Compare the energy density of commercialized primary and secondary batteries.
- Classify the fuel cells and compare their efficiency in different environmental conditions.
- Demonstrate the various energy storage devices and fuel cells.

Course Outcomes (COs)

1. Find the parameters required for operation of a cell to evaluate the capacity of energy storage devices.
2. Identify the electrodes, electrolyte and cell reactions of different types of primary, secondary batteries and infer the selection criteria for commercial battery systems with respect to commercial applications.
3. Differentiate fuel cells based on its construction, production of current and applications.
4. Compare different methods of storing hydrogen fuel and its environmental applications.
5. Classify the solar cell based on the materials used in it.

Articulation Matrix

2	2	3					1							
3	3	1												
4	2	2					1							
5	3	3					1							

UNIT I**6 Hours****BASICS OF CELLS AND BATTERIES**

Components - classification - operation of a cell - theoretical cell voltage - capacity - specific energy - energy density of lithium and lead acid battery - charge efficiency- charge rate - charge retention - closed circuit voltage - open circuit voltage current density - cycle life - discharge rate-over charge-over discharge

UNIT II**10 Hours****BATTERIES FOR PORTABLE DEVICES AND ELECTRIC VEHICLES**

Primary batteries: zinc-carbon - magnesium, and mercuric oxide - recycling/safe disposal of used cells. Secondary batteries: lead acid - nickel-cadmium - lithium-ion batteries - rechargeable zinc alkaline battery. Reserve batteries: Zinc-silver oxide - lithium anode cell - photo galvanic cells. Battery specifications for cars and automobiles. Extraction of metals from battery materials.

UNIT III**10 Hours****TYPES OF FUEL CELLS**

Importance and classification of fuel cells: Description, working principle, components, applications and environmental aspects of the following types of fuel cells: alkaline fuel cells - phosphoric acid - solid oxide - molten carbonate and direct methanol fuel cells

UNIT IV**10 Hours****HYDROGEN AS A FUEL**

Sources and production of hydrogen: Electrolysis and photocatalytic water splitting. Methods of hydrogen storage: High pressurized gas - liquid hydrogen type - metal hydride. Hydrogen as engine fuel - features, application of hydrogen technologies in the future – limitations.

UNIT V**9 Hours****ENERGY AND ENVIRONMENT**

Future prospects of renewable energy and efficiency of renewable fuels - economy of hydrogen energy. Solar Cells: First, second, third and fourth generation solar cell - photobiochemical conversion cell.

Total: 45 Hours**Reference(s)**

22OMA01**GRAPH THEORY AND COMBINATORICS****3 0 0 3****Course Objectives**

- This course comprehends the graphs as a modeling and analysis tool in computer science & Engineering
- It introduces the structures such as graphs & trees and techniques of counting and combinations, which are needed in number theory based computing and network security studies in Computer Science.

Programme Outcomes (POs)

- a. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b. Problem Analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

1. Recognize the basic ideas of Graph and its characteristics.
2. Assess the characteristics of trees and its properties.
3. Predict the coloring of graphs and its applications in the respective areas of engineering.
4. Compute the permutations and combinations in the engineering field.
5. Demonstrate the types of generating functions and their applications in engineering.

Articulation Matrix

1	1	2													
2	1	3													
3	2	3													
4	2	3													
5	3	3													

UNIT I

9 Hours

INTRODUCTION

Graphs - Introduction - Isomorphism - Sub graphs - Walks, Paths, Circuits - Connectedness - Components - Euler graphs - Hamiltonian paths and circuits - Trees - Properties of trees - Distance and centers in tree - Rooted and binary trees.

UNIT II

9 Hours

TREES, CONNECTIVITY

Spanning trees - Fundamental circuits - Spanning trees in a weighted graph - cut sets - Properties of cut set - All cut sets - Fundamental circuits and cut sets - Connectivity and separability - Network flows - 1- Isomorphism - 2-Isomorphism - Combinational and geometric graphs - Planer graphs - Different representation of a planer graph.

UNIT III

9 Hours

MATRICES, COLOURING AND DIRECTED GRAPH

Chromatic number - Chromatic partitioning - Chromatic polynomial - Matching - Covering - Four color problem - Directed graphs - Types of directed graphs - Digraphs and binary relations - Directed paths and connectedness - Euler graphs.

UNIT IV

9 Hours

PERMUTATIONS

Fundamental principles of counting - Permutations and combinations - Binomial theorem - combinations with repetition - Combinatorial numbers - Principle of inclusion and exclusion - Derangements - Arrangements with forbidden positions.

UNIT V

9 Hours

GENERATING FUNCTIONS

Generating functions - Partitions of integers - Exponential generating function - Summation operator - Recurrence relations - First order and second order - Non-homogeneous recurrence relations - Method of generating functions.

Total: 45 Hours

PRINCIPLES OF MANAGEMENT

3 0 0 3

Course Objectives

- To develop cognizance about importance of management principles.
- Extract the functions and responsibilities of managers.
- To Study and understand the various HR related activities.
- Learn the application of the theories in an organization.
- Analyze the position of self and company goals towards business.

Course Outcomes (COs)

1. Students will be able to understand the basic concepts of Management.
2. Have some basic knowledge on planning process and its Tools & Techniques.
3. Ability to understand management concept of organizing and staffing.
4. Ability to understand management concept of directing.
5. Ability to understand management concept of controlling.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
1									2		3				
2									2		2				
3									2		2				
4									3		2				
5									2		2				

UNIT I

9 Hours

INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS

Definition of Management Science or Art Manager Vs Entrepreneur-types of managers - Managerial roles and skills Evolution of Management Scientific, Human Relations, System and Contingency approaches Types of Business organization - Sole proprietorship, partnership, Company - public and private sector enterprises - Organization culture and Environment Current Trends and issues in Management.

UNIT II **9 Hours**

PLANNING

Nature and purpose of planning - Planning process - Types of planning - Objectives - Setting objectives - Policies - Planning premises - Strategic Management - Planning Tools and Techniques - Decision making steps and process.

UNIT III **9 Hours**

ORGANISING

Nature and purpose – Formal and informal organization - Organization chart - Organization Structure Types - Line and staff authority – Departmentalization - Delegation of authority - Centralization and decentralization - Job Design - Human Resource – Management - HR Planning, Recruitment, Selection, Training and Development, Performance Management, Career planning and management

UNIT IV **9 Hours**

DIRECTING

Foundations of individual and group behaviour – Motivation - Motivation theories - Motivational techniques - Job satisfaction - Job enrichment - Leadership - types and theories of leadership – Communication - Process of communication - Barrier in communication Effective communication - Communication and IT.

UNIT V **9 Hours**

CONTROLLING

System and process of controlling - Budgetary and non - Budgetary control techniques - Use of Computers and IT in Management control - Productivity problems and management - Control and Performance-Direct and preventive control - Reporting.

Total: 45 Hours

ENTREPRENEURSHIP DEVELOPMENT I

3 0 0 3

Course Objectives

- Learn the basics and scope of the Entrepreneurship
- Understand the generation of ideas of the Entrepreneurship
- Evolve the legal aspects of the business
- Learn to analyze the various business finance
- Learn the basics of the Operations Management

Course Outcomes (COs)

1. Analyze the role of entrepreneurship in economic development.
2. Explain the types of ideas that to be used for entrepreneurship development.
3. Examine the legal aspects of business and its association.
4. Examine the sources of business and its analysis.
5. Analyse the different modes of operation management.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
1						1	2		2						
2						1	2		2						
3						1	2		2						
4						1	2		2						
5						1	2		2						

UNIT I

9 Hours

BASICS OF ENTREPRENEURSHIP

Nature, scope and types of Entrepreneurship, Entrepreneur Personality Characteristics, Entrepreneurship process. Role of entrepreneurship in economic development

UNIT II

9 Hours

GENERATION OF IDEAS

Creativity and Innovation, Lateral Thinking, Generation of Alternatives, Fractional, Reversal Method, Brain Storming, Analogies

UNIT III

9 Hours

LEGAL ASPECTS OF BUSINESS

Contract act - Indian contract act, Essential elements of valid contract, classification of contracts, sale of goods act- Formation of contract of sale, negotiable instruments - promissory note, bills and cheques, partnership, limited liability partnership (LLP), companies act-kinds, formation, memorandum of association, articles of association.

UNIT IV

9 Hours

BUSINESS FINANCE

Project evaluation and investment criteria (cases), sources of finance, financial statements, break even analysis, cash flow analysis.

UNIT V

9 Hours

OPERATIONS MANAGEMENT

Importance - functions - deciding on the production system - facility decisions: plant location, plant layout (cases), capacity requirement planning - inventory management (cases) - lean manufacturing, Six sigma.

Total: 45 Hours

21OGE03**ENTREPRENEURSHIP DEVELOPMENT II****3 0 0 3****Course Objectives**

- Evolve the marketing mix for promotion the product / services
- Handle the human resources and taxation
- Learn to analyze the taxation
- Understand the Government industrial policies and supports
- Preparation of a business plan

Course Outcomes (COs)

1. Examine the strategies and plans in marketing management.
2. Analyse the cases involved in human resource management.
3. Classify the direct and indirect taxes in business.
4. Analyze the supports given by government for improving the business.
5. Examine the various steps involved in preparing the business plan.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

2						1	2		2						
3						1	2		2						
4						1	2		2						
5						1	2		2						

UNIT I**9 Hours****MARKETING MANAGEMENT**

Marketing environment, Segmentation, Targeting and positioning, Formulating marketing strategies, Marketing research, marketing plan, marketing mix (cases)

UNIT II**9 Hours****HUMAN RESOURCE MANAGEMENT**

Human Resource Planning (Cases), Recruitment, Selection, Training and Development, HRIS, Factories Act 1948 (an over view)

UNIT III **9 Hours**

BUSINESS TAXATION

Direct taxation, Income tax, Corporate tax, MAT, Tax holidays, Wealth tax, Professional tax (Cases).
Indirect taxation, Excise duty, Customs, Sales and Service tax, VAT, Octroi, GST (Cases).

UNIT IV **9 Hours**

GOVERNMENT SUPPORT

Industrial policy of Central and State Government, National Institute-NIESBUD, IIE, EDI. State Level Institutions - TIIC, CED, MSME, Financial Institutions

UNIT V **9 Hours**

BUSINESS PLAN PREPARATION

Purpose of writing a business plan, Capital outlay, Technical feasibility, Production plan, HR plan, Market survey and Marketing plan, Financial plan and Viability, Government approvals, SWOT analysis.

Total: 45 Hours

22OGE04

**NATION BUILDING, LEADERSHIP AND SOCIAL
RESPONSIBILITY**

3 0 0 3

Course Objectives

- To understand the importance of National Integration, Patriotism and Communal Harmony
- To outline the basic awareness about the significance of soft skills in professional and inter-personal communications and facilitate an all-round development of personality
- To analyze the different types of responsibility role of play for the improvement of society

Course Outcomes (COs)

1. Understand religio-cultural diversity of the country and its impact on the lives of the people and their beliefs
2. Acquire a sense of responsibility, smartness in appearance and improve self confidence
3. Develop the sense of self-less social service for better social & community life
4. Apply the importance of Physical and Mental health and structure of communication organization and various mode of communication
5. Acquire awareness about the various types of weapon systems in the Armed Forces.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

2	2		2				2					2			
3	2		1				1					2			
4	2		3				3					3			
5	2		1				1					2			

UNIT I

9 Hours

NATIONAL INTEGRATION

Importance & Necessity, Factors Affecting National Integration, Unity in Diversity. Threats to National Security. Water Conservation and Rain Harvesting, Waste Management and Energy Conservation. Leadership Capsule-Traits-Indicators-Motivation-Moral Values-Honor Code-Case Studies: Shivaji, Jhansiki Rani, Case Studies-APJ Abdul kalam, Deepa Malik, Maharana Pratap, N Narayan Murthy Ratan Tata Rabindra Nath Tagore, role of NCC cadets in 1965 war.

UNIT II

9 Hours

PERSONALITY DEVELOPMENT AND LEADERSHIP

Intra & Interpersonal skills - Self-Awareness- & Analysis, Empathy, Critical & creative thinking, Decision making and problem solving, Communication skills, Group Discussion – coping with stress and emotions, changing mindset, Public Speaking, Time Management, Social skills, Career counseling, SSB procedure and Interview skills.

UNIT III

9 Hours

SOCIAL SERVICE, COMMUNITY DEVELOPMENT AND ENVIRONMENTAL AWARENESS

Basics of social service and its need, Types of social service activities, Objectives of rural development programs and its importance, NGO's and their contribution in social welfare, contribution of youth and NCC in Social welfare. Protection of children & women safety, Road/ Rail Travel Safety, New initiatives, Cyber and mobile security awareness.

Disaster management Capsule-Organization-Types of Disasters-Essential Services-Assistance-Civil Defence Organization

UNIT IV

9 Hours

HEALTH, HYGIENE AND COMMUNICATION

Sanitation, First Aid in Common Medical Emergencies. Health, Treatment and Care of Wounds. Yoga-Introduction, Definition, Purpose, Benefits. Asanas-Padamsana, Siddhasana, Gyan Mudra, Surya Namaskar, Shavasana, Vajrasana, Dhanurasana, Chakrasana, Sarvaangasana, Halasanaetc.

Obstacle Training Contact: Obstacle training - Intro, Safety measures, Benefits, Straight balance, Clear Jump, Gate Vault, ZigZagBalance, High Wall etc.

COMMUNICATION: Basic Radio Telephony (RT) Procedure-Introduction, Advantages, Disadvantages, Need for standard- Procedures-Types of Radio TelephonyCommunication-Radio telephony procedure, Documentation.

UNIT V**9 Hours****ARMED FORCES AND NCC GENERAL**

Introduction to Digital Signal Processors- Basic Classification-Features TMS320C6713 Architecture-Functional Unit-Pipelining- Addressing Modes -Instruction set Simple Assembly Language Program.

Total: 45 Hours**Reference(s)**

22CB0XA**CRUD Operations in Mobile Technology****1 0 0 1****Course Objective**

- To grasp the fundamental concepts and significance of CRUD (Create, Read, Update, Delete) operations in the context of mobile app development.
- To enhance students' programming skills by enabling them to implement CRUD operations using relevant database APIs and mobile app development platforms.

Course Outcome

1. Understand the CRUD operations and Design user-friendly interfaces for data creation, reading, updating, and deletion.
2. Implement CRUD operations using relevant database technologies (e.g., SQLite, CoreData) and mobile app development platforms.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
1	1	1	1	2						1					
2	2	2	2				1	1	1	2					

UNIT I**15 Hours****CRUD Operations**

Introduction to Mobile applications-Types of applications-Pro's and Con's-Exploring different database models (e.g., relational, NoSQL)-Introduction to SQLite- Core Data-equivalent database technologies-Introduction to React Native-environmental setup-overview of components-Basic UI components (View,Text,Button) -Hello world project-project structure. C- create-Async storage Designing user interfaces for data creation (forms, input validation) -Implementing data insertion logic using database APIs -R-read-Flatlist, Navigation-Update-Vector ICons. Delete.

AI on Edge computing

1 0 0 1

Course Objectives:

- Introduce composite relational model of edge computing along with AI, Machine Learning and Impart the ML frameworks suitable for Edge Computing.
- Elevate the learners with knowledge and practice on tools supporting ML and Edge Computing solutions.

Course Outcomes:

By the end of this course, students will be able to

1. Understand the core principles of edge computing and its applications and Demonstrate proficiency in using the Jetson Nano platform for AI development.
2. Apply parallel programming techniques using CUDA for optimizing AI model performance and deploy various AI models for image processing, classification, object detection, semantic segmentation, and pose estimation.

Articulation Matrix:

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
