B.E. (Mechanical Engineering) 2022 Regulations, Curriculum & Syllabi

BANNARI AMMAN INSTITUTE OF TECHNOLOGY, SATHYAMANGALAM REGULATIONS 2022 (CHOICE BASED CREDIT SYSTEM)

(Common to all B.E./B.Tech. Degree Programmes)

Regulations 2022 have been prepared in accordance with the guidelines given by the University Grants Commission, All India Council for Technical Education and affiliating Universities incorporating the features of the Choice Based Credit System (CBCS). The Regulations 2022 is applicable to the candidates admitted to the Bachelor of Engineering (B.E.) / Bachelor of Technology (B.Tech.) Degree Programmes of the Institution in the Academic Year 2022-2023 for Regular admission (Academic Year 2023-2024 for Lateral Entry) and subsequently.

The regulations hereunder are subjected to amendments as may be decided by the Academic Council of the Institution from time to time. Any or all such amendments will be effective from such date and to such batches of students (including those already in the middle of the programme) as may be decided by the Academic Council.

1. ADMISSION

Candidate, seeking admission to the B.E./B.Tech. Programme, shall satisfy the conditions of admission prescribed by the Directorate of Technical Education (DoTE) and Anna University, Chennai as given below.

1.1 Regular Admission

Candidates, for admission to the first semester of the eight semesters B.E./B.Tech. Degree Programmes, shall be required to have passed:

Higher Secondary Examination (10 +2) of curriculum (Regular Academic Stream) prescribed by the Government of Tamil Nadu with Mathematics, Physics, and Chemistry as three of the four subjects of the study prescribed under Part-III or any other examinations of any Board or University or authority accepted by the Syndicate of the University / DoTE, Chennai as equivalent thereto.

(or)

Should have passed Higher Secondary Examination of Vocational Stream (Engineering/Technology), prescribed by the Government of Tamil Nadu.

1.2 Lateral Entry Admission

1.2.1 The candidates who possess Diploma in Engineering / Technology awarded by the State Board of Technical Education and Training, Tamil Nadu or its equivalent are eligible to apply for lateral Entry admission to the third semester of B.E. / B.Tech. programmes in the branch of study as per the eligibility criteria prescribed by the DoTE from time to time.

(or)

The candidates who possess the Bachelor Degree in Science (B.Sc.) (10+2+3 stream) with Mathematics as a subject in B.Sc. is eligible to apply for lateral entry admission to the third semester of B.E./B.Tech. programmes, as per the eligibility criteria prescribed by the DoTE from time to time. Such candidates shall undergo two additional Engineering subject(s) one each in third and fourth semesters, as bridge courses.

2. PROGRAMMES OFFERED

A candidate may be offered admission to any one of the programmes offered by the Institution for the candidates specified in Clause 1.1 and as per the eligibility criteria of DoTE for the candidates under Clause 1.2 from the list given below:

B. E. Programmes

- 1. Biomedical Engineering
- 2. Civil Engineering
- 3. Computer Science and Design
- 4. Computer Science and Engineering
- 5. Electrical and Electronics Engineering
- 6. Electronics and Communication Engineering
- 7. Electronics and Instrumentation Engineering
- 8. Information Science and Engineering
- 9. Mechanical Engineering
- 10. Mechatronics

B. Tech. Programmes

- 1. Agricultural Engineering
- 2. Artificial Intelligence and Data Science
- 3. Artificial Intelligence and Machine Learning
- 4. Biotechnology

- 5. Computer Science and Business Systems
- 6. Computer Technology
- 7. Fashion Technology
- 8. Food Technology
- 9. Information Technology
- 10. Textile Technology

3. STRUCTURE OF THE PROGRAMME

3.1 Every programme shall have a distinct curriculum with syllabi consisting of theory, laboratory, project, soft-skills and personality development courses, as prescribed by the respective Boards of Studies, broadly categorized under:

Basic Science (BS) courses including Mathematics, Physics, Chemistry and further specialization in these subjects

Engineering Science (ES) courses including Engineering Graphics, Basics of Electrical / Electronics / Civil / Mechanical, Engineering Mechanics and Computer Programming.

Humanities and Social Sciences (HSS) courses including Language Courses, Management Courses, Soft Skills and Professional Ethics.

Professional Courses(PC) include Discipline Core Courses, Professional Electives, and Open Electives.

Employability Enhancement Courses (EEC) includes Project Work, Mini Project and /or Internship, Seminar, Industrial /Practical Training, Startup Management, Value Added, and Certificate Courses.

The medium of instruction is English for all the Courses (except Tamil), examinations, seminar presentation, projects, and any other courses that a student registers for.

3.2 Each course is normally assigned a certain number of credits based on the following.

Contact period per week	Credit(s)
1 Lecture / 1 Tutorial period	1
2 laboratory Periods (Laboratory / Seminar / Project Work / etc.)	1

3.3 All the B.E. / B.Tech. Students will study Communicative English I during the firstsemester. In the second semester, they will be provided an option to enroll and

study Communicative English II / German / Japanese / French / Hindi. while the lower segment will study Communicative English II.

- **3.4** Every student shall be required to opt for 10electives from the list of electives. Students can opt for the electives (Core / Professional) from his / her own discipline courses, during IV to VII Semesters, if he/she satisfies the prerequisite for that particular course.
- **3.5** However, out of ten electives, every student shall be required to opt for, a minimum of one and subject to a maximum of three courses as open electives from the list of electives of the branch / branches other than his / her branch of specialization, if he/she satisfies the prerequisite for that particular course. The course / content should not be covered in their own curriculum and syllabi.
- 3.6 Students can also opt for one-credit courses of 15 to 20 hours duration, which will be offered by the experts from the industry on specialised topics. Students can opt for such one-credit courses during the semesters I to VI as and when these courses are offered. A student will also be permitted to register the one-credit courses offered by other departments, provided the student has fulfilled the necessary prerequisites or the courses that may not require any prerequisites. Under no circumstances, the same one credit course shall be repeated in subsequent semesters in any department / centre for the same batch of the students and a maximum batch size for a given course shall not exceed 40. In case of disciplines with multiple divisions (intake more than 60) multiple batches/ different course(s) shall be offered to other batch(es) of students.

On successful completion of one credit courses, credits will be indicated in the grade sheet, but will not be considered for computing the Cumulative Grade Point Average (CGPA). However, if a student wishes to avail the exemption from any one of the electives (other than open elective) of the semester VII, he / she can do so by exercising his / her option in writing to the respective Head of the Department during the beginning of the VII semester, following the equivalence norm, that one **regular elective** (in the **VII Semester**) is equivalent to **three one-credit courses** completed by the student during the previous semesters, III to VI. Details of the one credit courses offered by the department shall be forwarded to the Office of the Controller of Examinations. However, one credit courses completed during I to II semesters shall be maintained in the Grade sheet as "Additional credits earned" (not considered for the computation of SGPA/CGPA).

- **3.7** A student can register for Self-Study Elective(s) over and above the electives from any branch of Engineering / Technology at the rate of one per semester starting from V semester onwards provided he/she maintains a Cumulative Grade Point Average (CGPA) of 8.50 or above till the previous semesters with no current arrears. Credits will be indicated for such courses in the grade sheets (additional credits) but will not be considered for computing the CGPA.
- **3.8** A Student may be permitted to credit three online courses with the approval of the Departmental Consultative Committee constituted by the Head of the Department, subject to a maximum of 9 credits. The Head of the Institution shall form a 3-member committee with one of the members as HoD and two senior faculty members to ensure that the student has not studied such courses and would not repeat it again as Professional Core/Professional Elective/Open Elective courses. A student can get exemption for a maximum of 9 credits (refer amendments of R2022 approved in 29^a ACM) during the entire programme (in lieu of core elective or open elective). These online courses shall be chosen from the SWAYAM NPTEL platform, provided the offering organisation conducts regular examination and provides marks. The credits earned shall be transferred and the marks earned shall be converted into grades and transferred, provided the student has passed in the examination as per the norms of the offering organisation.

For online courses the following grading pattern is applicable in case of credit transfer and CGPA calculations

Range of percentage of total marks	Letter Grade	Grade Point
91 - 100	0	10
81 - 90	A+	9
71 - 80	А	8
61 - 70	B+	7
51 - 60	В	6
40-50	С	5
< 40	U	0

3.9 Industrial Training / Internship

The students may undergo Industrial training / Internship optionally for a period as specified in the table during summer / winter vacation and the credits earned will be indicated in the grade sheet. If the student earns three credits in Industrial Training / Internship, the student may drop Professional Elective subjected to a maximum of one. In such cases, Industrial Training / Internship need to be undergone continuously from one organization only. However, if the number of credits earned is 1 or 2, these credits shall not be considered for classification of the degree. The students may also undergo Internship at Research organization / University (after due approval from the Department Consultative Committee) during summer / winter vacation.

Duration of Training / Internship	Credit(s)
2 Weeks	1
4 Weeks	2
6 Weeks	3

3.10 Socially Relevant Projects

A student may be permitted to carry out socially relevant projects during semester II to semester VI in consultation with the faculty guide and submit the project report, in the prescribed format, at the end of the Semester for valuation.

On successful completion of socially relevant project work, one credit will be indicated in the grade sheet (Additional credits), but these credits will not be considered for computing the CGPA.

3.11 Mandatory courses

The student shall study the mandatory courses prescribed by the institute which will be mentioned in the Grade Sheet. However, it will not be considered for computation of CGPA.

For the students who complete the Mandatory Course satisfying the attendance requirement, the title of the Mandatory Course will be mentioned in the Grade Sheet.

3.12 Choice of Professional Elective Courses

The professional Elective Courses are listed in the Curriculum in Table format as verticals (Specialisation groups). A student can choose all the Professional Elective

Courses either from one of the verticals or a combination of courses from all verticals in a semester. However, students irrespective of enrolling for additional Insertion of New Clause 6.3 are not permitted to choose more than one course from a row. Students are permitted to enroll in more than one elective course from the same vertical in a semester. In the subsequent semesters students are permitted to enroll one more course in a row, provided if he/she has cleared the earlier course of the same row. For a professional elective course and open elective course, the minimum number of students enrolment permitted shall be 10. However, the minimum number is not applicable for students enrolling B.E. / B. Tech. (Hons) and B.E. / B. Tech. Minor. For the offer of each professional elective at least two choices shall be offered.

4. VALUE ADDED COURSES

A student can opt for the Value Added Courses offered by the various departments from semester II to VII.A separate certificate will be issued on successful completion of the value added course by the competent authority.

5. DURATION OF THE PROGRAMME

- 5.1 A regular student (admitted after 10+2) or equivalent is normally expected to satisfactorily fulfil the requirements for award of the degree B.E. / B.Tech. within four academic years (8 semesters) from the date of admission but in any case not more than 7 years (14 Semesters); lateral entry students shall fulfil such requirements within three academic years (6 semesters) from the date of admission but in any case not more than six years (12 semesters) leading to the award of Degree of Bachelor of Engineering (B.E.) / Bachelor of Technology (B.Tech.) of Anna University, Chennai.
- **5.2** The total period for completion of the programme from the commencement of the semester, to which the student was admitted, shall not exceed the maximum period (Clause 5.1), regardless to the break-of-study (vide Clause 15) or period of prevention in order.
- **5.3** Each semester shall consist of minimum 75 working days. Head of the Department shall ensure that every faculty member teaches the course as prescribed in the approved curriculum and syllabi.
- **5.4** Special Theory / Practical Sessions may be conducted for students who require additional inputs (remedial classes) over and above the number of periods normally

specified, as decided by the Head of the Department, within the specified duration of the semester / programme.

6. COURSE ENROLLMENT AND REGISTRATION

- **6.1** Each student, on admission shall be assigned to a faculty advisor (vide Clause 8) who shall advise / counsel the student about the details of the academic programme and the choice of course(s) considering the student's academic background and career objectives.
- **6.2** Each student shall register for all courses to be undergone in the curriculum of a particular semester (with the facility to drop courses to a maximum of 8 credits (vide clause 6.6)). The courses dropped in earlier semesters can be registered in the subsequent semesters when offered.

Every student shall enrol for the courses of the succeeding semester, in the current semester. However, the student shall confirm the enrolment by registering for the courses within the first five working days after the commencement of the semester concerned.

6.3 The courses that a student registers in a particular semester may include

i. Courses of the current semester.

ii. Courses dropped in the lower semesters

- **6.4** The maximum number of credits that can be registered in a semester is 30. However, this does not include the number of Re-appearance (RA) and Withdrawal (W) courses registered by the student for the appearance of the examination.
- 6.4.1 From the V to VIII semesters, the student has the option of registering for additional courses in a semester. With regard to enrolling for B.E. / B. Tech. (Hons) or B.E. / B. Tech. Minor. Maximum number of credits enrolled in a semester (Honours and Minor) shall not exceed 36. The online courses registered for B.E. / B. Tech. (Hons.) and B.E. / B. Tech. minor shall be over and above this 36 credits.

6.5 Flexibility to Drop Courses

- **6.5.1** A student has to earn the total number of credits specified in the curriculum of the respective programme of study in order to be eligible to obtain the degree. However, if a student wishes, the student is permitted to earn more than the total number of credits prescribed in the curriculum by opting for one credit courses, self-study electives, or additional courses.
- **6.5.2** From the III to VII semesters (from IV to VII semesters in case of lateral entry students), the student has the option for dropping existing courses. The number of

courses a student can drop is limited to 2 in a given semester. The student is permitted to drop the course(s) within 30 days of the commencement of the academic schedule. In such cases, the attendance requirement as stated in Clause 7 is mandatory.

6.5.3 The student shall register Project work I in semester VII and Project work II in semester VIII only.

6.6 Reappearance Registration

- **6.6.1** If a student fails in a theory course, the student shall do reappearance registration (examination) for that course in the subsequent semesters or when it is offered next.
- **6.6.2** On registration, a student may attend the classes for the reappearance registration courses, if the student wishes, and the attendance requirement (vide Clause 7) is not compulsory for such courses.
- **6.6.3** If the theory course, in which the student has failed, is either a professional elective or an open elective, the student may register for Semester End Examinations of the same professional elective or open elective course, respectively in the subsequent semesters.
- **6.6.4** In this case (Clause 6.6.3), the student shall attend the classes, satisfy the attendance requirements (vide Clause 7), earn Continuous Assessment marks and appear for the Semester End Examination.
- 6.6.5 The student who fails in any continuous assessment courses shall register for the same in the subsequent semesters or when offered next, and repeat the course as per Clause 6.6.4.
- **6.6.6** If a student is prevented from writing the Semester End Examination of courses due to lack of attendance, the student has to repeat the semester when it is offered next time.

7. REQUIREMENTS FOR APPEARING FOR THE SEMESTER END EXAMINATIONS OF A COURSE

A student who has fulfilled the following conditions (vide Clause 7.1 and 7.2) shall be deemed to have satisfied the attendance requirements for appearing for Semester End Examination of a particular course.

- **7.1** Every student is expected to attend all the periods and earn 100% attendance. However, a student shall secure not less than 80% overall attendance.
- 7.2 If a student, secures overall attendance between 70% and less than 80%) in the current semester due to medical reasons (prolonged hospitalization / accident / specific illness) or participation in Institution/ University/ State/ National/ International level extra and co-curricular activities, with prior permission from the Head of the Department, shall

be permitted to appear for the current semester examinations subject to the condition that the student shall submit the medical certificate / participation certificate attested by the Head of the Institution (along with condonation form). Such certificates along with the condonation forms shall be forwarded to the Office of the Controller of Examinations for verification and permission to attend the examinations. However, during the entire programme of study, a student can avail such condonation in any two semesters only.

- 7.3 A student shall normally be permitted to appear for Semester End Examination of the course(s) if the student has satisfied the attendance requirements (vide Clause 7.1 7.2) and has registered for examination in those courses of that semester by paying the prescribed fee.
- **7.4** Students who do not satisfy Clause 7.1 and 7.2 and who secure less than 70% overall attendance would not be permitted to move to the higher semester and has to repeat the current semester in the next academic year as per the norms prescribed.
- **7.5** In the case of reappearance (Arrear) registration for a course, the attendance requirement as mentioned in Clauses 7.1 7.3 is not applicable. However, the student has to register for examination in that course by paying the prescribed fee.
- **7.6** A student who has already appeared for a course in a semester and passed the examination is not entitled to reappear in the same course for improvement of grades.

8. FACULTY ADVISOR

To help the students in planning their courses of study and for general advice on the academic programme, the Head of the Department will attach a certain number of students to a faculty member of the department who shall function as faculty advisor for those students. The faculty advisor shall advise and guide the students in registering of courses, reappearance of courses, monitor their attendance and progress and counsel them periodically. The faculty advisor also discusses with or informs the parents about the progress / performance of the students concerned.

The responsibilities of the faculty advisor are:

• To inform the students about the various facilities and activities available to enhance the student's curricular and co-curricular activities.

- To guide student enrolment and registration of the courses.
- To authorize the final registration of the courses at the beginning of each semester.

• To monitor the academic and general performance of the students including attendance and to counsel them accordingly.

9. COMMITTEES

9.1 Common Course Committee

- **9.1.1** A theory course handled by more than one faculty member including the discipline with multiple divisions (greater than or equal to 2) shall have a "Common Course Committee" comprising of all members of faculty teaching that course with one of the members as the Course Coordinator, nominated by the Head of the Institution (Head of the Department in the case of multiple divisions of a discipline) and student representatives (one per specialization or division) registered for that course in the current semester. First meeting of the Common Course Committee shall be held within fifteen days from the date of commencement of the semester. Two subsequent meetings in a semester may be held at suitable intervals. During these meetings, the student members shall meaningfully interact and express their opinions and suggestions of all the students to improve the effectiveness of the teaching learning process. It is the responsibility of the student representatives to convey the proceedings of these meetings to all the students.
- **9.1.2** In addition to this, Common Course Committee (without the student representatives) shall meet to ensure uniform evaluation through the common question papers during continuous assessment and Semester End Examinations.

9.2 Class Committee Meeting

For all the courses taught, prescribed in the curriculum, Class Committee meeting shall be convened thrice in a semester (first meeting within 15 days from the commencement of the semester and other two meetings at equal interval after the first meeting) comprising members of the faculty handling all the courses and two student representatives from the class.

One of the members of the faculty (preferably not handling any courses to that class), nominated by the Head of the Department, shall coordinate the activities of the committee. During these meetings, the student members shall meaningfully interact and express their opinions and suggestions of all the students to improve the effectiveness of the teaching learning process. It is the responsibility of the student representatives to convey the proceedings of these meetings to all other students.

10. SYSTEM OF EXAMINATION

- **10.1** Performance in each course of study shall be evaluated based on (i) Continuous Assessment throughout the semester and (ii) Semester End Examination at the end of the semester for the regular courses or as given in the Clause 17.
- **10.2** Each course, both theory, theory with lab component and laboratory including project work, shall be evaluated as per the scheme of assessment given in Clause 17.
- **10.3** The Semester End Examinations shall normally be conducted after satisfying the Clause 5.2.
- **10.4** For the Semester End Examinations, both theory, theory with lab component the internal and external examiners (from Academia) shall be appointed by the Controller of Examinations as per the guidelines given by the Examination cum Evaluation committee of the Institute.

11. PASSING REQUIREMENTS AND PROVISIONS

- 11.1 The Passing requirement for a student in a course is determined based on the marks obtained both in continuous assessment and Semester End Examinations. A student who secures not less than 50% of total marks prescribed for the course [Continuous Assessment + Semester End Examinations] with a minimum of 45% of the marks prescribed for the Semester End Examinations, shall be declared to have passed the course and acquired the relevant number of credits.
- **11.1.1** If a student fails to secure a pass in a particular course, i.e., failing to obtain minimum marks, as stated above, it is mandatory that he/she shall reappear for the examination in that course in the subsequent semester(s) whenever the examinations are conducted for that course, till he / she secures a 'Pass'.

Continuous Assessment (CA) marks obtained by the student in the first appearance shall be retained and considered valid for one subsequent attempt, except Clause 6.6.4, 6.6.5, 6.6.6 and 6.6.7. However, from the third attempt onwards, the student shall be declared to have passed the course if he/she secures a minimum of 50% in the course prescribed during the Semester End Examinations.

11.2 If a candidate fails in the seventh semester examinations of Project work I, he/she has to resubmit the Project Report within 30 days from the date of declaration of the results. If he / she fails in the Semester End examination of Project work II, he/she shall resubmit the Project Report within 60 days from the date of declaration of the results. The resubmission of the project report and the subsequent viva-voce

examination will be considered as reappearance with payment of exam fee. In case a student fails in the resubmission of a project report and subsequent viva-voce examination, the student shall register for the course again, when offered next.

- **11.3** The passing requirement for the courses which are assessed only through continuous assessment (Laboratory and EEC courses except project work), shall be fixed as minimum 50% and the remaining grades are decided as per clause 12.4. If a candidate fails in EEC courses (Except Project work), he/she has to register and repeat the course within 30 days from the date of declaration of the results. In case a student fails to register within 30 days, he/she shall register for the course again, when offered next.
- **11.4** The minimum number of total credits to be earned by a student to qualify for the award of degree in the various branches of study as prescribed by the respective Boards of Studies is given below:

Branch of Study	Minimum Credits		
Dranch of Study	Regular Admission	Lateral Entry	
B.E. Program	mmes		
Biomedical Engineering	163	121	
Civil Engineering	164	122	
Computer Science and Design	163	119	
Computer Science and Engineering	163	119	
Electrical and Electronics Engineering	163	121	
Electronics and Communication Engineering	163	121	
Electronics and Instrumentation Engineering	163	121	
Information Science and Engineering	162	118	
Mechanical Engineering	164	122	
*Mechatronics / *Mechatronics Engineering	165	123	
B.Tech. Programmes			
Artificial Intelligence and Data Science	165	121	
Artificial Intelligence and Machine Learning	163	119	
Biotechnology	165	123	

Computer Science and Business Systems	163	123
Computer Technology	163	119
Fashion Technology	163	121
Food Technology	163	121
Information Technology	163	119
Textile Technology	163	121

*-applicable to candidates admitted during the AY .: 2022-2023

#-applicable to candidates admitted during the AY.:2023-2024 onwards

- 11.5 Total number of credits to be earned by the student shall be more than or equal to the total number of credits prescribed in the curriculum in force. If the credit assigned for L T P of the courses are not same in two Regulations under consideration, then equivalence shall be arrived as per the credit assignment followed in the Regulations in force.
- **11.6** Student Migration and Credit Transfer: Normalization of the credits will be carried out in consultation with the Board of Studies of the programme concerned and approved by the Head of the Institution, if a student migrates from other affiliated institutions to Bannari Amman Institution of Technology or rejoins from previous regulation to this regulation.
- **11.7** A student shall be declared to have qualified for award of B.E/B.Tech. degree if he/she successfully completes the course requirements (vide Clause 7, 10 and 11) and passed all the prescribed courses of study of the respective programme (listed in Clause 2), within the duration specified in Clause 5.1.

12. ASSESSMENT AND AWARD OF LETTER GRADES

- **12.1** The assessment shall be based on the performance in the Semester End Examinations and/or Continuous Assessments, carrying marks as specified in Clause 17. Letter Grades (based on Credits and Grades) are awarded to the students based on the performance in the evaluation process.
- **12.2** Credit Point is the product of Grade Point and the number of credits for a course and Grade Point is a numerical weight allotted to each letter grade on a 10-point scale (as specified in Clause 12.4), while the Letter Grade is an index of the performance of a student in a said course.

12.3 Condition for Relative Grading

The students' strength is greater than 30, the relative grading method shall be adopted. If the students' strength is less than or equal to 30 then the absolute grading system shall be followed with the grade range as specified below. The relative grading system shall not be applicable for laboratory, project works and continuous assessment courses.

0	A+	Α	B +	В	С	U
91-100	81-90	71-80	61-70	56-60	50–55	<50

12.4 The performance of a student will be reported using Letter Grades, each carrying certain points as detailed below: A student who earns a minimum of 5 grade points in a course is declared to have successfully passed the course.

Description	Letter Grade	Grade Points
Outstanding	0	10
Excellent	A +	9
Very Good	А	8
Good	B +	7
Average	В	6
Satisfactory	С	5
Reappearance	U	0
Withdrawal	W	0
Absent	AB	0
Shortage of Attendance	SA	0

- 'U' ---Reappearance is required for that particular course
- 'SA' --- shortage of attendance (Clause 7) and hence prevented from writing end semester examination.
- **12.5** After completion of the evaluation process, Semester Grade Point Average (SGPA), and the Cumulative Grade Point Average (CGPA) are calculated using the formula:

$$SGPA/CGPA = \sum$$

Where

 C_i : Credit allotted to the course.

 g_i : Grade Point secured corresponding to the course.

n : number of courses successfully cleared during the particular semester in the case of SGPA and all the semesters, under consideration, in the case CGPA.

RA grades will be excluded for calculating SGPA and CGPA.

- **12.6** A student who does not appear for the Semester End Examinations in a course, after registering for the same, shall be deemed to have appeared for that examination for the purpose of classification (Subject to Clause 14 and 15).
- 12.7 For the non-credit courses grades shall be indicated as given in Clause 17 and shall not be counted for the computation of SGPA/CGPA.
 For the co-curricular activities such as NCC / NSS / NSO / YRC etc.., a completed status will appear in the grade sheet. Every student shall put in a minimum of 75% attendance in the training and attend the camp compulsorily. The training and camp

shall be completed before registering for the fifth semester courses. A completed status in the co-curricular activities is compulsory for the award of a degree.

12.8 Revaluation: A student, who seeks the revaluation of the answer script, is directed to apply through proper application to the Office of the Controller of Examinations in the prescribed format through the Head of the Department. The Office of the Controller of Examinations shall arrange for the revaluation and declare the results. Revaluation is not permitted for the courses other than theory courses. In the case of theory courses with laboratory component, a student can seek revaluation for the theory component only, following the procedure stated above.

12.9 Eligibility for the Award of Degree

A student shall be declared to be eligible for the award of the B.E. / B.Tech. degree provided the student has

i.Successfully gained the required number of total credits as specified in the curriculum corresponding to the student's programme within the stipulated time.

- ii.Successfully completed the course requirements, appeared for the Semester End Examinations and passed all the courses prescribed in all the 8 semesters within a maximum period of 7 years for regular / 6 years for lateral reckoned from the commencement of the first semester to which the candidate was admitted.
- iii.Successfully completed the NCC / NSS / NSO / YRC / Extra-curricular/ Cocurricular requirements.

iv.No disciplinary action is pending against the student.

v.The award of degree must have been approved by the Syndicate of the University.

12.10 Conduct of Academic Audit

The purpose of the academic audit is to encourage departments to evaluate the quality of their education processes, thereby assure and regularly improve the quality of teaching learning process and the outputs. A regular academic audit is conducted in the Institute to evaluate the performance of various departments so that the issues that need attention can be identified to improve the overall quality of curriculum design, teaching learning process, and evaluation. The academic audits are conducted by internal and external academic experts.

12.11 Conduct of Special Examination

The special or makeup exams may be conducted for the students who missed the regular examination due to participation / representing the institute in various activities and the schedule may be included in the academic calendar. The special or makeup exams may be conducted after the completion of Semester End Examinations and prior to publishing the results of semester end examinations.

12.12 In the consolidated grade sheet the CGPA earned shall be converted into Percentage of marks as follows: Percentage of Marks = CGPA \times 10

13. CLASSIFICATION OF THE DEGREE AWARDED

For the purpose of the 'Award of Degree', the duration of completion of the programme shall be the total duration taken by a student for completing first time registration of all the required courses and satisfying Clause 11, regardless of the period of Break of study as per Clause 15 and satisfy any one of the conditions required as given below.

- **13.1 First Class with Distinction:** A student who satisfies the following conditions shall be declared to have passed the examination in **First class with Distinction**:
 - Should have passed the examination in all the courses of all the eight semesters (six semesters for lateral entry students) in the student's First Appearance within five

years / four years for lateral, which includes authorised break of study of one year. Withdrawal from examination (vide Clause 15) will not be considered as an appearance.

- Should have secured a CGPA of not less than 8.50
- Should **NOT** have been prevented from writing Semester End Examination due to lack of attendance.
- **13.2** First Class: A student who satisfies the following conditions shall be declared to have passed the examination in First class:
 - Should have passed the examination in all the courses of all eight semesters (six semesters for lateral entry students) within five years / four years for lateral, which includes one year of authorized break of study (if availed) or prevention from writing the Semester End Examination due to lack of attendance (if applicable).
 - Should have secured a CGPA of not less than 6.50
- 13.3 Second Class: All other students (not covered in clauses 13.1 and 13.2) who qualify for the award of the degree shall be declared to have passed the examination in Second class.

14. WITHDRAWAL FROM THE EXAMINATION

- **14.1** A student may, for valid reasons, be granted permission by the Head of the Department to withdraw from appearing in the examination in any course(s) only once during the entire duration of the degree programme. The application shall be sent to the office of the Controller of Examinations through the Head of the Institution with required documents.
- **14.2** Withdrawal application shall be valid only, if the student is eligible to write the examination as per Clause 7 and, if it is made within 10 working days before the commencement of the Semester End Examination in that course or courses and also recommended by the Head of the Department.
- 14.3 Notwithstanding the requirement of mandatory 10 working days notice, applications for withdrawal for special cases under extraordinary conditions will be considered on the merit of the case.
- 14.4 If a student withdraws a course or courses from writing Semester End Examinations, he/she shall register the same in the subsequent semester and write the Semester End Examination(s).

- **14.5** Withdrawal shall not be considered as an appearance in the examination for the eligibility of a student for First Class with Distinction or First Class.
- **14.6** Withdrawal is permitted for the Semester End Examinations in the final semester, only if the period of study of the student concerned does not exceed 5 years (for regular) / 4 years (for lateral) as per clause 13.1 & 13.2.

15. AUTHORIZED BREAK OF STUDY FROM A PROGRAMME

- **15.1** A student is permitted to go on break of study for a fixed period of one year as a single break in the entire course of study.
- **15.2** A student is normally not permitted to break the period of study temporarily. However, if a student happens to discontinue the programme temporarily during the middle of programme of study, for reasons such as personal accident or hospitalization due to ill health or in need of health care, he/she shall apply to the Head of the Institution in advance, in any case, not later than the last date for registering for the semester examination, through the Head of the Department stating the reasons for the break of study. However, a student detained for want of minimum attendance requirement as per Clause 7 shall not be considered as permitted 'Break of Study' and Clause 15.3 is not applicable for such case.
- **15.3** The student is permitted to re-join the programme after the break / prevention due to lack of attendance, shall be governed by the curriculum and regulations in force at the time of rejoining. The students re-joining in new regulations shall apply to the Academic In charge in the prescribed format through the Head of the Department at the beginning of the readmitted semester itself for prescribing additional/equivalent courses, if any, from any semester of the regulations in force, so as to bridge the curriculum in force and the old curriculum.
- **15.4** Authorized break of study will be counted towards the duration specified for passing all the courses (vide Clause 5.1 and 5.2) and for the purpose of classification of degree (vide Clause 13).
- **15.5** The total period for completion of the programme reckoned from the commencement of the first semester to which the student is admitted shall not exceed the maximum period specified in Clause 5.1, irrespective of the period of break of study in order that he / she may be eligible, for the award of the degree (vide Clause 13).

- **15.6** In case of valid reasons (as stated in Clause 15.2) extended break of study may be granted by the Head of the Institution for a period not more than one year in addition to the earlier authorized break of study.
- **15.7** If a student does not report back to the Institute, even after the extended break of study, the student's name shall be permanently deleted from the college enrollment. Such students are not entitled to seek readmission under any circumstances.

16. IMPLEMENTATION OF HONOURS / MINOR DEGREE

16.1 B.E. / B.Tech. (Hons.)

- The students should have earned additionally a minimum of 18 credits from more than one vertical of the same programme.
- Should have passed all the courses in the first attempt.
- Should have earned a minimum CGPA of 7.50.

16.2 B.E. / B.Tech. Minor in another discipline

The student should have earned additionally a minimum of 18 credits in any one of the verticals of other B.E/B.Tech. programmes.

- B.E / B.Tech. (Hons.) and B.E./B.Tech. Minor in another discipline will be optional for students and the students shall be permitted to select any of them only.
- B.E/B.Tech. (Hons.) or B.E./ B.Tech. Minor shall be offered by the Department irrespective of the number of students enrolled.

If the student has failed in the additional courses or faced a shortage of attendance, they will not be printed in the grade sheet and will not be considered for CGPA calculation and classification of degree.

- **16.3** Students can earn a maximum of 6 credits in online mode (SWAYAM NPTEL platform), out of these 18 credits with the approval of the Departmental Consultative Committee constituted by the Head of the Department.
- 16.4 B.E./ B. Tech. (Honours) in the same discipline, B.E. / B.Tech. Honours and B.E. / B.Tech. Minor in another discipline degrees will be optional for students.
- 16.5 For category 16.1, the students will be permitted to register for the courses from V Semester onwards provided the CGPA earned by the students until semester III should be of 7.50 and above and cleared all the courses in the first attempt.

- 16.6 For category 16.2, the students will be permitted to register the courses from semester V onwards provided the CGPA earned by the students until semester III is 7.50 and above.
- 16.7 If a student decides not to opt for Honours, after completing a certain number of additional courses, the additional courses studied shall be considered instead of the professional elective courses which are part of the curriculum. If the student has studied more number of such courses than the number of Professional Elective courses required as per the curriculum, the courses with higher grades shall be considered for the calculation of CGPA. Remaining courses shall be printed in the grade sheet, however, they will not be considered for the calculation of CGPA.
- **16.8** If a student decides not to opt for Minor degree, after completing a certain number of courses, the additional courses studied shall be considered instead of open elective courses which are part of the curriculum. If the student has studied more of such courses than the number of open electives required as per the curriculum, the courses with higher grades shall be considered for calculation of CGPA. Remaining courses shall be printed in the grade sheet, however, they will not be considered for the calculation of CGPA.
- **16.9.** If a student successfully completes all the requirements of the programme and also meets the requirements of B.E. / B. Tech. (Hons) or B.E. / B. Tech. Minor but desires not to opt for the additional qualification, then he/she has to submit a declaration with regard to the same 30 days before the completion of VIII semester.

16.10 Classification of the Degree Awarded

The conditions for First Class with Distinction, First Class, and Second Class are the same as Clause 13.1, 13.2 and 13.3 except the following classification.

First Class: A student who satisfies the following conditions shall be declared to have passed the examination in First class for the purpose of the 'Award of Degree', of **B.E.** / **B.Tech.** Honors should have secured a CGPA of not less than 7.50.

17. SCHEME OF ASSESSMENT

Courses offered under B.E. / B.Tech. Programmes are assessed as given below:

I CO- CURRICULAR /EXTRACURRICULAR ACTIVITY

a. CO-CURRICULAR ACTIVITY

Component	Applicable from academic year 2024-2025 onwards Marks 100	
L		
Continuous Internal Assessment (CIA)		
Distribution of marks for CIA		
Programme Organization / Participation	20	
Member of Technical society (International / National repute like IEEE, IET etc.)	20	
Brief Report of event	20	
Sharing of Views / Presentation / Seminar	20	
Attendance	10	
Coordinator Assessment	10	
Total Marks	100	

b. EXTRACURRICULAR ACTIVITY (NCC/NSS/ NON-TECHNICAL CLUBS)

Component	Applicable from academic year 2024-2025 onwards	
	Marks	
Continuous Internal Assessment (CIA)	100	
Distribution of marks for CIA		
Activity plan and Programme Organization	20	
Participation (National / State / Regional /Institute)	20	
Activity Report	20	
Achievements	20	
Attendance	10	
Coordinator Assessment	10	
Total Marks	100	

Component	Applicable from academic year 2024-2025 onwards Marks	
-		
Continuous Internal Assessment (CIA)	100	
Distribution of marks for CIA		
Participation (National / State / Regional /Institute)	20	
Regular practice	20	
Skill Development	20	
Sportsmanship (sports ethics) and Teamwork	20	
Achievements	10	
Coordinator Assessment	10	
Total Marks	100	

c. EXTRA CURRICULAR ACTIVITY (SPORTS AND GAMES)

II COMPREHENSIVE WORK

Component	Applicable till academic year 2022- 2023 Marks	
Concept Application	50	
Comprehensive Interview	50	
Total Marks	100	

III ENGINEERING DRAWING

Component	Applicable till academic year 2023-2024	Applicable from academic year 2024- 2025 onwards
	Marks	Marks
Continuous Internal Assessment (CIA)	100	50

Distribution of marks for CIA		
Exercise (Minimum 10 Exercises /Modelling)	60	-
Model Examinations	40	25
Class work	-	05
Assignments (Minimum 8)	-	20
Semester End Examinations (SEE)	-	50
Total Marks	100	100

IV ENVIRONMENTAL SCIENCE

Component	Applicable till academic year 2023-2024	Applicable from academic year 2024-2025 onwards
	Marks	Marks

Optional Test: A student becomes eligible to appear for an optional test conducted after the Periodical Test II, only under the following circumstances: (i) absent for Test I or Test II or both on account of medical reasons (hospitalization / accident / specific illness), or (ii) participation in the College / University / State / National / International level Sports events with prior permission from the Head of the Institution and (iii) on satisfying the conditions (i) or (ii), the student should have registered for the Optional Test, through the concerned member of faculty who handles the course or through the respective Head of the Department, submitted to the Controller of Examinations. Such Optional Tests are conducted for the courses under the categories I and II courses listed above.

18. FIELD / INDUSTRIAL VISIT / INTERNSHIP

In order to provide the experiential learning to the students, Head of the Department shall take efforts to arrange at least two industrial visits / field visits. The students may also undergo in-plant training / internship during summer / winter vacation between III and VII semesters.

19. PERSONALITY AND CHARACTER DEVELOPMENT

Every student shall be required to undergo a minimum of 40 hours of Personality Development Programmes viz, NSS / NCC / YRC / YOGA / Sports and Games / Technical and Non-technical Club activities. The attendance of the personality and character development courses / events shall be maintained on the regular basis by the club coordinator and made available in the Office of the Controller of Examinations before the commencement of Semester examinations of Semester I to Semester IV.

20. DISCIPLINE

A student is expected to follow the rules and regulations laid down by the Institute and the affiliating University, as published from time to time. Any violations, if any, shall be treated as per the procedures stated thereof. If a student indulges in malpractice in any of the Semester End Examination / Continuous Assessments, he / she shall be liable for punitive action as prescribed by the Institution / University from time to time.

21. REVISION OF REGULATIONS, CURRICULUM AND SYLLABI

The Institution reserves the right to revise/amend/change the Regulations, Curriculum, Syllabi, Scheme of Examinations through the Academic Council.

VISION OF THE DEPARTMENT

Seek excellence in the field of Mechanical Engineering education through knowledge and skills to cater to the requirements of the society.

MISSION OF THE DEPARTMENT

- To continuously improving the teaching and learning process to enable students to meet global needs.
- To upgrade the knowledge and skills of students, members of faculty and supporting staff through regular training.
- To produce the best minds of engineers capable of meeting expectations of Industry, Society and Entrepreneurship development.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- I. Design and develop the products/process using core knowledge to provide innovative solutions for industrial and social needs.
- II. Build the skills and recent technologies on software -based tools to execute design and manufacturing.
- III. Effective performance in research, higher education and entrepreneurial ventures, with an attitude of lifelong learning and self-discipline.

PROGRAMME OUTCOMES (POs)

- 1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- 6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

- 10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

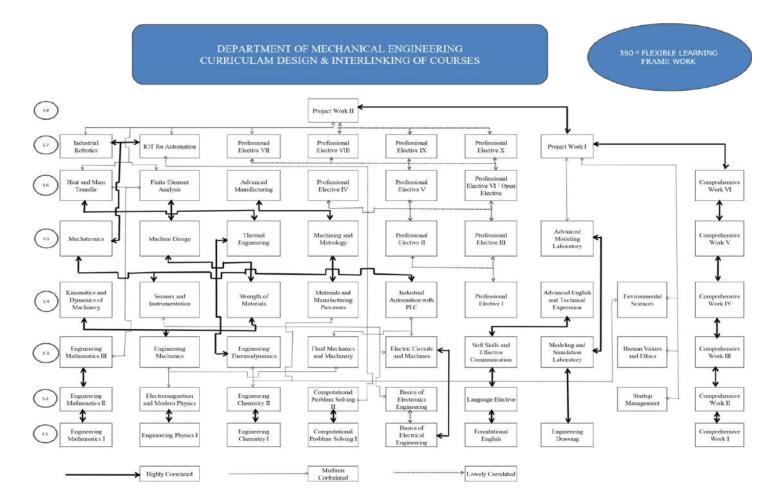

- 1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.
- 2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.
- 3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

SUMMARY OF CREDIT DISTRIBUTION

- BS Basic Sciences
- ES Engineering Sciences
- HSS Humanities and Social Sciences
- PC Professional Core
- PE Professional Elective
- EEC Employability Enhancement Course
- CA Continuous Assessment
- ES End Semester Examinatio

22MA101 ENGINEERING MATHEMATICS I

Course Objectives

- To impart mathematical modelling to describe and explore real-world phenomena and data.
- To provide basic understanding on Linear, quadratic, power and polynomial, exponential, and multi variable models
- Summarize and apply the methodologies involved in framing the real world problems related to fundamental principles of polynomial equations

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Implement the concepts of mathematical modelling based on linear functions in Engineering.
- 2. Formulate the real-world problems as a quadratic function model
- 3. Demonstrate the real-world phenomena and data into Power and Polynomial functions
- 4. Apply the concept of mathematical modelling of exponential functions in Engineering
- 5. Develop the identification of multivariable functions in the physical dynamical problems

Articulation Matrix

UNIT I

MATHEMATICS MODELING OF LINEAR FUNCTIONS

The geometry of linear equations - Formation of linear equations: Method of least squares and method of regression - Vector spaces: Basic concepts with examples - Linear combination - Eigen values and vectors

UNIT II

MATHEMATICAL MODELING OF QUADRATIC FUNCTIONS

General form of a quadratic function - Basic relationships between the equation and graph of a quadratic function - Sum of squares error and the quadratic function of best fit - Quadratic forms: Matrix form - Orthogonality - Canonical form and its nature

9 Hours

3104

UNIT III

MATHEMATICAL MODELING OF POWER AND POLYNOMIAL FUNCTIONS

Characteristics of the graphs of power and polynomial functions - Fitting of power and polynomial functions using the method of least squares - Local maxima and local minima of power and polynomial functions - Power series of functions with real variables, Taylors series, radius and interval of convergence - Tests of convergence for series of positive terms - comparison test, ratio test

UNIT IV

MATHEMATICAL MODELING OF EXPONENTIAL FUNCTIONS

Concept of exponential growth - Graphs of exponential functions - Relationship between the growth factor and exponential growth or decline - Exponential equations have a variable as an exponent and take the form y= abx through least square approximation - Calculus of exponential functions - Exponential series - Characteristics

UNIT V

Reference(s)

MATHEMATICAL MODELING OF MULTIVARIABLE FUNCTIONS

Graphing of functions of two variables -Partial derivatives - Total derivatives - Jacobians - Optimization of multivariable functions with constraints - Optimization of multivariable functions without constraints

Tutorial: 15 Hours

Total: 60 Hours

- 1. Erwin Kreyszig , Advanced Engineering Mathematics, Tenth Edition, Wiley India Private Limited, New Delhi 2016
- 2. B. S. Grewal, Numerical Methods in Engineering & Science: With Programs in C, C++ & MATLAB, Khanna, 2014

- 4. Thomas and Finney, Calculus and analytic Geometry, Fourteenth Edition, By Pearson Paperback, 2018

9 Hours

9 Hours

22PH102 ENGINEERING PHYSICS

2023

Course Objectives

- Understand the concept and principle of energy possessed by mechanical system
- Exemplify the propagation and exchange of energy
- Identify the properties of materials based on the energy possession

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply the concept and principles of energy to understand mechanical systems
- 2. Analyze the types of mechanical oscillations based on vibrational energy
- 3. Analyze the concept of propagation of energy as transverse and longitudinal waves
- 4. Analyze the exchange of energy and work between the systems using thermodynamic principles
- 5. Apply the concept of energy and entropy to understand the mechanical properties of materials

Articulation Matrix

UNIT I

CONSERVATION OF ENERGY

Concept of energy - types of energy - conservation of energy Mechanical energy: - translation - rotation - vibration - Kinetic and potential energies - conservation - work and energy - laws of motion - minimization of potential energy - equilibrium - dissipative systems – friction.

UNIT II VIBRATIONAL ENERGY

Periodic Motion - Simple Harmonic Motion - Energy of the SHM - Pendulum types - Damped oscillations - forced oscillations - natural frequency - resonance

UNIT III

PROPAGATION OF ENERGY

Transfer of energy - material medium - Transverse wave - Longitudinal wave - standing wave interference - Doppler effect. Sound waves and its types - characteristics - human voicere - reflection refraction - beats

UNIT IV

EXCHANGE OF ENERGY

Energy in transit - heat - Temperature - measurement - specific heat capacity and water - thermal expansion - Heat transfer processes. Thermodynamics: Thermodynamic systems and processes - Laws of thermodynamics - Entropy - entropy on a microscopic scale - maximization of entropy

UNIT V

ENERGY IN MATERIALS

Elastic energy - Structure and bonding - Stress - strain - Tension and compression - elastic limit - Elastic Modulus - Stress - strain diagram - ductility - brittleness - rubber elasticity and entropy

EXPERIMENT 1

Assess the physical parameters of different materials for engineering applications like radius, thickness and diameter to design the electrical wires, bridges and clothes

EXPERIMENT 2

Evaluate the elastic nature of different solid materials for modern industrial applications like shock absorbers of vehicles

EXPERIMENT 3

Analyze the photonic behavior of thin materials for advanced optoelectronic applications like adjusting a patient's head, chest and neck positions as a medical tool

EXPERIMENT 4

Investigate the phonon behavior of poor conductors for thermionic applications like polymer materials and textile materials

EXPERIMENT 5

Assess the elongation of different solid materials for industrial applications like buildings, bridges and vehicles

EXPERIMENT 6

Measure the compressibility of different liquids for modern industrial applications like navigation, medicine and imaging

22CH103 ENGINEERING CHEMISTRY I 2023

Course Objectives

- Understand the origin of elements from the universe •
- Outline the properties of elements in the periodic table •
- Analyse the different types of bond formed during chemical reactions and its reaction • thermodynamics
- Summarize different states of matter based on atomic arrangement •

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply nuclear transmutation reactions that lead to the formation of elements in the universe
- 2. Apply atomic structure of elements in the periodic table and interpret the periodic trends in properties of elements with its anomaly
- 3. Apply conditions for the formation of different chemical bonds and predict the minimum energy required for a reaction to occur
- 4. Analyse endothermic and exothermic processes and exchange of energy during chemical reactions
- 5. Analyze whether the given matter is a solid, liquid, gas, or plasma and interpret the arrangement of atoms

Articulation Matrix С PSO PSO **PSO** PO PO PO PO PO PO PO PO PO **PO1 PO1 PO1** 0 5 8 9 0 2 3 4 6 7 1 2 1 2 1 No 1 2 1 _ _ 1 1 _ _ _ _ _ _ _ _ 2 2 1 1 1 _ _ _ _ _ _ _ _ _ 3 2 1 1 1 _ _ _ _ _ _ _ _ _ 2 4 1 1 1 -_ _ _ _ _ _ _ _ 2 1 5 1 1 _ _ _ _ _ _ _ _ _ _

UNIT I

ORIGIN OF ELEMENTS

Hydrogen - Elements and Sun - fusion - hypernova - supernova - dying stars - man-made elements

UNIT II

ATOMIC STRUCTURE AND PERIODICITY

Atomic Structure - Electronic configuration - Periodic Table - Periodic trends in properties of elements - Anomalous behaviour in periodicity

6 Hours

2

_

_

_

_

_

CHEMICAL BONDING

Octet rule & its limitations - types of chemical bonds - bond energy - bond cleavage - activation energy of reactions

UNIT IV

UNIT III

REACTION THERMODYNAMICS

Conservation of energy - Endothermic reactions & exothermic reactions - Exchange of energy involved in chemical reactions

UNIT V

STATES OF MATTER Solid - liquid - gas - plasma - quantum dots - arrangement of atoms/ions/molecules in different phases

EXPERIMENT 1

Evaluate the dissolved oxygen (DO) levels in effluent samples collected from sewage treatment plants in BIT. Ensure the suitability of outlet water for the growth of aquatic animals (fishes).

EXPERIMENT 2 Investigate the amount of Iron (Fe2) in a mild steel alloy sample using a spectrophotometer.

EXPERIMENT 3

Estimate the amount of chromium present in industry effluent samples and bottled beverages.

EXPERIMENT 4

Ensure the suitability of drinking water in the RO water supply in BIT based on the presence of chloride ions.

EXPERIMENT 5

Assess the acidic nature of effluent water from industries using the conductometric titration method.

EXPERIMENT 6

Measure the stain removal efficiency of the prepared soaps from stained clothes.

EXPERIMENT 7

Assess the purity of commercially available active pharmaceutical ingredients (aspirin) as per the government-prescribed standards.

22GE001 FUNDAMENTALS OF COMPUTING

Course Objectives

- Understand the fundamental digital logics behind computations of computer systems.
- Develop simple assembly language programs with respect to arithmetic operations.
- Understand the program execution process and basics of software development methodologies.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Infer the hidden languages and inner structures of computer hardware and software through codes and combinations.
- 2. Interpret the organizational and architectural issues of a digital computer with concepts of various data transfer techniques in digital computers and the I/O interfaces.
- 3. Analyze programming problems and apply assembly instructions to solve simple problems.
- 4. Infer the fundamentals of operating system and System programs basics.
- 5. Apply the software development methodologies to various real life scenarios.

Articulation Matrix

UNIT I

CODES AND COMBINATIONS

Communication using Mores and Braille binary codes - Digitizing letters, numbers and objects using binary codes - Performing simple operations: addition through binary codes.

UNIT II

COMPUTATION USING COMPUTER

Communication to computing devices through various input sources - Computational operation - its flow, functions and control - communication to output devices - Basic communication protocol.

UNIT III

ASSEMBLY LANGUAGE PROGRAMMING

Little Man Computing (LMC) Model - Instruction Set - Labels - Calculation -Branching - Input- Output - Loops - Simple programs.

UNIT IV

OPERATING SYSTEM AND APPLICATION GENERATION

BIOS - Device Drivers - Resources - Scheduler - Applications Generation and Creation - Stages of Compilation - Linkers, Loaders and Libraries.

UNIT V

SOFTWARE DEVELOPMENT

Phases of application life cycle management - Software Development Methodologies - Web Page development.

22HS001 FOUNDATIONAL ENGLISH 1022

Course Objectives

- Heighten awareness of grammar in oral and written expression
- Improve speaking potential in formal and informal contexts
- Improve reading fluency and increased vocabulary
- Prowess in interpreting complex texts
- Fluency and comprehensibility in self-expression
- Develop abilities as critical readers and writers
- Improve ability to summarize information from longer text, and distinguish between primary and supporting ideas.

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

Course Outcomes (COs)

- 1. Express themselves in a professional manner using error-free language
- 2. Express in both descriptive and narrative formats
- 3. Interpret and make effective use of the English Language in Business contexts
- 4. Actively read and comprehend authentic text
- 5. Express opinions and communicate experiences.

Articulation Matrix

C O No	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3

5	-	-	-	-	-	-	-	-	2	3	-	2	-	-	-

UNIT I

SELF-EXPRESSION

Self-Introduction-Recreating Interview Scenarios (with a focus on verbal communication)-Subject Verb Concord - Tenses - Common Errors in verbal communication Be-verbs Self-Introduction-Recreating interview scenarios-Haptics-Gestures-Proxemics-Facial expressions- Paralinguistic / Vocalic- Body Language- Appearance-Eye Contact-Artefacts Self-Introduction-Powerful openings and closings at the interview-Effective stock phrases - Modified for spontaneity and individuality-Question tags, framing questions including WH- questions- Prepositions-Listening to Ted talks-Listening for specific information

UNIT II

CREATIVE EXPRESSION

Descriptive Expression-Picture Description and Blog Writing -Vocabulary-One-word substitution-Adjectives-Similes, Metaphors, Imagery & Idioms -Link words - Inclusive language Narrative Expression- Travelogue and Minutes of Meeting -Verbal Analogy-Sequence & Time order words -Jumbled paragraph, sentences, Sequencing-Text & Paragraph Completion-Past tense -Using quotation marks

UNIT III

FORMAL EXPRESSION

Formal Letters and Emails-Writing: E-mails and Letters of apology, Requisition and Explanation, and Letters to newspapers-Speaking: Tendering verbal apologies, and explanations, persuading a listener/ audience-Hierarchy in Business correspondence- Subject of a mail, Header, Body (Salutation) and Footer of a mail- Conjunctional clause Punctuation-Formal Idioms-Phrases-Articles - Definite & Indefinite-Types of sentences-Modal verbs Precision in comprehension, Summary writing, Selective summary-Reading: Active reading- short paragraphs, excerpts, articles and editorials-Skimming and Scanning Reading comprehension & analysis-Tenses, QP/PQ approach. Identifying the central themes/ crux-Interpreting tone - formal/informal/semi-formal-Note-taking-Listening: Listening for data, for specific information, for opinion-Active and passive Listening-Transcription-Paraphrasing and summarizing information-Agreeing & disagreeing-Note-taking-Writing: Summary writing, selective summary, paraphrasing, note-making, opinion pieces-Finding synonyms in the context Paraphrasing-Sentence Transformation - simple, compound, complex. Sentence Substitution-Sentence completion-Interpreting paragraphs

22GE003 BASICS OF ELECTRICAL ENGINEERING 2023

Course Objectives

- To understand the basic concepts of electrical charge and its properties
- To interpret the formation of electric field due to electric charges
- To illustrate the concept of magnetic fields due to revolving electron
- To illustrate the force on moving charges in electric and magnetic field
- To understand the energy transfer in electro mechanical conversion

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Interpret the behavior of electric charges in different medium using coulombs law.
- 2. Analyse the electric field due to different charge distributions.
- 3. Analyse the magnetic field intensity due to long conductor, solenoid, toroid and magnetic dipoles.
- 4. Analyze the force on conductors due to the moving charges.
- 5. Interpret the energy conversion concepts in electromagnetic fields.

5	2	2	-	-	-	-	-	-	-	-	2	2	1	-	-

Articulation Matrix

UNIT I

ELECTRIC CHARGE

Properties of charge, additivity of charges, quantization of charge, conservation of charge, Forces between multiple charges, Electric charge in conductors, Drift of Electrons, Charges in Clouds.

UNIT II

ELECTRIC FIELD

Electric field due to system of charges, Significance of Electric field line. Electric Dipole and its significance, Continuous charge distribution, Field in infinite long uniform straight conductors, field in uniform charged uniform infinite plane sheet, field due to uniform thin spherical sheet.

UNIT III

MAGNETIC FIELDS

Concept of magnetic field, magnetic fields in infinitely long straight wire, straight and toroidal solenoids, Magnetic dipole moment of a revolving electron, Magnetic field intensity due to a magnetic dipole (bar magnet) along its axis and perpendicular to axis, Induced Electric field due to changing Magnetic Field.

UNIT IV

FORCE ON CHARGES

Force on a moving charge in uniform magnetic and electric fields, Force on a current carrying conductor in a uniform magnetic field, Force between two parallel current carrying conductors.

UNIT V

ELECTRO MECHANICAL ENERGY CONVERSION

Energy transfer in electromagnetic fields, Energy storage in magnetic field, Electromagnetic induction, induced emf, Eddy currents. Self and mutual inductance Linear Momentum and Angular Momentum carried by Electromagnetic Fields.

EXPERIMENT 1 Analysis The Behavior of A Fixed Resistor in An Electric Heater.	6 Hours
EXPERIMENT 2 Construct an Electrical Wiring Layout For A Basic Household Applications.	9 Hours
EXPERIMENT 3 Analysis The Self and Mutual Induction In A Domestic Fan.	6 Hours

EXPERIMENT 4

Design A Transistor-Based Electronic Switch.

22GE005 ENGINEERING DRAWING

1022

Course Objectives

- To provide knowledge on fundamentals of engineering drawings and conic sections.
- To impart skill on orthographic projections of points and lines.
- To familiarize on projection of planes and simple solids.
- To provide knowledge on section of solids and development of surfaces of simple solids.
- To impart skill on conversion of isometric view to orthographic projection and vice versa.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO5: Modern tool usage Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: Individual and team work Function effectively as an individual, and as a member or leader in teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Apply the engineering drawing concepts as per industrial standards.
- 2. Illustrate the projection of points and lines.
- 3. Apply principles of projection drawings to project planes and simple solids
- 4. Create the sectional drawing of solids and develop the surfaces.
- 5. Construct the orthographic projection from isometric view and vice versa.

UNIT I

7 Hours

FUNDAMENTALS OF ENGINEERING DRAWING

Definition, standards, drawing tools, drawing sheets, scales, line and its types. Practices on lettering, numbering, dimension of drawings. Construction of conic sections - ellipse, parabola and hyperbola using eccentricity method.

UNIT II

PROJECTION OF POINTS AND LINES

Principles of projection, projection of points in four quadrants, first angle projection of straight lines - perpendicular to one plane, parallel and inclined to both planes.

UNIT III

PROJECTION OF PLANES AND SOLIDS

Projection of simple planes and projection of simple solids - parallel, perpendicular and inclined to one plane using change of position method, inclined to both the planes

UNIT IV

SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES

Section of Solids - simple position with cutting plane parallel, perpendicular and inclined to one plane with true shape of section. Development of surfaces - simple and truncated solids.

UNIT V

ORTHOGRAPHIC PROJECTIONS AND ISOMETRIC VIEW

Orthographic projections and isometric view of components used in engineering applications.

22HS003 HERITAGE OF TAMILS

Course Objectives

- 1. Describe the linguistic diversity in India, highlighting Dravidian languages and their features.
- 2. Summarize the evolution of art, highlighting key transitions from rock art to modern sculptures.
- 3. Examine the role of sports and games in promoting cultural values and community bonding.
- 4. Discuss the education and literacy systems during the Sangam Age and their impact.
- 5. Outline the importance of inscriptions, manuscripts, and the print history of Tamil books in preserving knowledge and culture.

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Understand the concept of language families in India, with a focus on Dravidian languages.
- 2. Trace the evolution of art from ancient rock art to modern sculptures in Tamil heritage.
- 3. Identify and differentiate various forms of folk and martial arts in Tamil heritage.
- 4. Understand the concepts of Flora and Fauna in Tamil culture and literature.
- 5. Evaluate the contributions of Tamils to the Indian Freedom Struggle.

Articulation Matrix

UNIT I

LANGUAGE AND LITERATURE

Language Families in India - Dravidian Languages – Tamil as a Classical Language – Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature - Management Principles in Thirukural - Tamil Epics and Impact of Buddhism & Jainism in Tamil Land - Bakthi Literature Azhwars and Nayanmars - Forms of minor Poetry - Development of Modern literature in Tamil - Contribution of Bharathiyar and Bharathidhasan.

UNIT II

HERITAGE - ROCK ART PAINTINGS TO MODERN ART – SCULPTURE

Hero stone to modern sculpture - Bronze icons - Tribes and their handicrafts - Art of temple car making - Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments - Mridhangam, Parai, Veenai, Yazh and Nadhaswaram - Role of Temples in Social and Economic Life of Tamils.

3 Hours

3 Hours

1001

UNIT III EOLKAND MADTIAL

FOLK AND MARTIAL ARTS

Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leather puppetry, Silambattam, Valari, Tiger dance - Sports and Games of Tamils.

UNIT IV

UNIT V

THINAI CONCEPT OF TAMILS

Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature - Aram Concept of Tamils - Education and Literacy during Sangam Age - Ancient Cities and Ports of Sangam Age - Export and Import during Sangam Age - Overseas Conquest of Cholas.

CONTRIBUTION OF TAMILS TO INDIAN NATIONAL MOVEMENT AND INDIAN CULTURE

Contribution of Tamils to Indian Freedom Struggle - The Cultural Influence of Tamils over the other parts of India – Self-Respect Movement - Role of Siddha Medicine in Indigenous Systems of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.

22HS003 தமிழர் மரபு

பாடத்திட்டத்தின் நோக்கம்

- இந்திய மொழிக்குடும்பத்துள் திராவிட மொழிகள் தனித்து இயங்கும் தன்மையை அதன் சிறப்புகள் வழி அறிதல்.
- 2. தொன்றுதொட்டு தமிழர், கலையில் அடைந்த வளர்ச்சியை இயம்புதல்.
- 3. சங்ககால தமிழரின் கற்றல் திறத்தை இலக்கியங்கள் வழி ஆராய்தல்.

கற்றலின் விளைவு

- இந்திய மொழிக்குடும்பத்துள் திராவிட மொழிகள் தனித்து இயங்கும் தன்மையை அதன் சிறப்புகள் வழி அறிதல்.
- 2. தொன்றுதொட்டு தமிழர், கலையில் அடைந்த வளர்ச்சியை இயம்புதல்.
- 3. சங்ககால தமிழரின் கற்றல் திறத்தை இலக்கியங்கள் வழி ஆராய்தல்.
- தமிழ் மொழியின் சிறப்புகளை அதன் படைப்பிலக்கியங்கள் மூலம் அறிந்து கொள்ளுதல்.
- கற்காலம் தொடங்கி, இக்காலம் வரை சிற்பக்கலை அடைந்த வளர்ச்சியை கண்டுகொள்ளல்.
- தமிழர் தம் வாழ்வில் எங்கனம் இயற்கையை வணங்கி போற்றினர் என்பதை திணை கோட்பாட்டின் வழி தெளிதல்.
- இந்திய விடுதலை போரில் தமிழர் ஆற்றிய பங்கினை தெரிந்து கொள்ளுதல்.

அலகு ၊ மொழி மற்றும் இலக்கியம்:

இந்திய மொழிக் குடும்பங்கள் – திராவிட மொழிகள் – தமிழ் ஒரு செம்மொழி – தமிழ் செவ்விலக்கியங்கள் - சங்க இலக்கியத்தின் சமயச் சார்பற்ற தன்மை – சங்க இலக்கியத்தில் பகிர்தல் அறம் – திருக்குறளில் மேலாண்மைக் கருத்தக்கள் – தமிழ்க் காப்பியங்கள், தமிழகத்தில் சமண பௌத்த சமயங்களின் தாக்கம் - பக்தி இலக்கியம், ஆழ்வார்கள் மற்றும் நாயன்மார்கள் – சிற்றிலக்கியங்கள் – தமிழில் நவீன இலக்கியத்தின் வளர்ச்சி – தமிழ் இலக்கிய வளர்ச்சியில் பாரதியார் மற்றும் பாரதிதாசன் ஆகியோரின் பங்களிப்பு.

அலகு II மரபு – பாறை ஓவியங்கள் முதல் நவீன ஓவியங்கள் வரை – சிற்பக் கலை:

நடுகல் முதல் நவீன சிற்பங்கள் வரை – ஐம்பொன் சிலைகள்– பழங்குடியினர் மற்றும் அவர்கள் தயாரிக்கும் கைவினைப் பொருட்கள், பொம்மைகள் – தேர் செய்யும் கலை – சுடுமண் சிற்பங்கள் – நாட்டுப்புறத் தெய்வங்கள் – குமரிமுனையில் திருவள்ளுவர் சிலை – இசைக் கருவிகள் – மிருதங்கம், பறை, வீணை, யாழ், நாதஸ்வரம் – தமிழர்களின் சமூக பொருளாதார வாழ்வில் கோவில்களின் பங்கு. அலகு III நாட்டுப்புறக் கலைகள் மற்றும் வீர விளையாட்டுகள்: 3 தெருக்கூத்து, கரகாட்டம், வில்லுப்பாட்டு, கணியான் கூத்து, ஒயிலாட்டம், தோல்பாவைக் கூத்து, சிலம்பாட்டம், வளரி, புலியாட்டம், தமிழர்களின் விளையாட்டுகள்.

அலகு IV தமிழர்களின் திணைக் கோட்பாடுகள்:

தமிழகத்தின் தாவரங்களும், விலங்குகளும் – தொல்காப்பியம் மற்றும் சங்க இலக்கியத்தில் அகம் மற்றும் புறக் கோட்பாடுகள் – தமிழர்கள் போற்றிய அறக்கோட்பாடு – சங்ககாலத்தில் தமிழகத்தில் எழுத்தறிவும், கல்வியும் – சங்ககால நகரங்களும் துறை முகங்களும் – சங்ககாலத்தில் ஏற்றுமதி மற்றும் இறக்குமதி – கடல்கடந்த நாடுகளில் சோழர்களின் வெற்றி.

அலகு V இந்திய தேசிய இயக்கம் மற்றும் இந்திய பண்பாட்டிற்குத் தமிழர்களின் பங்களிப்பு:

இந்திய விடுதலைப்போரில் தமிழர்களின் பங்கு – இந்தியாவின் பிறப்பகுதிகளில் தமிழ்ப் பண்பாட்டின் தாக்கம் – சுயமரியாதை இயக்கம் – இந்திய மருத்துவத்தில், சித்த மருத்துவத்தின் பங்கு – கல்வெட்டுகள், கையெழுத்துப்படிகள் - தமிழ்ப் புத்தகங்களின் அச்சு வரலாறு.

TOTAL : 15 PERIODS

TEXT-CUM-REFERENCE BOOKS

22MA201 ENGINEERING MATHEMATICS II

3104

Course Objectives

- To impart and analyze the concepts of differential equations to describe in real-world phenomena
- To provide basic understanding on differential equation models and vector field models
- Summarize and apply the methodologies involved in framing the real world problems related to fundamental principles of complex functions

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Interpret the concept of differential equations through mathematical modeling and analyze its applications in engineering
- 2. Formulate the real world problems as second order linear differential equations and give solutions for the same
- 3. Demonstrate the real-world phenomena with magnitude and direction in the form of vector functions
- 4. Apply the concept of vector fields and line integrals through mathematical modeling in engineering
- 5. Determine complex functions and apply them to formulate problems arising in engineering

Articulation Matrix

UNIT I

9 Hours

FIRST ORDER LINEAR DIFFERENTIAL EQUATIONS

Formation of differential equations- Solutions of first order linear ODE: Leibnitzs and method of separation of variables- Cooling/Heating of an object - A falling object- Modeling of electric circuits: RL and RC circuits - Modeling of population dynamics: Exponential growth and decay - Logistic growth model.

UNIT II

SECOND ORDER LINEAR DIFFERENTIAL EQUATIONS

Methods of solving second order linear ordinary differential equations -Models for linear oscillators: Simple harmonic motion - Mechanical vibrations with and without damping - Electric circuit system: **RLC** circuits

UNIT III

VECTOR DIFFERENTIAL CALCULUS

Vector and scalar functions - Fields - Derivative of vector function and geometrical interpretation-Velocity and acceleration - Gradient and its properties- Tangent and normal vectors - Directional derivative- Divergence of a vector field - Curl of a vector field - Projectile motion

UNIT IV

VECTOR INTEGRAL CALCULUS

Line integrals of vector point functions - Surface integral of vector point functions - Applications of line and surface integrals - Greens theorem in a plane - Stokes theorem - Gauss divergence theorem

UNIT V

COMPLEX FUNCTIONS

Basic concepts of Complex numbers Geometrical representation of complex number - Analytic functions and its properties - Construction of Analytic functions: Fluid flow Electric flow - Mapping of complex functions

Tutorial: 15 Hours

Total: 60 Hours

22PH202 ELECTROMAGNETISM AND MODERN PHYSICS

2023

Course Objectives

- Understand the principles and mechanisms of electricity and magnetism
- Infer the classification of electromagnetic waves
- Analyze the theory of relativity and energy bands

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Analyze the mechanisms of Coulomb's law and electric potential in various charge system
- 2. Analyze the magnetic properties of materials and their effects on external magnetic fields
- 3. Analyze the classification of electromagnetic waves based on frequency and wavelength
- 4. Outline the importance of theory of relativity and analyze the wave nature of particles
- 5. Apply the principles of electron and hole transport to study p-type and n-type semiconductors.

Articulation Matrix

UNIT I

ELECTRICITY

Electric monopoles - Electric field - Electric flux - Electric potential - Electrical energy- Capacitor-Conductors and Insulators - Electric dipole and polarization - Electric current - Voltage sources - Resistance

UNIT II

MAGNETISM

Sources of magnetism - Monopoles - Magnetic field and force - magnetic field and current distribution - Magnetic dipole - Magnetic potential energy - Inductor - Electric and magnetic field comparison

UNIT III

ELECTROMAGNETIC WAVES AND LIGHT

Electromagnetism: Basic laws - Electromagnetic energy - radiation. Electromagnetic waves: Origin, nature and spectrum - Visible light. Principle of least time - Geometrical optics-Human eye - Diffraction - Interference - Polarization - LASER

UNIT IV

MODERN PHYSICS

Special theory of relativity - Simultaneity and time dilation - Length contraction - Relativistic mass variation. Matter waves - De-Broglie hypothesis - Wave nature of particles

UNIT V

ENERGY BANDS IN SOLIDS

Band theory of solids - Classification of materials - Semiconductors - Direct and indirect semiconductor - Fermi energy - Intrinsic and extrinsic semiconductor - Carrier concentration - Electrical conductivity

EXPERIMENT 1

Analysis a I-V characteristics of a solar cell for domestic applications

EXPERIMENT 2

Determine the carrier concentration of charge carriers in semiconductors for automotive applications

EXPERIMENT 3

Investigate the photonic behavior of laser source for photo copier device

EXPERIMENT 4

Implement the principle of stimulated emission of laser for grain size distribution in sediment samples

EXPERIMENT 5

Assess the variation of refractive index of glass and water for optical communication

EXPERIMENT 6

Evaluate the band gap energy of semiconducting materials for display device applications Total: 60 Hours

22CH203 ENGINEERING CHEMISTRY II

Course Objectives

- Understand the concept of electrochemistry for determination of electrode potential, pH and applications as energy storage devices
- Outline the chemistry of metal corrosion and analyze the methods of corrosion control
- Understand the role of catalyst in the rate of reaction
- Summarize the variation in properties and reactivity of isotopes.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Apply the electrochemical concepts to calculate the electrode potential of a metal.
- 2. Analyze the working of batteries for the energy storage devices.
- 3. Analyze the specific operating conditions under which corrosion occurs and suggest a method to control corrosion
- 4. Analyze the role of catalyst in a chemical reaction and illustrate reaction mechanisms.
- 5. Analyze various types of nuclear transmutation, including decay reactions.

22GE002 COMPUTATIONAL PROBLEM SOLVING

3003

Course Objectives

- Analyze the algorithm design techniques and development principles in solving the real life problems.
- Illustrate the different ways of organizing and storing the data in computing systems.
- Understand the basic network configuration and setup connections among different device systems.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO12: Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Analyze a problem and formulate algorithms, pseudocodes and flowcharts.
- 2. Develop algorithmic solutions to simple computational problems and explore algorithmic approaches to problem solving.
- 3. Design and apply appropriate data structures for solving computing problems.
- 4. Analyze and compare the various storage devices used in a computer system.
- 5. Analyze the requirements for a given organizational structure and establish the connection between two or more computers to form a network.

22GE004 BASICS OF ELECTRONICS ENGINEERING

2023

Course Objectives

- To Understand the concept of energy transmission through mechanical, electrical and electromagnetic form.
- To Analyze the use of PN Junction Diode and BJT for signal conditioning.
- To apply the working principle of PN Junction Diode and BJT for the design of basic Digital Logic.
- To analyze the working and characteristics of Special Purpose Semiconductor Electronic Devices.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Understand the need for electrical and electromagnetic signal transmission.
- 2. Analyze the working principle and characteristics of PN junction diode.
- 3. Analyze the working principle and characteristics of Bipolar Junction Transistor.
- 4. Apply the working principle of PN Junction diode and BJT for designing basic Digital Logic functions.
- 5. Analyze the energy conversion needs and working principle of Special purpose electronic devices.

22HS002 STARTUP MANAGEMENT

Course Objectives

- Promote entrepreneurial spirit and motivate to build startups
- Provide insights on markets and the dynamics of buyer behaviour
- Train to develop prototypes and refine them to a viable market offering
- Support in developing marketing strategies and financial outlay
- Enable to scale up the porotypes to commercial market offering

Programme Outcomes (POs)

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Course Outcomes (COs)

- 1. Generate valid and feasible business ideas
- 2. Create Business Model Canvas and formulate positioning statement
- 3. Invent prototypes that fulfills an unmet market need
- 4. Formulate business strategies and create pitch decks
- 5. Choose appropriate strategies for commercialization

UNIT IV

BUSINESS STRATEGIES AND PITCHING

Design of Marketing Strategies and Campaigns, Go-To-Market Strategy, Financial KPIs Financial Planning and Budgeting, Assessing Funding Alternatives, Pitching, Preparing Pitch Decks

UNIT V

COMMERCIALIZATION

Implementation: Prototype to Commercialization, Test Markets, Institutional Support, Registration Process, IP Laws and Protection, Legal Requirements, Type of Ownership, Building and Managing Teams, Defining role of investors

EXPERIMENT 1 Analysis of various business sectors	1 Hours
EXPERIMENT 2 Developing a Design Thinking Output Chart	2 Hours
EXPERIMENT 3 Creating Buyer Personas	1 Hours
EXPERIMENT 4 Undertake Market Study to understand market needs and assess market potential	3 Hours
EXPERIMENT 5 Preparation of Business Model Canvas	2 Hours
EXPERIMENT 6 Developing Prototypes	15 Hours
EXPERIMENT 7 Organizing Product Design Sprints	2 Hours
EXPERIMENT 8 Preparation of Business Plans	2 Hours
EXPERIMENT 9 Preparation of Pitch Decks	2 Hours Total: 45 Hours

3 Hours

22HS006 TAMILS AND TECHNOLOGY

1001

Course Objectives

- Analyse graffiti on potteries as a form of historical and cultural documentation during the Sangam Age.
- Investigate the building materials and the historical context of Hero stones during the Sangam Age by Analysing the details of stage constructions in Silappathikaram and their cultural significance.
- Examine ancient knowledge of oceans and its impact on Tamil society.

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Understand the significance of the weaving industry during the Sangam Age and its cultural importance.
- 2. Understand the significance of dams, tanks, ponds, and sluices in the agricultural and irrigation practices of the Chola Period.
- 3. Explore the architectural designs and structural construction methods used in household materials during the Sangam Age.
- 4. Explore the art of shipbuilding in ancient Tamil culture and its role in maritime trade and transportation.
- 5. Trace the development of scientific terminology and vocabulary in Tamil language.

Articulation Matrix

UNIT I

3 Hours

WEAVING AND CERAMIC TECHNOLOGY

Weaving Industry during Sangam Age – Ceramic technology – Black and Red Ware Potteries (BRW) – Graffiti on Potteries.

UNIT II

DESIGN AND CONSTRUCTION TECHNOLOGY

Designing and Structural construction House & Designs in household materials during Sangam Age -Building materials and Hero stones of Sangam age - Details of Stage Constructions in Silappathikaram - Sculptures and Temples of Mamallapuram - Great Temples of Cholas and other worship places - Temples of Nayaka Period - Type study (Madurai Meenakshi Temple)- Thirumalai Nayakar Mahal - Chetti Nadu Houses, Indo - Saracenic architecture at Madras during British Period.

UNIT III

MANUFACTURING TECHNOLOGY

Art of Ship Building - Metallurgical studies - Iron industry - Iron smelting, steel - Copper and gold -Coins as source of history - Minting of Coins - Beads making-industries Stone beads -Glass beads -Terracotta beads -Shell beads/ bone beats - Archeological evidences - Gem stone types described in Silappathikaram.

UNIT IV

AGRICULTURE AND IRRIGATION TECHNOLOGY

Dam, Tank, ponds, Sluice, Significance of Kumizhi Thoompu of Chola Period, Animal Husbandry -Wells designed for cattle use - Agriculture and Agro Processing - Knowledge of Sea - Fisheries -Pearl - Conche diving - Ancient Knowledge of Ocean - Knowledge Specific Society.

UNIT V

SCIENTIFIC TAMIL & TAMIL COMPUTING

Development of Scientific Tamil - Tamil computing - Digitalization of Tamil Books - Development of Tamil Software - Tamil Virtual Academy - Tamil Digital Library - Online Tamil Dictionaries -Sorkuvai Project.

22HS006 - தமிழரும் தொழில்நுட்பமும் 1 0 0 1

பாடத்திட்டத்தின் நோக்கம்

- சங்க காலத்தில் வரலாறு மற்றும் கலாச்சார ஆவணங்களின் ஒரு வடிவமாக, மட்பாண்டங்கள் மீதான கிராஃபிட்டியை பகுப்பாய்வு செய்தல்.
- சிலப்பதிகாரத்தில் கட்டப்பட்ட மேடை கட்டுமானங்களின் விவரங்களையும் அவற்றின் கலாச்சார முக்கியத்துவத்தையும் பகுப்பாய்வு செய்வதன் மூலம், சங்க காலத்தில் மாவீரர் கற்களின் கட்டுமானப் பொருட்கள் மற்றும் வரலாற்று சூழலை ஆராய்தல்.
- சமுத்திரங்கள் பற்றிய பண்டைய அறிவையும், தமிழ் சமூகத்தில் அதன் தாக்கத்தையும் ஆராய்வது ஆகியவை இப்பாடத்திட்டத்தின் நோக்கம் ஆகும்.

கற்றலின் விளைவு

- சங்க காலத்தில் நெசவுத் தொழிலின் முக்கியத்துவத்தையும் அதன் கலாச்சார முக்கியத்துவத்தையும் புரிந்து கொள்ளல்.
- சோழர் கால விவசாய மற்றும் நீர்ப்பாசன நடைமுறைகளில் அணைகள், குளங்கள் மற்றும் மதகுகளின் முக்கியத்துவத்தைப் புரிந்து கொள்ளல்.
- சங்க காலத்தில் வீட்டுப் பொருட்களில் பயன்படுத்தப்பட்ட கட்டடக்கலை வடிவமைப்புகள் மற்றும் கட்டமைப்பு கட்டுமான முறைகளை ஆராய்தல்.
- பண்டைய தமிழ் கலாச்சாரத்தில், கப்பல் கட்டும் கலை, கடல் வர்த்தகம் மற்றும் போக்குவரத்தில் அதன் பங்கை ஆராய்தல்.
- தமிழ் மொழியில் அறிவியல் சொற்களஞ்சியம் மற்றும் சொல்லகராதியின் வளர்ச்சியைக் கண்டறிதல்.

அலகு I நெசவு மற்றும் பானைத் தொழில்நுட்பம்: 3

சங்க காலத்தில் நெசவுத் தொழில் – பானைத் தொழில்நுட்பம் - கருப்பு சிவப்பு பாண்டங்கள் – பாண்டங்களில் கீறல் குறியீடுகள்.

3

அலகு II வடிவமைப்பு மற்றும் கட்டிடத் தொழில்நுட்பம்:

சங்க காலத்தில் வடிவமைப்பு மற்றும் கட்டுமானங்கள் & சங்க காலத்தில் வீட்டுப் பொருட்களில் வடிவமைப்பு- சங்க காலத்தில் கட்டுமான பொருட்களும் நடுகல்லும் – சிலப்பதிகாரத்தில் மேடை அமைப்பு பற்றிய விவரங்கள் - மாமல்லபுரச் சிற்பங்களும், கோவில்களும் – சோழர் காலத்துப் பெருங்கோயில்கள் மற்றும் பிற வழிபாட்டுத் தலங்கள் – நாயக்கர் காலக் கோயில்கள் - மாதிரி கட்டமைப்புகள் பற்றி அறிதல், மதுரை மீனாட்சி அம்மன் ஆலயம் மற்றும் திருமலை நாயக்கர் மஹால் – செட்டிநாட்டு வீடுகள் – பிரிட்டிஷ் காலத்தில் சென்னையில் இந்தோ-சாரோசெனிக் கட்டிடக் கலை.

3

3

அலகு III உற்பத்தித் தொழில் நட்பம்:

கப்பல் கட்டும் கலை – உலோகவியல் – இரும்புத் தொழிற்சாலை – இரும்பை உருக்குதல், எஃகு – வரலாற்றுச் சான்றுகளாக செம்பு மற்றும் தங்க நாணயங்கள் – நாணயங்கள் அச்சடித்தல் – மணி உருவாக்கும் தொழிற்சாலைகள் – கல்மணிகள், கண்ணாடி மணிகள் – சுடுமண் மணிகள் – சங்கு மணிகள் – எலும்புத்துண்டுகள் – தொல்லியல் சான்றுகள் – சிலப்பதிகாரத்தில் மணிகளின் வகைகள்.

அலகு IV வேளாண்மை மற்றும் நீர்ப்பாசனத் தொழில் நுட்பம்: 3

அணை, ஏரி, குளங்கள், மதகு – சோழர்காலக் குமுழித் தாம்பின் முக்கியத்துவம் – கால்நடை பராமரிப்பு – கால்நடைகளுக்காக வடிவமைக்கப்பட்ட கிணறுகள் – வேளாண்மை மற்றும் வேளாண்மைச் சார்ந்த செயல்பாடுகள் – கடல்சார் அறிவு – மீன்வளம் – முத்து மற்றும் முத்துக்குளித்தல் – பெருங்கடல் குறித்த பண்டைய அறிவு – அறிவுசார் சமூகம்.

அலகு V அறிவியல் தமிழ் மற்றும் கணித்தமிழ்:

அறிவியல் தமிழின் வளர்ச்சி –கணித்தமிழ் வளர்ச்சி - தமிழ் நூல்களை மின்பதிப்பு செய்தல் – தமிழ் மென்பொருட்கள் உருவாக்கம் – தமிழ் இணையக் கல்விக்கழகம் – தமிழ் மின் நூலகம் – இணையத்தில் தமிழ் அகராதிகள் – சொற்குவைத் திட்டம். TOTAL : 15 PERIODS

- தமிழக வரலாறு மக்களும் பண்பாடும் கே.கே. பிள்ளை (வெளியீடு: தமிழ்நாடு பாடநால் மற்றும் கல்வியியல் பணிகள் கழகம்).
- 2. கணினித் தமிழ் முனைவர் இல. சுந்தரம். (விகடன் பிரசுரம்).
- கீழடி வைகை நதிக்கரையில் சங்ககால நகர நாகரிகம் (தொல்லியல் துறை வெளியீடு)
- பொருநை ஆற்றங்கரை நாகரிகம். (தொல்லியல் துறை வெளியீடு)
- 5. Social Life of Tamils (Dr.K.K.Pillay) A joint publication of TNTB & ESC and RMRL (in print)
- Social Life of the Tamils The Classical Period (Dr.S.Singaravelu) (Published by: International Institute of Tamil Studies.

- The Contributions of the Tamils to Indian Culture (Dr.M.Valarmathi) (Published by: International Institute of Tamil Studies.)
- Keeladi 'Sangam City C ivilization on the banks of river Vaigai' (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu)
- Studies in the History of India with Special Reference to Tamil Nadu (Dr.K.K.Pillay) (Published by: The Author)
- 11. Porunai Civilization (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu)
- 12. Journey of Civilization Indus to Vaigai (R.Balakrishnan) (Published by: RMRL) Reference Book.

22HS009 COCURRICULAR OR EXTRACURRICULAR ACTIVITIES

	Pre-	requisite	Assessment Patt	tern
•	NIL		Mode of Assessment	Weightage(%)
			Continuous Internal Assessment	100
			Semester End Examinations	NA
~	01.1			

Course Objectives

- To develop Interpersonal and Leadership Skills
- To Foster Personal Growth and Time Management
- To enhance Community Engagement and Social Responsibility

Programme Outcomes (POs)

- PO8 Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice
- PO9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
- PO10 Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO12 Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

Course Outcomes (COs)

The students will be able to

- CO1 Build leadership skills and teamwork capabilities by engaging in group activities through organization and participation of events
- CO2 Demonstrate the technical, creative, and interpersonal skills through active participation in technical events.
- CO3 Exhibit balanced academics with diverse cultural, sports, and literary activities, showcasing improved time management and organizational skills.
- CO4 Enhance the social responsibility and community engagement by participating in outreach and extension activities.
- CO5 Gain practical experience and industry insights through field visits, industrial training, and internships.

Articulation Matrix

Every student shall be required to undergo a minimum of 40 hours of Co-curricular / Extracurricular activities organized through society chapters, technical and non-technical Club activities during the II semester, failing which he/she shall not be permitted to appear for the VIII Semester examination. Such students are permitted to appear for the Semester End examinations only after completing the requirements. The attendance of the courses / events shall be maintained on the regular basis by the concerned Co-coordinators and made available in the Office of the Controller of Examinations before the commencement of Semester end examinations of Semester II.

The following co-curricular and extra-curricular activities are conducted on a regular basis and is compulsory for all students. The students' performances are assessed on the basis of their participation and organization of events in voluntary services, performance in technical and nontechnical events, games and sports, performance in literary activities, performance in cultural activities and their participation in District/Regional/State/National and International level events.

Co-Curricular activity

Technical events organized through departments, Special labs, Clubs, Society and Chapters etc. includes but not limited to Workshop, Seminar, Conference, Symposium Technical Contest Competition, Field visit, Industrial Training, and Internships.

Extracurricular activity

Non-Technical Events Organized through departments, Special labs, Clubs, Society and Chapters etc. includes but not limited to NSS Camp, NCC Camp, YRC activity, Yoga, Sports and games, Cultural events, Outreach activity and Extension activity.

Total 40 Hours

22ME301 ENGINEERING MATHEMATICS III

Course Objectives

- Introduce the basic concepts of partial differential equations
- Introduce the numerical techniques of interpolation in various intervals in real life situations

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply the concepts of partial differential equations and the methods of solving the equations
- 2. Apply numerical techniques to solve the algebraic, transcendental equations
- 3. Perform differentiation through numerical interpolation
- 4. Solve the ordinary differential equations through numerical techniques
- 5. Compute the solutions of partial differential equations through numerical techniques

C O No	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3

5	1	2	-	-	-	-	-	-	-	-	-	-	2	2	-

Articulation Matrix

UNIT I

PARTIAL DIFFERENTIAL EQUATIONS

Formation - Solutions of standard types of first order equations - Lagranges equation - Linear partial differential equations of second and higher order with constant coefficients.

UNIT II

SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS

Solution of algebraic and transcendental equations - Fixed point iteration method - Newton Raphson method - Solution of linear system of equations - Gauss elimination method - Pivoting - Gauss Jordan method - Iterative methods of Gauss Jacobi and Gauss Seidel - Eigen values of a matrix by Power method and Jacobis method for symmetric matrices.

9 Hours

9 Hours

3104

59

UNIT III

INTERPOLATION AND NUMERICAL DIFFERENTIATION

Interpolation with equidistant point - Lagrange Interpolation Polynomial - Newton Interpolating Polynomial using divided Difference Table - Numerical differentiation using interpolation.

UNIT IV

INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS

Single step methods - Taylors series method - Eulers method - Modified Eulers method - Fourth order Runge - Kuta method for solving first order equations - Multi step methods - Milnes and Adams - Bash forth predictor corrector methods for solving first order equations.

UNIT V

NUMERICAL SOLUTIONS OF PARTIAL DIFFERENTIAL EQUATIONS

Finite difference techniques for the solution of two dimensional Laplaces and Poisons equations on rectangular domain - One dimensional heat flow equation by explicit and implicit (Crank Nicholson) methods - One dimensional wave equation by explicit method.

Tutorial: 15 Hours

Total: 60 Hours

9 Hours

22ME302 ELECTRIC MACHINES AND DRIVES 2023

Course Objectives

- To understand the construction, operation and characteristics of various types of DC machines.
- To understand the operation and performance of special machines.
- To understand the construction working and performance characteristics of single phase and three phase induction motor.
- To understand the construction working and performance characteristics of single phase and three phase induction motor.
- To understand the characteristics and modes of excitation of stepper motor.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Analyse the electro-mechanical energy conversion process in rotating electrical machines.
- 2. Examine the performance of special electrical machines.
- 3. Apply suitable starting and speed control methods for three phase induction motors.
- 4. Apply the various converter topologies to design and analyse the switched mode regulators.
- 5. Examine the operation of inverter topologies with different PWM schemes.

5	3	2	-	-	-	-	-	-	-	-	-	-	-	1	3

Articulation Matrix

UNIT I

DC MACHINES

Generator and Motor - Construction - Principle of operation - Types - Characteristics - Armature reaction and commutation - Starting and Speed control - Various Testing - Braking - Applications.

UNIT II

SINGLE AND THREE PHASE INDUCTION MOTORS

Concept of Rotating Magnetic Field - Construction - Types of rotor - Need for starters - Methods of starting - Fully automated starters: DOL, Autotransformer, star delta starter - Rotor resistance starter - Methods of braking, Methods of Speed Control - V/f Control and Pole Changing Techniques.

UNIT III

STEPPER AND SERVO MOTORS

Construction and Principle of operation - Variable reluctance stepper motor, Permanent magnet stepper motor, Hybrid stepper motor, Static and dynamic characteristics, Driver circuit, AC and DC Servo Construction - Microcontroller based DC and AC Servo Control - Servo motor based feedback control - Application of AC and DC Servo Motors.

UNIT IV

PERMANENT MAGNET BRUSHLESS DC MOTOR

Permanent Magnet materials - Characteristics - Construction and principle of operation - Types - Difference between mechanical and electronic commutators - Microcontroller based control of PMBLDC motor in open loop.

UNIT V

POWER CONVERTERS FOR ELECTRICAL DRIVES

Control of DC motor using AC and DC Converters - Single Phase and Three Phase H - Control of AC and DC motors - PWM control of BLDC motor - Power Transistor based Motor Control.

EXPERIMENT 1

Design and develop a DC Motor Controller with Multiple Features of PWM Speed Control, Direct Speed Without PWM Speed Control (with slow Initialization), Forward/Reverse, and Sudden Brake for air compressors or vacuum cleaners.

EXPERIMENT 2

Design and develop Uni-Directional Conveyor by using Oriental Motor.

EXPERIMENT 3

Develop and simulate the DC chopper used in switched mode regulator power supply.

EXPERIMENT 4

Simulate the circuit in proteus for Controlling a DC motor using PWM and monitoring its Running status

EXPERIMENT 5

Develop a circuit for Velocity open-loop control using BLDC Motor.

EXPERIMENT 6

Simulate a circuit for 3 Servo Motor (3 LED) with Arduino in Tinkercad

EXPERIMENT 7

Design and develop a DC Motor Speed/RPM Controller Circuit for CPU fans

22ME303 ENGINEERING THERMODYNAMICS

Course Objectives

- To study the fundamentals of thermodynamics and zeroth law.
- To provide the knowledge on first law of thermodynamics.
- To impart the knowledge on second law of thermodynamics and entropy.
- To study the thermodynamic properties of pure substances and its phase change processes.
- To learn about gas power cycles and properties of gas mixtures.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply the basic concepts and zeroth law of thermodynamics.
- 2. Apply the first law of thermodynamics to closed and open systems.
- 3. Solve the problems related to cycles and cyclic devices using second law of thermodynamics.
- 4. Determine the thermodynamic properties of pure substances and its phase change processes.
- 5. Evaluate the air standard performance of heat engines and properties of gas mixtures.

Articulation Matrix

UNIT I

INTRODUCTION AND ZEROTH LAW OF THERMODYNAMICS

Macroscopic and Microscopic approaches, energy, heat, work. Thermodynamic system - Types, properties, functions, states, processes and cycle. Zeroth law of thermodynamics - Temperature scale, perfect gas scale.

UNIT II

FIRST LAW OF THERMODYNAMICS

First law of thermodynamics, Application of first law - Closed systems and Open systems, Thermodynamic processes in closed systems, Steady state flow processes in open systems.

UNIT III

SECOND LAW OF THERMODYNAMICS

Limitations of first law of thermodynamics, Second law of thermodynamics - Kelvin - Planck and Clausius statements, Reversible and irreversible processes, Carnot theorem, Carnot engine, Clausius inequality, Entropy, Availability and irreversibility. Heat Engine, heat pump and refrigerator.

UNIT IV

PROPERTIES OF PURE SUBSTANCES

Thermodynamic properties of fluids. Pure substance - Phases - Phase change processes, Steam tables and Property diagrams - (P-V), (P-T), (T-V), (T-S) and (h-s) diagrams. Ideal gas equation, Van der Waals equation and compressibility chart.

UNIT V

GAS MIXTURES AND GAS POWER CYCLES

Thermodynamics and properties of ideal gas mixture and perfect gas mixture - Dalton's law of partial pressure, Amagat's law. Psychrometric properties and processes - Psychrometric chart. Air standard cycles Otto, Diesel and Dual cycles - mean effective pressure and air standard efficiency.

22ME304 FLUID MECHANICS AND MACHINERY 3 0 2 4

Course Objectives

- To impart knowledge on the fluid properties and fluid statics principles
- To introduce the basic concept of fluid kinematics and dynamics
- To calculate the rate of flow and energy losses in flow through pipes and open channels
- To emphasize the concepts of boundary layer theory and the importance of dimensional analysis
- To impart the knowledge of pumps and turbines

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Explain the fundamental properties of fluids and methods of pressure measurement in fluid statics
- 2. Infer fundamentals of fluid kinematics and dynamics and their applications in hydraulic experiments
- 3. Apply the concept of the boundary layer, Dimensional analysis, and Modal analysis to the fluid structures
- 4. Assess the performance of a model by dimensional analysis and similitude
- 5. Compute the efficiency and performance of pumps and turbines

5	2	2	-	2	-	-	-	-	2	-	-	-	-	3	-

Articulation Matrix

UNIT I

FLUID PROPERTIES AND FLUID STATICS

Concept of Continuum, Properties of Fluid, Classification of fluids, Types of fluid flow Streamline, Streamlines, and path line, Pascal's Law and Hydrostatic Law, Pressure and its variation in a static Fluid, Measurement of fluid pressure Manometers, Buoyancy and meta-Centre, Stability analysis and applications

UNIT II

FLUID KINEMATICS AND DYNAMICS

Continuity equation, Velocity Potential and Stream function, Bernoulli's equation, and its applications, Impulse - Momentum principle, Impact of Jet, Velocity triangle

UNIT III

FLOW THROUGH PIPES AND CHANNELS

Laminar and turbulent flows in circular pipes, Major and Minor losses in pipes, Darcy Weisbach equation, Hagen Poiseuille equation, Multi reservoir problems, pipe network design, Types of open Channel flows, Measurement of discharge in open channels, Notches, Most economical channel section.

UNIT IV

DIMENSIONAL ANALYSIS AND MODEL TESTING

Buckingham's Pi theorem and Application of theorem in fluid flow Reynolds, Froude, and Mach number and their applications in model testing, Boundary layer thickness, Momentum integral equation, Drag and lift, Separation of the boundary layer, and Methods of preventing the boundary layer separation

UNIT V

HYDRAULIC MACHINES

Centrifugal pumps, Work done, Head developed, Pump output and Efficiencies, priming - minimum starting speed, performance of multistage pumps, Cavitation, methods of prevention, Pump characteristics, Classification of hydraulic turbines, Pelton wheel, Francis turbine, Kaplan and turbines, Specific speed, Performance characteristics, Selection of turbines, Turbine efficiencies

EXPERIMENT 1

Find the coefficient of discharge by suitable device that is most accurate to measure the fuel and air distribution in the carburetor of an IC engine in a two wheeler Also, in Pasteurization and Sterilization process. Discuss the effects of the Reynolds number and friction factor in relation to the rate of flow

EXPERIMENT 2

Analyze the friction factor of various pipes in a distribution of a water supply for domestic applications

EXPERIMENT 3

Determine the coefficient of discharge by suitable device used to monitor and control the flow of water and chemicals in water treatment plants

EXPERIMENT 4

Analyze the Lift and drag force of an aerofoil design used in a windmill for power generation

EXPERIMENT 5

Conduct the performance test of a suitable turbine that is used to extract energy from waterfalls whose water drops down from a height of about 500 m to generate power in Hydropower station

9 Hours

8 Hours

9 Hours

9 Hours

EXPERIMENT 6

Conduct the test from which electricity is to be generated has its reservoir fully filled up during the rainy season and the level drops down during summer. A turbine has to be put up such that it can accommodate both cases in a hydropower station.

EXPERIMENT 7

Determine the efficiency of a pump to pump water to a very high elevation, say >300 ft, and high viscous fluid used for an irrigation and Chocolate Industry.

Total: 75 Hours

6 Hours

22ME305 ENGINEERING MECHANICS 3104

Course Objectives

- To make the students to apply static equilibrium of rigid bodies both in two dimensions and also in three dimensions.
- To comprehend the effect of friction on equilibrium.
- To understand the geometrical properties of surfaces and solids.
- To understand various terms involved in Projectiles.
- To apply dynamic equilibrium of particles in solving basic problems.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Explain the different principles of mechanics and to solve engineering problems dealing with forces.
- 2. Apply the concepts of friction to solve various problems dealing with friction.
- 3. Explain the different geometrical properties of various sections.
- 4. Solve problems in rigid body dynamics (kinematic systems).
- 5. Solve problems in rigid body dynamics (kinetic systems).

Articulation Matrix

UNIT I

9 Hours

INTRODUCTION TO MECHANICS AND FORCE CONCEPTS

Principles and Concepts - Laws of mechanics - system of forces - resultant of a force system – Lami's theorem - moment of a force – Varignon's theorem - resolution of a force into force and couple - force in space - equilibrium of a particle in space.

UNIT II

BASIC STRUCTURAL ANALYSIS ANDFRICTION

Beams and types of beams - Simple Trusses - Method of Joints - Method of Sections. Friction resistance - classification of friction - laws of friction - angle of repose - cone of friction - free body diagram equilibrium of a body on a rough inclined plane - non concurrent force system - ladder friction - rope friction - wedge friction - virtual work method.

UNIT III

GEOMETRICAL PROPERTIES OF SECTION

Centroids - determination by integration - moment of inertia - product of inertia - principal moment of inertia of plane areas - radius of gyration - Mass moment inertia of simple solids.

UNIT IV

BASICS OF DYNAMICS - KINEMATICS

Kinematics and kinetics - displacements, velocity and acceleration - equations of motion - rectilinear motion of a particle with uniform velocity, uniform acceleration, varying acceleration - curvilinear motion of particles - projectiles - angle of projection - range - time of flight and maximum height kinematics of rigid bodies.

UNIT V

BASICS OF DYNAMICS - KINETICS

Newton's second law of motion - D'Alembert's principle, dynamics equilibrium - work energy equation of particles - law of conservation of energy - principle of work and energy. Principles of impulse and momentum - equations of momentum - laws of conservation of momentum. Impact - time of compression, restitution, collision - co-efficient of restitution - collision of elastic bodies by direct central impact and oblique impact - collision of small body with a massive body - kinetic energy of a particle-kinetics of rigid body rotation.

22HS004 HUMAN VALUES AND ETHICS

Course Objectives

- Understand the concept of good values and comprehend the importance of value-based living.
- Recognize the culture of peace through education.
- Identify and apply the practices for value development and clarification.

Programme Outcomes (POs)

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Assess the importance of human values and ethics in life.
- 2. Execute the importance of harmonious living in a diverse society.
- 3. Analyze the sensitivity to the crying needs of society such as ungodliness, corruption, poverty, and suffering, and play a vital role in eradicating them.
- 4. Plan intellectually mature, morally upright, ethically correct, and spiritually inspired decisions.
- 5. Execute a correct balance between professional excellence and social commitment.

Articulation Matrix

UNIT I

COURSE INTRODUCTION - NEED, BASIC GUIDELINES AND ANALYSIS

Importance of Human Values & Ethics in 21st Century - Understanding the theory of basic human values and ethics -Openness to change -Self enhancement -Conservation -Self transcendence - Schwartz Value Survey: Self-Assessment

UNIT II

EMBRACING THE COMMON ETIQUETTE

 $Altruism-\ Integrity-Freedom-Justice-Honesty-Truthfulness-Responsibility-Compassion$

UNIT III

CONTINUOUS HAPPINESS AND PROSPERITY

6 Hours

2002

6 Hours

An overview on basic Human Aspirations- Understanding and living in harmony at various levels of life-Embracing self-love and wellness-Understanding harmony in the family and society

UNIT IV

UNIVERSAL HUMAN VALUES AND PROFESSIONAL ETHICS

Reflection on growing global multifold problems: poverty, pollution, hunger, disease, unemployment, caste system, child labour, gender equality, politics and violence. Understanding the challenges in cultural, personal, social, political, and economic environment

UNIT V

UNDERSTANDING HARMONY IN THE NATURE AND EXISTENCE - WHOLE EXISTENCE AS CO-EXISTENCE

Understanding the harmony in the Nature- Holistic perception of harmony at all levels of existence-Practice Exercises and Case Studies will be taken up in Practice Sessions

22HS005 SOFT SKILLS AND EFFECTIVE COMMUNICATION

Course Objectives

- Communicate proficiently in formal discussions at the workplace.
- Describe experiences and events, and briefly give reasons and explanations for opinions and plans.
- Interact with a degree of fluency and spontaneity that results in efficacious communication
- Convey agreement and disagreement in a polite but firm manner
- Communicate with coherence and imagination in both written and spoken formats

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Enhance confidence in expressing thoughts in grammatically proper language and etiquette in waiting for the opportunity to provide input.
- 2. Effectively communicate in English on formal occasions and proficiency in the use of link words and other discourse markers
- 3. Provide constructive feedback and file logical complaints.
- 4. Analyse the understanding of oral and written communication in real-world situations.
- 5. Apply the improved spelling and punctuation in writing and heightened understanding of tone, pitch and stress in oral formats.

CO No	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3

Articulation Matrix

UNIT I SELF-EXPRESSION

Group discussion/ Peer discussion - Communicating decisions and opinions - Tone, Pitch, Stress - Agreeing, Disagreeing, Suggesting, Speculating - Comparing and Contrasting - Comparatives and Superlatives - Discourse markers – Interjections - Decision making - Synthesis - Higher order thinking Group discussion/Peer discussion - Effective Communication Types of communication - Written vs Spoken - Contractions Intonation Stress Active voice - Question tags - Confidence and body language Guided writing- Outlining Main Points - Group discussion/Peer discussion - Avoiding common errors Reduction of MTI - Common errors - Barriers to communication Accent

UNIT II

CREATIVE EXPRESSION

JAM, Debate, Review writing, Social media posts Synonyms - Antonyms Cloze test Phrasal verbs Spotting errors Collocation - Commonly mispronounced

UNIT III

FORMAL EXPRESSION

Writing: Giving written feedback, Review writing, and Letter of complaint. Speaking: Giving constructive feedback and offering suggestions, asking for inputs, commenting politely on appropriate phrases - Giving written feedback, Review writing, and Letter of complaint. Critical reasoning - Modal verbs - Polite ways to express negatives

22ME309 MODELING AND SIMULATION LABORATORY

Course Objectives

- To provide the knowledge and skills to model mechanical components using geometric modeling software.
- To impart the knowledge for creating and drafting the three dimensional assembly models of a few automobiles using CAD Software.
- To provide the knowledge on generating the animation of 3D assembly models using CAD software.
- To provide the knowledge on rendering the three dimensional models using CAD software.
- To expose the knowledge to prepare the product catalogue and technical documents for the given components using software.

Programme Outcomes (POs)

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PSO1. Design, analyse and evaluate the performance of mechanical systems.

Course Outcomes (COs)

- 1. Demonstrate proficiency in modeling mechanical components using geometric modeling software.
- 2. Apply knowledge to create and draft three-dimensional assembly models of automobiles using CAD Software.
- 3. Generate animations of 3D assembly models effectively using CAD software.
- 4. Render three-dimensional models with precision and detail using CAD software.
- 5. Prepare product catalogues and technical documents for components proficiently using software.

Articulation Matrix

EXPERIMENT 1

Create a CAD model of speed reducer components for Chemical agitator

EXPERIMENT 2

Create a CAD model assembly and individual drafting of speed reducer assembly components by considering geometric and dimensions tolerance in each component used for the Chemical agitator

EXPERIMENT 3

Animate the motion of speed reducer assembly components and identify the clash detection between the assemblies while the Chemical agitator working.

EXPERIMENT 4

Prepare the CAD model of spark ignition in a four stroke gasoline engine component used in a 150CC Pulsar bike.

EXPERIMENT 5

Create a CAD model assembly and individual drafting of spark ignition in a four stroke gasoline engine assembly component by considering geometric and dimensions tolerance in each component used in a 150CC Pulsar bike.

EXPERIMENT 6

Construct the assembly model of spark ignition in a four stroke gasoline engine assembly component and animate the motion between the components used in a 150CC Pulsar bike.

EXPERIMENT 7

Prepare the rendering model of speed reducer assembly components and prepare a product catalogue for the Coal mining process.

22ME401 KINEMATICS AND DYNAMICS OF MACHINERY

Course Objectives

- To acquire the knowledge on mechanism and find the velocity and acceleration.
- To understand the concept of static and dynamic force analysis in mechanical components.
- To learn the cam mechanism and gear mechanism to transmit the motion.
- To learn the principles of turning moment, centrifugal Governor and Gyroscopic effects.
- To analyze the fundamental concept of vibration in shaft.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply the basic mechanics principles to draw the velocity and acceleration of the planer mechanism.
- 2. Analyze the static and dynamics forces of reciprocating parts and Apply the concept of balancing of masses in rotating shafts.
- 3. Apply the motion and power transmission elements in mechanical system.
- 4. Analyze the turning moment, characteristics of governors, and gyroscopic principle.
- 5. Analyze the vibration of the shaft.

5	3	2	2	-	2	-	-	-	-	-	-	-	-	2	-

Articulation Matrix

UNIT I

FUNDAMENTAL ANALYSIS OF MECHANISM

Basic terminology - Degree of freedom - Inversion of Four bar and slider crank mechanism - Velocity and acceleration analysis of mechanisms.

UNIT II

FLYWHEEL. GOVERNOR AND GYROSCOPE

Flywheel -Turning moment diagram, Governor - Types and characteristics of centrifugal governors, Gyroscopes - Applications in mechanical systems.

UNIT III

CAM, GEAR MECHANISMS AND FRICTION DRIVES

Introduction of cam and follower mechanism - Classification-Construction of cam profile, Gear -Terminology - Law of gearing, interference and undercutting, Gear Trains - Classification - Speed calculation - Frictional drives -Clutch and belts.

UNIT IV

FORCE ANALYSIS AND BALANCING

Static and Dynamic Force analysis of mechanism - Dynamics of reciprocating Engines - Balancing of rotating and reciprocating masses.

UNIT V

VIBRATION

Introduction to Vibration - Natural Frequency, Vibration of shafts and beams - Whirling of shafts -Torsional vibration of shaft.

EXPERIMENT 1

Identify the Steering mechanism used in a car also identify the velocity, acceleration of the Input and output link using CAD Software

EXPERIMENT 2

Analyze the cam profile for the four stroke internal combustion engine in a motor cycle.

EXPERIMENT 3

Analyze the type of gear train utilized in the power transmission system of an automobile.

EXPERIMENT 4

Ensure the balancing of hydraulic turbine rotating components for efficient energy conversion

EXPERIMENT 5

Identify the performance of the equipment which help to maintain the stability and orientation in the ships, and submarines.

EXPERIMENT 6

Determine the critical speed of a centrifugal pump used for irrigation applications

EXPERIMENT 7

Perform the analysis of the natural frequency of the shock absorbers in motorcycles.

22ME402 SENSORS AND TRANSDUCER

3024

Course Objectives

- To understand the concepts of calibration, characteristics and response of transducers
- To impart knowledge in the construction and characteristics of various electrical transducers
- To familiarize about different transducers and sensors

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Examine the type of errors, characteristics and mathematical model of a transducer
- 2. Apply the characteristics of variable resistive transducer in a given application
- 3. Analyze the principles of variable inductive transducer
- 4. Characterize the different capacitive transducers for the measurement of physical quantities
- 5. Identify various transduction methods used for field applications

Articulation Matrix

UNIT I

CHARACTERISTICS OF INSTRUMENTS

Units and Standards - Static calibration- Classification of errors -Error analysis -Limiting error -Probable error -Static characteristics-Accuracy, Precision, Resolution, Sensitivity, Linearity, Hysteresis, Range and Span, Drift, Dead Zone- Dynamic characteristics and order of the systems -Transducers classification

UNIT II

VARIABLE RESISTANCE TRANSDUCERS Principles of operation - Construction details -Characteristics of resistance transducers -Resistance

potentiometers -Strain gauges -Resistance thermometers - Thermistors- Hot wire anemometer -Piezoresistive sensor

UNIT III

VARIABLE INDUCTANCE TRANSDUCERS

Induction potentiometer -Variable reluctance transducers -Linear Variable Differential Transformer-LVDT Pressure transducer- Rotary Variable Differential Transformer-Eddy current transducers, synchro's and resolvers

UNIT IV

VARIABLE CAPACITIVE TRANSDUCERS

Variable air gap type - Variable area type - Variable permittivity type - Feedback type capacitance proximity pickup - Capacitor microphone

UNIT V

OTHER TRANSDUCERS

Piezoelectric transducer- Ultrasonic transducer, magnetostrictive transducer, fiber optic transducers, hall effect transducers, photoelectric transducers, and humidity sensor, Digital transducer.

EXPERIMENT 1

Design and construct an electronic pressure gauge with 7 segment LED display for a compressor system

EXPERIMENT 2 6 Hours Design and construct a thermometer to measure the temperature in the water geyser

EXPERIMENT 3 6 Hours Speedometer for two wheeler application using Hall Effect Transducer

EXPERIMENT 4

Design and construct a weighing machine for the kitchen using strain gauge and load cell.

EXPERIMENT 5

Design and construct a light intensity meter in a closed room using optical transducers

2124

Course Objectives

- To provide knowledge on structures subjected to axial and thermal loads
- To familiarize about two-dimensional stress systems and theories of failure
- To construct shear force, bending moment diagrams and evaluate the bending stress in beams under transverse loading
- To impart knowledge on finding slope, deflection of beams and buckling of columns for different boundary conditions
- To familiarize about stresses on shafts and helical springs based on theory of torsion

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Find the stress distribution and strains in regular and composite structures subjected to axial load
- 2. Evaluate the compound stresses in two dimensional systems and thin cylinder
- 3. Assess the shear force, bending moment and bending stresses in beams under transverse loading
- 4. Evaluate the slope and deflection of beams and buckling loads of columns under different boundary conditions
- 5. Apply torsion equation in design of circular shafts and helical springs

Articulation Matrix

UNIT I

 \mathbf{C}

SIMPLE STRESS AND STRAIN

Mechanical properties of Materials. Stress-strain curve - Factor of safety. Strain Energy and Impact Loading. Stepped and Composite bars - Axial Stresses, Thermal Stress and Volumetric Stresses - Elastic constants and their relationship.

UNIT II

COMPOUND STRESSES AND THIN CYLINDER

State of stresses at a point, 2D Stress System, Plane Stress Condition, Mohr's circle. Thin Cylinders - Stresses, Strain, Maximum Shear stress, Changes in dimensions and volume. Theories of Failure - Significance and Graphical Representations.

UNIT III

SHEAR FORCE, BENDING MOMENT AND STRESSES IN BEAMS

Beams - Types of supports, loads and beams, Shear force and Bending Moment in Cantilever, simply supported and overhanging beams, Point of contra flexure. Theory of Simple Bending, Section modulus, Bending stress and stress variation along the length and section of the beam.

UNIT IV

DEFLECTION OF BEAMS AND COLUMNS

Slope and Deflection of cantilever and simply supported beams by Double integration method and Macaulay's method. Theory of Columns - Slenderness ratio, End Conditions, Equivalent length, Euler and Rankine's formula.

UNIT V

TORSION IN SHAFT AND HELICAL SPRING

Theory of Torsion, Stresses and Deformations in Solid and Hollow Circular Shafts, Combined bending moment and torsion of shafts, Power transmitted to shaft, Shaft in series and parallel. Close coiled helical spring - Stresses, deflection, Maximum shear stress in spring section including Wahl's Factor, Springs in series and parallel.

EXPERIMENT 1

Assess the hardness of material to be used as brake shoe in bicycle to give long life with minimum wear

EXPERIMENT 2

Select a material to be used as brake cable in a bicycle such that the material is able to withstand axial tensile load and identify the mode of failure

6 Hours

6 Hours

6 Hours

6 Hours

6 Hours

6 Hours

84

EXPERIMENT 3

Assess the suitability of material as bicycle handle to withstand bending load using deflection beam apparatus

EXPERIMENT 4

Select a material to be used as bicycle fork such that the material is able to withstand axial compressive loading and identify the mode of failure

EXPERIMENT 5

Assess the suitability of material for fabricating LPG gas cylinders to withstand internal gas pressure using thin cylinder test setup

EXPERIMENT 6

Assess the suitability of material as nail for wooden furniture fabrication withstanding impact load of hammer

EXPERIMENT 7

Assess the suitability of material as a) compression spring for bicycle seat and b) tensile spring for bicycle stand to withstand axial load

EXPERIMENT 8

Select a material to be used as bicycle wheel shaft such that it is able to withstand torsion load

Tutorial: 15 Hours

Total: 75 Hours

22ME404 INDUSTRIAL AUTOMATION WITH PLC 2124

Course Objectives

- To learn about industrial automation and its principles.
- To study about various types of pneumatic components and servo system.
- To impart knowledge on fluid power circuit design.
- To learn about the basics of PLC and its need for industrial automation.
- To learn the PLC programming for industrial automation.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Apply the principles and strategies of industrial automation to enhance production systems.
- 2. Analyze and select appropriate pneumatic components for designing automation systems.
- 3. Design a pneumatic circuit for various industrial automation applications.
- 4. Apply the architecture and functionalities of PLCs in industrial automation systems.
- 5. Develop the PLC programming for various industrial automation applications.

5	3	1	3	1	3	-	-	-	-	-	-	1	2	-	2

Articulation Matrix

UNIT I

INDUSTRIAL AUTOMATION

Introduction to automation in production system, Types of production system, Principles and strategies of automation, Basic elements of an automated system, Advanced automation functions, Levels of automations, Automated flow lines with storage buffers, Automation for material handling, Conveyor systems, Automated guided vehicle (AGV) systems and Rail guided vehicle (RGV), Automated storage/retrieval systems, Industry 4.0.

UNIT II

FLUID POWER COMPONENTS AND SERVO SYSTEMS

Sources of hydraulic power, Pump classification and its performance, Control valves, Actuators. Sources of pneumatic power, FRL unit, Control valves, Actuators. Servo systems - Hydro mechanical servo systems, Electro hydraulic servo systems and Proportional valves.

UNIT III

PNEUMATIC CIRCUITS

Fluid Power Circuit Design - Speed control circuits, Synchronizing circuit, Sequencing circuit, Regenerative circuit, Fail safe circuit, Hydro pneumatic circuit, Sequential circuit design for simple applications using cascade method, Fluid power circuits - Failure and trouble shooting.

UNIT IV

PROGRAMMABLE LOGIC CONTROLLER

Architecture of PLC, CPU IO modules power supply and communications, Input and output devices, Need of PLC for industrial automation, Types of PLC models, Communications - Types, Uses, Protocols, Architecture flow.

UNIT V

PLC PROGRAMMING

Types of programming languages, Ladder logic diagram, Examine On/OFF, Timer, Counter, Input -Output Addressing, Data manipulation and other higher level programming instruction with case studies.

EXPERIMENT 1

Develop a pneumatic circuit for an automatic door opening and closing system using a double-acting cylinder.

EXPERIMENT 2

Design a pneumatic circuit for the polishing machine that requires the reciprocating motion of a double-acting cylinder.

EXPERIMENT 3

Develop a speed control circuit for hydraulic table feed on a surface grinder.

EXPERIMENT 4

Design and develop an electro pneumatic circuit by cascade method for the punching press application.

EXPERIMENT 5

Develop the water tank level control system using ladder logic for household applications.

22ME405 MATERIALS AND MANUFACTURING PROCESSES

Course Objectives

- To study the crystal structure and heat treatment process of metals
- To study the properties and applications of various metals and alloys used in engineering industries.
- To study the properties and applications of metals and manufacturing process
- To study the properties and applications of polymers and manufacturing process
- To study the properties and applications of ceramics and manufacturing process

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Use phase diagrams and apply heat treatment techniques to materials.
- 2. Examine engineering metals, classify alloys, and apply them in engineering.
- 3. Apply casting, welding, forging, extrusion, and forming techniques.
- 4. Select the suitable manufacturing process to produce the plastic components
- 5. Classify ceramics and apply processing techniques in manufacturing.

C O No	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3

5	2	-	-	-	-	-	-	-	2	2	-	-	2	-	-

Articulation Matrix

UNIT I

PHASE DIAGRAMS AND HEAT TREATMENT

Solids solutions and alloys, Gibbs phase rule, Crystal structure, Unary and binary eutectic phase diagram, Isomorphous diagram- Iron - Carbon phase diagram. Heat Treatment - Annealing, Normalizing, Hardening and Tempering, Isothermal transformation diagrams.

5 Hours

2023

UNIT II

ENGINEERING METALS AND ALLOYS

Engineering materials - Classification of steel and cast iron microstructure, Alloy steels - Effect of alloying elements on steel, Types-Stainless steel, High strength low alloy (HSLA) steel, Maraging, Tool steels. Nonferrous metals- Aluminium, copper, Magnesium and Titanium alloys, Properties and applications

UNIT III

METAL MANUFACTURING PROCESSES

Casting-Classification, sand casting process, special casting process - Die casting, centrifugal casting and investment casting. Welding process ad its classifications - Arc welding-SMAW, GMAW, GTAW, FCAW. Resistance welding-Spot, butt and seam. Forging process - Open and close dies forging, Extrusion, Drawing - Principles operation and types. Special forming process - Hydro forming, Rubber pad forming, Explosive forming

UNIT IV

POLYMER MANUFACTURING PROCESS

Polymers - Classifications of polymers, Thermo plastic Properties and applications (Polyethylene, Poly propylene, Polystyrene, Poly vinyl chloride, Acrylic, Nylon and Teflon). Thermo set Properties and applications (Polyester, Epoxy, Phenolic, Urea and Phenol formaldehydes). Manufacturing process - Injection moulding, Compression moulding, Blow Moulding, Extrusion - Principle, operations and applications.

UNIT V

CERAMIC MANUFACTURING PROCESS

Ceramics - Classifications, Traditional ceramics, Engineering ceramics - Properties and applications of Al2O3, SiO2, SiC, Si3N4, TiO2, ZrO2. Processing of ceramics- Sintering, Hot and Cold isostatic pressing, chemical vapour deposition, Slip casting-Principle, operations and applications.

EXPERIMENT 1

Prepare the steel samples for a hardenability test to find the hardness of the steel material for the cutting tool application.

EXPERIMENT 2

Prepare the steel samples for microstructural observation to classify the steel for household application.

EXPERIMENT 3

Develop a mould for casting to make aluminium parts.

EXPERIMENT 4

Fabrication of steel using MMAW, TIG and MIG welding for structural application.

EXPERIMENT 5

Make a sheet metal Box L Bracket and U channel using shearing and bending operations for the AC ventilation system.

EXPERIMENT 6

Make a cup-shaped product for beverage application

22HS007 ENVIRONMENTAL SCIENCE

200NC

Course Objectives

- Understand the interdisciplinary and holistic nature of the environment
- Identify the significance of natural resources and environment on the quality of life and stimulate the quest for sustainable development
- Assess the socio-economic, political and ethical issues in environmental science

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. **Course Outcomes (COs)**

1. Apply principles of natural resource management to analyze exploitation cases in forestry, water, minerals, and agricultural sectors, assessing their environmental impacts.

- 2. Analyze the different types of ecosystems and biodiversity, its values and also role of professionals in protecting the environment from degradation
- 3. Analyze the existing environmental challenges related to pollution and its management
- 4. Analyze the impacts of unsustainable practices, waste management, climate change, and water conservation on environmental sustainability

5. Analyze the impact of population and human activities on environment

5	2	-	-	-	-	-	-	-	-	-	-	-	-	-	-

UNIT I

NATURAL RESOURCES

Forest resources: Use - over exploitation - deforestation - case studies. Water resources: Use - over utilization of surface and ground water - conflicts over water. Mineral resources: Use - exploitation - environmental effects of extracting and using mineral resources - case studies. Food resources: Effects of modern agriculture - fertilizer-pesticide problems (eutrophication, blue baby syndrome, biomagnification). Energy resources: renewable (solar, wind, and hydro).

UNIT II

ECOSYSTEMS AND BIODIVERSITY

Concept of an ecosystem: Structure and function of an ecosystem - producers - consumers - decomposers - food chains - food webs and ecological pyramids - Types of ecosystem: Introduction - characteristic features: desert ecosystem. Biodiversity - value of biodiversity - threats to biodiversity - endangered and endemic species - Conservation of biodiversity: In-situ and ex-situ conservation of biodiversity.

UNIT III

ENVIRONMENTAL POLLUTION

Pollution: Definition - causes - effects - control measures of air pollution - water pollution : (Sewage water treatment by activated sludge and trickling filter process) - noise pollution- thermal pollution. Disaster management: causes - effects - control measures of floods - earthquake

UNIT IV

SOCIAL ISSUES AND ENVIRONMENT

Sustainable development : Definition - Unsustainable to sustainable development - solid waste management - causes - effects - 5R Principles (landfills, incineration, composting). Water conservation - rain water harvesting - watershed management. Climate change - global warming - acid rain - ozone layer depletion. E-waste

UNIT V

HUMAN POPULATION AND ENVIRONMENT

Human population: Population growth - characteristics - variation among nations - population explosion - value education - HIV / AIDS. Role of information technology in environment and human health - occupational safety and health administration (OSHA)

22HS008 ADVANCED ENGLISH AND TECHNICAL EXPRESSION

Course Objectives

- To enable students to achieve proficiency in academic writing
- Effectively use the language to persuade others
- Appreciate the nuances of the language and engage an audience
- Use advanced tools of language to improve communicative competence
- Prepare for professional demands at the workplace
- Give concrete expression to the plans and goals

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Infer the clarity in articulating the objectives and aims and improved proficiency in using the English language
- 2. Communicate effectively and with good interpersonal skills; speak in public, engage the audience, and lead a group discussion
- 3. Critically evaluate the ethics of persuasive appeals and confidence to influence opinion
- 4. Analyse a specific piece of information; take in what is read, and use good writing techniques with proper grammar and syntax in all formal situations
- 5. Create awareness and empathy to emotional signals in communication

Articulation Matrix

UNIT – 1 - CREATIVE EXPRESSION

15 Hours

0021

Proposals & Grant applications, Argumentative essays & editorials, Sales Pitches, Campaigning, Commercials/advertisements, effectively answering the famous interview question: 'Why should we hire you?' Sentence and paragraph formation - Rhetorical questions - Emphasis & effective repetition - Empathetic expression, knowing the audience, capturing attention - Creating Memes, Comic Strips, Stand-up comedy, Caption writing, and Limericks, Vocabulary and slang words for comedy - Similes & Metaphors - Homophones, homonyms, alliteration, wordplay

UNIT 2 - FORMAL EXPRESSION

Writing: Action plans, Cover letters, Mind-Mapping, Paragraph writing Logical reasoning - SVA -Advanced level - Style: Clarity, Concision, Coherence, Evocativeness, Efficacious Vocabulary -Conditional Clause - Be verbs- Tenses- advanced - Opening and closing sentences - Action plans, Anecdotal references, order of communication/ narration, complete communication- Wh-questions -Effective beginning and closing - Rhetorical questions - Appraising target audience - Pronunciation, Enunciation, Tone, Pace and Volume. - Writing: SOPs, Research Objectives, Thesis Statement, Indexing, Scholarly Articles, Academic Writing, Executive Summary, Survey Questionnaires, Citations and Bibliography - Reading: Quantitative & qualitative analysis, Analysis and paraphrasing of reference materials Speaking: Commentate live events, give instructions to operate machines/ conduct experiments Listening: Informational listening, Reflective listening, - Discriminative listening - Connective words - Prefixes and Suffixes - Quoting and paraphrasing Proofreading -Directed writing and writing formats - Note taking - Active verbs

tern
Weightage(%)
100
NA

Course Objectives

- To develop Problem-Solving Skills
- To enhance Research and Analytical Abilities
- To promote Social Responsibility and Ethical Awareness

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2.Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes (COs)

The students will be able to

- CO1 Interact with society conduct a field surveys and identify societal issues.
- CO2 Analyze societal problems using engineering principles.
- **CO3** Develop plan and provide optimal solutions for social issues using their engineering knowledge and skills.
- CO4 Prepare comprehensive reports on their findings and proposed solutions.
- **CO5** Enhance the social responsibility and ethical considerations in engineering.
- CO6 Develop community interaction and managerial skills

Articulation Matrix

Students have to interact with society, conduct a field survey and identify the issues / problems available in the society. Analyze the issues using engineering knowledge, skills and attitude and provide the optimal solutions to solve the social issues and submit the report.

Total 40 Hours

22ME501 MECHATRONICS

Course Objectives

- To understand the basic knowledge of Microprocessor in mechatronics systems.
- To impart knowledge on working of microcontroller in mechatronic systems.
- To learn the concepts and methods of microcontroller interfacing with hardware.
- To study the functions and interfacing methods of Arduino in mechatronics system.
- To impart the programming of Arduino used in mechatronics system.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Apply the architectural features of the 8085 microprocessor to construct timing diagrams and develop assembly language programs.
- 2. Analyze the architectural features of the 8051 microcontroller to classify instructions and design basic interfacing circuits.
- 3. Construct and simulate interfacing methods for I/O devices, serial communication, ADC/DAC, and integrated circuits using the 8051 microcontroller.
- 4. Examine the pin configurations, platform features, and programming environment of Arduino to model basic hardware-software integration.
- 5. Design and implement Embedded C programs for interfacing Arduino with sensors, actuators, and communication modules.

Articulation Matrix

UNIT I

MICROPROCESSOR

Introduction to 8085 microprocessor- 8085 Architecture -Instruction set - Addressing modes - Timing diagrams - Assembly language programming - Stack - Interrupts.

UNIT II

MICROCONTROLLER

Introduction to 8051 microcontroller - Architecture of 8051 - Instruction set - Moving data, Logical, Arithmetic operation, Jump & call instruction, LCD & Keyboard Interfacing.

UNIT III

INTERFACING AND PROGRAMMING

Memory interfacing - Interfacing I/O devices - Interfacing Serial I/O (8251) - Parallel I/O (8255) - Keyboard / Display controller (8279) - ADC/DAC interfacing - Inter Integrated Circuits interfacing.

UNIT IV

ARDUINO

Introduction to Arduino - Pin configuration and architecture - Device and platform features - Concept of digital and analog ports - Familiarizing with Arduino Interfacing Board. Arduino and programming software and Hardware Architecture, Integrated development environment of Arduino (IDE).

UNIT V

MECHATRONICS SYSTEM

Introduction to Embedded C and Arduino platform - Basic functions - Interfacing with sensors, Electromechanical control of servomotor and stepper motor, Interfacing with Bluetooth module.

EXPERIMENT 1

Develop a virtual encoder interface with a DC motor to demonstrate real-time position monitoring of robotic arm to optimize path tracing.

EXPERIMENT 2

Develop the tracking control program for servo motors in position tracking of solar panels..

EXPERIMENT 3

Use Arduino Uno to implement conditional operation for garage car washing sequence.

EXPERIMENT 4

Connect the IR sensor to the Arduino and ensure proper orientation and alignment of object transport.

EXPERIMENT 5

Design and development of the program to interface the Arduino for Intelligent home locking system..

EXPERIMENT 6

Design and develop the program to interface the Arduino for Intelligent water level management system.

22ME502 DESIGN OF MACHINE ELEMENTS

3104

Course Objectives

- To learn the design procedure of machine elements subjected to steady, variable loads, and simple mechanisms.
- To provide knowledge on the design of joints and flanged, bushed pin type couplings.
- To study the design of helical, torsional, leaf springs and design of sliding and rolling contact bearings.
- To learn the design procedure of spur, worm gears and design of wire rope.
- To learn design of shaft and design of gearbox.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications

Course Outcomes (COs)

- 1. Formulate and analyze stresses and strains in mechanical components subjected to various loads.
- 2. Design the welded joints and couplings subjected to various load.
- 3. Analyze and design mechanical springs and bearings.
- 4. Design power transmission systems Spur, Worm Gears, and flexible belt drives.
- 5. Analyze and design the components for power transmission like shaft and gearbox.

Articulation Matrix

UNIT I

DESIGN PROCESS AND MECHANISM

Introduction to Design process - Materials Selection - Design for Steady and Variable loading -Bending stress in curved beams. Design of Geneva mechanism, Ratchet and pawl mechanism.

UNIT II

DESIGN OF JOINTS AND COUPLINGS

Design of bolted joints - stresses due to static and eccentric loading. Design of welded joints -Strength of parallel and transverse fillet weld. Design of Couplings - Flanged and bushed pin type coupling.

UNIT III

DESIGN OF SPRINGS AND BEARINGS

Introduction and terminology - Design of springs - helical, torsional and leaf springs subjected to static and fatigue loads. Introduction - types and selection criteria - Design of Bearings - sliding contact and rolling contact bearings.

UNIT IV

DESIGN OF DRIVE SYSTEMS

Need for power transmission - Design of gears - Spur and Worm Gears, Force analysis, Tooth stresses, and Failure. Introduction of flexible elements - Design of wire rope.

UNIT V

DESIGN OF TRANSMISSION ELEMENTS

Design of Shafts based on strength and rigidity. Design of Gear Box - types, standard step ratio, Ray diagram, Kinematics layout, Calculation of number of teeth and overlapping speed.

22ME503 THERMAL ENGINEERING

2124

Course Objectives

- To study the components, fuels, Pollutant and performance of internal combustion engines.
- To provide knowledge on Power plant cycles and steam nozzles
- To integrate the concepts, laws and methodologies from the first course in thermodynamics into analysis of Cogeneration and waste heat recovery
- To impart knowledge on air compressors and Ventilation
- To apply the thermodynamic concepts into refrigeration and air conditioning systems.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PSO2 Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Recognize the components, fuels, pollutants and compute the performance of internal combustion engines
- 2. Resolve the problems involving steam power cycles and steam nozzles.
- 3. Illustrate the working of Cogeneration and waste heat recovery process
- 4. Exemplify the air compressor and Ventilation system used in HVAC.
- 5. Estimate the capacity of refrigeration and air conditioning system.

5	2	2	2	-	2	-	2	-	-	-	-	-	-	2	-

Articulation Matrix

UNIT I

INTERNAL COMBUSTION ENGINES

Internal combustion engines - Types, Working and Performance. Fuels - alternate fuels, Octane and Cetane Number. Pollutant control techniques, Norms.

UNIT II

POWER PLANT CYCLES AND NOZZLE

Gas turbine power plant cycle - Brayton cycle, and Modification. Steam power plant cycle - Rankine cycle, and modifications. Nozzles- shapes of nozzles, effect of friction, critical pressure ratio.

UNIT III

COGENERATION AND WASTE HEAT RECOVERY

Cogeneration Principles - Cycle analysis - Applications - source and Utilization of waste heat systems - Heat exchangers - Economic analysis.

UNIT IV

AIR COMPRESSORS AND VENTILATION

Reciprocating compressor - single stage, multi stage. Rotary compressors - Types, Working. Ventilation - Need, threshold limits, ventilation rates, methods.

UNIT V

REFRIGERATION AND AIR-CONDITIONING

Vapour compression refrigeration cycle - superheat, sub cooling, performance calculations. Vapour absorption system. Psychormetric - Process, Chart - Air conditioning systems-Split, VRV/VRF and central.

EXPERIMENT 1

Select and propose suitable valve opening and closing angles and times for a four-stroke diesel well engine and bike two-stroke petrol engine.

EXPERIMENT 2

Select and propose suitable lubricating oils (2T oil, SAE2040 oil, coconut oil, and neem oil) based on flash and fire point and viscosity for two-stroke and four-stroke two-wheeler engine.

EXPERIMENT 3

Select, propose, and install, suitable pollution control techniques for 4-stroke diesel engines and investigate their emissions.

EXPERIMENT 4

Prepare a biodiesel for a 4-stroke diesel engine and investigate its performance of 4-stroke diesel engines.

EXPERIMENT 5

Propose a suitable compressor for vehicle spray painting applications and investigate its performance.

EXPERIMENT 6

Propose a suitable air conditioner for a seminar hall (Size 40'*40') and investigate its performance.

EXPERIMENT 7

Propose a suitable refrigeration system for food preservation and investigate its performance.

22ME504 MACHINING AND METROLOGY

3024

Course Objectives

- To learn the metal cutting theory, measure the forces acting on the single point tool and calculate various forces involved in it.
- To familiarize about the construction, working and operations working skills for making simple components in centre lathe. Also provide working skill and knowledge on construction and working of milling and gear cutting machines
- To impart the knowledge on working of drilling, boring machines and provides working skill in drilling machines and fine finishing processes and to provide working skills in grinding machines.
- To learn the method of linear and angular measurements and provides working skill in suitable devices.
- To provide knowledge on form measurements using suitable instruments and advances in metrology for linear geometric dimensions.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Explain the metal cutting theory and calculate the various forces acting on the lathe turning tool using Merchant circle.
- 2. Select and explain the suitable machine like lathe milling and gear cutting machines based on the application and make simple components using these machines.
- 3. Choose the suitable drilling machine, finishing process based on the application and produce simple components using grinding machines
- 4. Practice the appropriate linear and angular measurements using precision measuring instruments.
- 5. Examine the major terminologies for screw thread, gear and roundness measurement and apply the advanced techniques in metrology to calculate the geometric dimensions.

Articulation Matrix

UNIT I

a

METAL CUTTING THEORY

Introduction - Orthogonal, Oblique Cutting and types of chip formation. Mechanisms of metal cutting - Chip thickness ratio and Shear plane. Merchant's Circle - Deriving the forces, calculations. Cutting tool - Properties and materials, wear. single point tool nomenclature, tool life and its calculations. cutting fluids - properties.

UNIT II

LATHE, MILLING MACHINE AND GEAR CUTTING MACHINES

Introduction - Types- Centre Lathe - Specification, operations. Mechanisms - Thread cutting. Work holding devices. Milling - Introduction, types, specifications, up milling, down milling and operations. Indexing - simple and differential indexing methods. Gear cutting-gear milling, gear shaper and gear hobbing machine.

UNIT III

DRILLING, BORING MACHINES AND FINISHING PROCESSES

Drilling - Introduction, types, specifications, construction of universal drilling machine, types of drills and nomenclature of twist drill. Introduction to horizontal boring machine. Finishing processes -Grinding - Introduction and Types. grinding wheel- selection, glazing, loading, dressing and truing. Fine finishing processes - Honing, lapping, buffing and super finishing.

UNIT IV

LINEAR AND ANGULAR MEASUREMENTS

Introduction - Basics of metrology - Linear Measuring Instruments: Vernier Caliper, Vernier Height and Vernier Depth Gauge, Inside, Outside and Depth Micrometer, Slip Gauge, Limit Gauge -Mechanical Comparator - Angular Measurements: Bevel protractor, Sine bar, Autocollimator

UNIT V

FORM MEASUREMENTS

Thread Measurement: Terminologies, Errors - Pitch Gauge, Tool Maker's microscope - Gear Measurement: Terminologies, Errors, Gear Tooth Vernier caliper, Profile Projector - External and Internal Radius measurements - Roundness measurement - Straightness and Flatness Measurement. Coordinate Measuring Machine: Basic concept, Types, Constructional features, Probes, Accessories -Surface Roughness Measurement - Machine Tool Metrology.

EXPERIMENT 1

Perform the suitable machining operation to reduce the diameter and to improve the surface finish for the circular shaft used in pumps.

9 Hours

9 Hours

9 Hours

4 Hours

9 Hours

EXPERIMENT 2

Select the suitable machining operation to reduce the length of the given component and improve the surface finish of the shaft used in automotive drive shafts.

EXPERIMENT 3

For the flange coupling assembly used in conveyor systems, four holes are required with PCD 72mm by using the suitable machining operations to make the required holes.

EXPERIMENT 4

Enlarge the diameter of the drilled holes for the shaft used in steering columns of automobiles with the suitable machining operations.

EXPERIMENT 5

Make the required steps for fabricating the spur gear by reducing the diameter of the given component for the gear train application.

EXPERIMENT 6

Measure the dimensions and its tolerance to ensure the product quality to be used in turbine assembly.

EXPERIMENT 7

Develop the flange coupling to transmit power in compressor by the suitable machine tool alignment of lathe/milling/drilling machine.

22ME507 MINI PROJECT

0021

Course Objectives

- Identify the problem statement and apply the engineering concepts to find the solution.
- Improve the analysing capability of the students.
- Increase the exuberance in finding the solution to various problems.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2 Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Formulate a real world problem, identify the requirement and develop the design solutions.
- 2. Identify technical ideas, strategies and methodologies
- 3. Utilize the new tools, algorithms, and techniques that contribute to obtaining the solution of the project.
- 4. Test and validate through conformance of the developed prototype and analysis of the cost-effectiveness.
- 5. Prepare the report and present oral demonstrations.

22ME508 ADVANCED MODELING LABORATORY

Course Objectives

- To expose the knowledge on the surface modeling with rendering & sheet metal components for preparation of product design with catalogue.
- To model the weldments structure using special tools with preparation of fabrication drawing.
- To perform the shape optimization study to reduce the weight for comparative study.
- To apply the knowledge of generative shape design for finding the best design with preparation of product catalogue.
- To obtain the knowledge on static stress analysis report for the given component to find the failure analysis and study the injection molding time study.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12: Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Create surface modeling with rendering & sheet metal components for preparation of product design with catalogue.
- 2. Analyse the weldments structure using special tools with preparation of fabrication drawing.
- 3. Impart the knowledge on shape optimization study to reduce the weight for comparative study.
- 4. Create the generative shape design for finding the best design with preparation of product catalogue.
- 5. Analyse the static stress analysis report for the given component to find the failure analysis and study the injection molding time study.

C

EXPERIMENT 1

Prepare the three dimensional model, rendering of the hair dryer using the surface module and prepare a product catalogue.

EXPERIMENT 2

Build an enclosure for the heat pump using the sheet metal module and prepare the drafting and prepare a product catalogue.

EXPERIMENT 3

Generate the 3D model of frame structure using the weldments module and prepare a fabrication drawing.

EXPERIMENT 4

Create a Shape Optimization study to optimize the shape of a robot gripper arm and reduce the material by 40 percentage and catalogue with comparison study.

EXPERIMENT 5

Design the given 3D model and apply the generative shape design then select the best solution for manufacturing the product design and prepare a product catalogue for business marketing.

EXPERIMENT 6

Prepare the Static Stress Analysis of a Connecting Rod Assembly and analysis report generation.

EXPERIMENT 7

Create a mold and die for the injection molding component and study the injection timing, gate location, and solidification of the plastic component.

22ME601 HEAT AND MASS TRANSFER

2124

Course Objectives

- To familiarize conduction heat transfer mechanisms
- To expose the mechanisms of free and forced convection
- To develop the shape factor algebra for black body radiation and grey body radiation
- To demonstrate the phase change heat transfer and calculate the performance of heat

exchanging devices

• To explain diffusion and convective mass transfer.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Solve problems in conduction heat transfer with aid of partial differential equations and electrical analogy.
- 2. Analyze correlations for determining the heat transfer rate in free and forced convection.
- 3. Evaluate the heat transfer rate in radiation processes by use of shape factor algebra and electrical analogy.
- 4. Integrate concepts of phase change heat transfer and evaluate the thermal performance of heat exchangers using the LMTD or NTU methods.
- 5. Evaluate the mass transfer rate in diffusion and convective mass transfer applications.

Articulation Matrix

UNIT I

CONDUCTION

Introduction - Steady State Conduction in one and two - dimensional systems. Composite systems. Extended surfaces.

UNIT II

CONVECTION

Basic concepts - Heat transfer coefficients, Boundary layers. Forced convection - External and Internal flows, correlations, Natural convection.

UNIT III

RADIATION

Basic laws of radiation - Black body radiation - Grey body radiation - Shape factor algebra - Electrical analogy - Radiation shields.

UNIT IV

PHASE CHANGE HEAT TRANSFER AND HEAT EXCHANGERS

Boiling: Modes - correlations. Condensation: Nusselt theory, correlations. Heat exchangers: heat exchanger analysis, LMTD and Effectiveness - NTU Method.

UNIT V

MASS TRANSFER

Diffusion mass transfer - Fick's law of diffusion, Steady state molecular diffusion. Convective mass transfer- correlations.

EXPERIMENT 1 Measure the thermal conductivity of the metal bar	3 Hours
EXPERIMENT 2 Determine the transient heat exchange efficiency of the slab	3 Hours
EXPERIMENT 3 Estimate the heat transfer from a cylinder losing heat to the environment	4 Hours
EXPERIMENT 4 Analyze the heat transfer by blowing air over the pipe	4 Hours
EXPERIMENT 5 Measure the temperature of the surface without contact	4 Hours
EXPERIMENT 6 Analyze the parameters required to enhance or promote surface condensation	4 Hours
EXPERIMENT 7	4 Hours

Determine heat transfer in heating systems during the exchange of heat

5 Hours

7 Hours

7 Hours

6 Hours

EXPERIMENT 8

4 Hours

Determine the overall heat transfer co-efficient for a fluidized bed heat transfer to enhance the efficiency of industrial heat exchanger systems in chemical or energy processes

Tutorial: 15 Hours

Total: 75 Hours

22ME602 FINITE ELEMENT ANALYSIS 2124

Course Objectives

- To impart basic knowledge in finite element method.
- To provide knowledge in 1D elements.
- To provide knowledge in 2D elements.
- To study heat conduction problems using finite element method.
- To provide knowledge in higher order and isoparametric elements.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Apply the numerical methods to formulate the simple finite element problems.
- 2. Apply the one-dimensional finite element method to solve bars, beams, and trusses.
- 3. Apply finite element method for plane stress, plane strain and axisymmetric conditions
- 4. Determine the temperature distribution of one dimensional and two dimensional heat transfer problems using finite element methods
- 5. Apply the numerical methods to formulate the higher order and isoparametric problems

C O No	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3

Articulation Matrix

UNIT I

INTRODUCTION

6 Hours

Relevance and scope of finite element methods - strain vs displacement relations - stresses and equilibrium - natural and essential boundary conditions - Rayleigh-Ritz - Galerkin method - FEM procedure - Discretisation of domain-element shapes, types, size, location, and numbers.

UNIT II

ONE-DIMENSIONAL (1D) ELEMENTS

Coordinate system types - global, local and natural. Shape function of 1D bar element - Finite element formulation - stiffness matrix, load vector, boundary condition and assembly of global equation - 1D bar element and two node truss element - problems in the 2D truss. Introduction to beam element.

UNIT III

TWO-DIMENSIONAL (2D) ELEMENTS

Shape function for linear triangular element - Finite element formulation - Constant Strain Triangular (CST) element - plane stress, plane strain. Axisymmetric elements - problems.

UNIT IV

HEAT TRANSFER APPLICATIONS

Shape function for 1D and 2D triangular element heat conduction - stiffness matrix, load vector and assembly of the global equation. 1D and 2D triangular element heat conduction, heat generation with convective boundary conditions for the linear element.

UNIT V

HIGHER ORDER AND ISOPARAMETRIC ELEMENT

Selection of order of polynomial-linear, simplex, complex and multiplex elements. Mesh refinement methods and convergence requirements. Iso, Sub and Super parametric element. Shape functions for a 2-D four noded and eight noded Isoparametric rectangular element - natural coordinate system problems. Gaussian quadrature method - problems.

EXPERIMENT 1

Design and implement stress, strain, and deformation results to assess the structural integrity and performance of a cycle frame.

EXPERIMENT 2

Evaluate the simulation results to assess the safety, reliability, and performance of bridge trusses.

EXPERIMENT 3

Model and simulate underwater vehicle electronic hull structures using ANSYS Mechanical APDL.

EXPERIMENT 4

Develop finite element models for propeller shafts in all-terrain vehicles using ANSYS Mechanical APDL.

EXPERIMENT 5

Evaluate the impact of thermal stress on the structural integrity of the disc brake..

EXPERIMENT 6

Assess the dynamic behaviour of railway tracks under operational and environmental conditions

2023

22ME603 COMPUTER AIDED MANUFACTURING

Course Objectives

- To impart the knowledge on CNC programming basics, interfacing and communication.
- To introduce programming of CNC turning center.
- To introduce programming of CNC machining center.
- To provide knowledge on generic steps of Additive Manufacturing technique.
- To learn the concept and applications of liquid and solid based AM processes.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Outline the various concepts in CNC programming and communication.
- 2. Compute the programs to manufacture components in CNC turning center.
- 3. Compute the programs to manufacture components in CNC machining center.
- 4. Parse the generic steps and classification of Additive Manufacturing processes.
- 5. Predict the suitable AM process to fabricate metallic components.

5	1	-	-	-	1	-	-	-	-	-	2	-	1	-	1

UNIT I

CONSTRUCTIONAL FEATURES OF CNC

Types of CNC Machines and Constructional features. Cutting Tool Inserts - Materials, Classification, Nomenclature and Selection - Tool holders and Work holding devices - Coordinate system - Structure of a part program - G Codes, M Codes - Programming for FANUC and SIEMENS controller. Graphical user interface - Communication protocol.

UNIT II

PROGRAMMING OF CNC TURNING CENTRE

Single pass and canned cycle - Turning, facing and threading - Multi-pass canned cycle - rough and finish turning, facing, boring, pattern repeating, threading, drilling, peck drilling, high speed drilling cycle, grooving - Subprogram.

UNIT III

PROGRAMMING OF CNC MACHINING CENTRE

Machining cycles - Linear and circular interpolation, Contouring, rectangular and circular pocketing, drilling, peck drilling, high speed drilling, tapping, boring, back boring, counter boring.

UNIT IV

INTRODUCTION TO ADDITIVE MANUFACTURING

Distinction between AM and CNC Machining - CAD Model - Input file formats - Generation and Conversion - Classification of RP. Reverse Engineering - Application of CMM, Laser scanner, CT and MRI scan in acquiring point data - Software for STL file processing.

UNIT V

LIOUID. SOLID AND POWDER BASED SYSTEMS

Stereolithography Apparatus, Continuous Liquid Interface Production, Fused Deposition Modelling and Laminated Object Manufacturing. Selective Laser Sintering, Electron Beam Melting and Laser Engineered Net Shaping and concept of open source 3D printer - Working Principle, Construction, Materials and Applications.

EXPERIMENT 1

Simulate a custom shaft with tapered ends for use in automotive steering systems or robotic arms.

EXPERIMENT 2

Program and simulate NC machining for creating threaded connections on a pipe fitting used in water pipelines or gas supply systems.

EXPERIMENT 3

Simulate drilling and boring operations for creating cylinder head components with precise boreholes for engines or compressors.

EXPERIMENT 4

Simulate and program for creating cam profiles or gears used in machinery or mechatronic systems.

EXPERIMENT 5

Design and contour mill a complex mold cavity used in injection molding for producing plastic parts like smartphone casings.

22ME607 MINI PROJECT II

0021

Course Objectives

- Identify the problem statement and apply the engineering concepts to find the solution.
- Improve the analysing capability of the students.
- Increase the exuberance in finding the solution to various problems.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Formulate a real world problem, identify the requirements, and develop the design solutions.
- 2. Identify technical ideas, strategies, and methodologies.
- 3. Utilize the new tools, algorithms, and techniques that contribute to obtaining the solution of the project.
- 4. Test and validate through conformance of the developed prototype and analysis of the cost-effectiveness.
- 5. Prepare the report and present oral demonstrations.

22ME701 INDUSTRIAL ROBOTICS

2023

Course Objectives

- To learn the construction and fundamentals of robots.
- To provide knowledge on types of drives and end effectors in robots.
- To impart knowledge on sensors and machine vision system.
- To study the kinematics of robots and its programming method.
- To provide knowledge on the applications of robots in industries.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Analyze the components and construction of a robot manipulator, including its joints, links, and specifications.
- 2. Select and design appropriate drive mechanisms and end effectors for industrial robots, considering gripper types and force analysis.
- 3. Choose and evaluate sensors and machine vision systems for industrial robots, integrating them into robotic systems for improved functionality.
- 4. Compute forward and inverse kinematics solutions, and construct programming algorithms for robotic manipulation using DH representation.
- 5. Evaluate robotic applications in industrial environments, including machining, welding, assembly, and material handling, and plan their implementation.

B.E. - MECH | Minimum Credits to be earned: 164 | Regulations 2022

5	3	3	3	-	3	1	-	-	-	-	-	2	2	1	2

Articulation Matrix

UNIT I

FUNDAMENTAL OF ROBOTICS PROCESS

Robot anatomy - Definition, law of robotics, History and Terminology of Robotics - Accuracy and repeatability of Robots - Simple problems - Specifications of Robot - Speed of Robot - Robot joints and Links - Robot classifications - Architecture of robotic systems.

UNIT II

END EFFECTORS AND ROBOT CONTROLS

Mechanical grippers - Slider crank mechanism, Screw type, Rotary actuators, cam type - Magnetic grippers - Vacuum grippers - Pneumatic grippers - Gripper force analysis - Gripper design - Simple problems - Feedback devices - Encoder, Resolver, LVDT.

UNIT III

ROBOT KINEMATICS AND PROGRAMMING

Representation of Rigid body motion - DH Representation - Forward Kinematics, Inverse Kinematics and Differences; Forward Kinematics and Reverse Kinematics of Manipulators with Two, Three Degrees of Freedom (In 2 Dimensional) - Derivations and Problems.

UNIT IV

ROBOT PROGRAMMING

Teach Pendant Programming, Lead through programming, Robot programming Languages - ABB-Rapid Programming - Basics data types - Variables and Constants-Operators - Flow control. KUKA robot - KRL programming - Basic principle of motion programming - KRL syntax - Robo simulation software - Robo analyser software.

UNIT V

IMPLEMENTATION AND APPLICATION

Implementation of Robots in Industries - Various Steps - Application of robots in machining - Welding - Assembly - Material handling - Loading and unloading - hostile and remote environments - Inspection and future application.

EXPERIMENT 1

Study of various types of robots.

EXPERIMENT 2

Geometric Modelling: As an example of a geometric modelling system a SCARA robot is modelled in a common modelling language using an industrial robot simulation system.

22ME702 IoT FOR AUTOMATION

2023

Course Objectives

- To Study the fundamentals about IoT.
- To analyze the various protocols of IoT with application development
- To analyze the architecture and framework of IoT Controllers& Cloud Platforms.
- To evaluate the diverse applications of IOT
- To apply IoT for industry and security management applications

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply the IoT fundamentals.
- 2. Analyse the various protocols of IOT deployed in applications.
- 3. Design the IoT platform using Raspberry Pi.
- 4. Execute IoT in desperate applications
- 5. Develop IoT concepts for industry applications and security management

Articulation Matrix

UNIT I

GENESIS OF IOT

Things in IoT - Sensors - Actuators- Smart Objects, Sensor Networks - Communication criteria for connecting Smart Objects - Communication models and APIs - IoT levels and Deployment templates - IoT Security and Challenges, Emerging IoT flavours

UNIT II

IOT ARCHITECTURES AND PROTOCOLS

A Simplified IoT Architecture - Core IoT Functional Stack - Architecture for IoT using mobile technologies - Mobile Technologies for Supporting IoT Ecosystem - Low Power Wide Area Networking Technologies - Infrastructure and Service Discovery protocols - Device Integration protocols

UNIT III

IOT PLATFORMS AND PROGRAMMING

Embedded computing basics - Microcontroller - System on Chips - Arduino, Beagle Bone Black, Rasberry Pi Interfaces - Programming Rasberry Pi with Python - Developing code for writing to Actuators, Blinking LED, Reading from Sensors, Light Switch

UNIT IV

DATA ANALYTICS AND CLOUD

An Introduction to Data Analytics for IoT - Role of Machine Learning - Big Data Analytics Tools and Technology - Edge Streaming Analytics and Network Analytics - Cloud Technology. IoT and Cloud inspired smarter environments - Case Studies: Smart and Connected Cities, Healthcare, Agriculture

UNIT V

INDUSTRIAL IOT AND SECURITY

Introduction to Industrial IoT - Understanding the Industrial IoT Process - Industrial Data Flow and Devices - Security management of an IoT ecosystem - Case studies: Manufacturing- oil and gas -Power utility industry

22ME707 PROJECT WORK I

Course Objectives

- Work in teams to propose, formulate, and solve a challenging open-ended design problem of significant scope, depth, and breadth.
- Understand and incorporate engineering standards and multiple realistic constraints, within realistic design time, budget, and performance objectives.
- Develop a prototype of the proposed design and demonstrate the prototype in accordance with the specifications.
- Effectively communicate information relating to all aspects of the design process in written, oral, and graphical form.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Formulate a real-world problem, identify the requirements, and develop the design solutions.
- 2. Identify technical ideas, strategies, and methodologies.
- 3. Utilize the new tools, algorithms, and techniques that contribute to obtaining the solution of the project.
- 4. Test and validate through conformance of the developed prototype and analysis of the cost-effectiveness.
- 5. Prepare the report and present the oral demonstrations.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Formulate a real-world problem, identify the requirement, and develop the design solutions.
- 2. Apply the technical ideas, strategies, and methodologies.
- 3. Utilize the new tools, algorithms, and techniques that contribute to obtaining the solution of the project.
- 4. Test and validate through conformance of the developed prototype and analysis of the cost-effectiveness.
- 5. Prepare the report and present the oral demonstrations.

Articulation Matrix

22HS201 COMMUNICATIVE ENGLISH II

Course Objectives

- Command over the English language for day-to-day transactions.
- Improve listening and reading skills
- Increase ability to comprehend complex content
- Enhance confidence in expressing with clarity and elegance
- Enthusiastic and reflective use of the language through sufficient and focused practice
- Articulate fluently and confidently in challenging situations

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

Course Outcomes (COs)

- 1. Engage with the English language in functional contexts
- 2. Express in both descriptive and narrative formats
- 3. Use effectively the English Language in Business contexts
- 4. Actively read and comprehend authentic text
- 5. Express opinions and communicate experiences.

C O No	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3
1	-	-	-	-	-	-	-	-	3	3	-	3	-	-	-
2	-	-	-	-	-	-	-	-	3	3	-	3	-	-	-

5	-	-	-	-	-	-	-	-	3	3	-	3	-	-	-

Articulation Matrix

UNIT I

SELF-EXPRESSION

Personal Goals and Values - Being a Team Player-Expressing strengths and Weaknesses-Abstract nouns -Adjectives-Active Listening Skills-Note Making-Pronunciation and Accent Personal goals and values - Reading for Gist and Details-Professional Ethics-Reported Speech- Conjunctions Reading skills - phonemics, word/phrase recognition, sight words Personal Goals and Values-Conditional clauses- Hypothetical questions and Answers-Sentence Structure-Simple Present Tense-Perfect tense

15 Hours

1022

UNIT II CREATIVE EXPRESSION

Instructive and Expository Expression - Creating brochures, catalogues, and manuals for products/ services, Giving directions, Process writing, Sequencing experiments, Concept Explanation-Reported Speech-Voice Sentence Equivalence-Proofreading

UNIT III

FORMAL EXPRESSION

Notices and Announcements-Writing: Creating notices and circulars for events, announcing college tours and lost and Found-Varied Vocabulary - Gender Sensitive Vocabulary, Non-discriminatory Vocabulary, Concise Vocabulary-Paragraph writing - Effective titles, topics and supporting sentences, calling in registrations and queries. Effective communication- Understanding purpose, reach and target audience, achieving complete communication Punctuation - Capitalization, Numeration, Use of proper nouns and Articles-Spelling-Reading: Analyzing and interpreting notices and Circulars-Understanding the gist of short real-world notices, and messages. Culling out keywords Information words vs Supporting words-Interpreting Abbreviations, Acronyms and Shortforms-Listening: Analyzing and interpreting announcements Decoding - Screening for salient points-Note making-Raising queries for clarification-Speaking: Announcements-Giving complete information-Pronunciation and Enunciation Pace, Intonation, and Pitch-Conducting Events-Speaking: Master of ceremonies, Short speeches - welcome speech, the vote of thanks/ valedictory speech, award-acceptance speech Writing: Invitations, Preparation of script/draft after interviewing someone. Adjectives-Pronunciation/ Punctuation Precision and Concision-Politeness markers

Total: 45 Hours

22HSH01 HINDI

1022

Course Objectives

- To help students acquire the basics of Hindi
- To teach them how to converse in Hindi on simple day- to -day situations
- To help students understand a simple technical text in Hindi

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Construct simple sentences and use vocabulary required for day- to -day conversation.
- 2. Distinguish and understand the basic sounds of Hindi language.
- 3. Apply appropriate grammar to write and speak in Hindi language
- 4. Comprehend the conversation and give correct meaning
- 5. Take up Hindi examinations conducted by Dakshin Bharat Hindi Prachar Sabha

Articulation Matrix

22HSG01 GERMAN

1022

Course Objectives

- To help students appear for the A1 level Examination •
- To teach them how to converse fluently in German in day-to-day scenarios •

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Listen and identify individual sounds of German
- 2. Use basic phonemes and words while speaking
- 3. Read and understand short passages on familiar topics
- 4. Use basic sentence structures while writing
- 5. Illustrate basic grammar and appropriate vocabulary in completing language tasks

Articulation Matrix

C O No	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3

22HSJ01 JAPANESE

1022

Course Objectives

- To train students for N5 Level Examination
- To teach them use basic Japanese sentences in day-to-day conversation
- To make students familiar with the Japanese cultural facets and social etiquette

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Recognize and write Japanese alphabet
- 2. Speak using basic sounds of the Japanese language
- 3. Apply appropriate vocabulary needed for simple conversation in Japanese language
- 4. Apply appropriate grammar to write and speak in Japanese language
- 5. Comprehend the conversation and give correct meaning

Articulation Matrix

UNIT I

SELF INTRODUCTION / DEMONSTRATIVES / NOUN MODIFIERS

Introduction to Japanese Japanese script - Pronunciation of Japanese(Hiragana (Katakana) Long vowels - Pronunciation of in,tsu,ga -Letters combined with ya,yu,yo - Daily Greetings and Expressions Numerals. Speaking: Self Introduction - Listening: Listening to Greetings, Listening to specific information: Numbers, Time

UNIT II

TIME EXPRESSION / VERBS - PAST

Introduction to time -Introduction of verbs -Listening to specific information

UNIT III

ADJECTIVES

Word Sentence -Introduction to Adjectives -Technical Japanese Vocabulary -Pair Activity Day to day situational conversation. Listening to Japanese Alphabet Pronunciation -Simple Conversation

9 Hours

9 Hours

UNIT IV

CONJUGATION OF II ADJECTIVE

Past tense of Noun sentences and Na adjective sentences -Past tense of ii adjective sentences -houga adjective desu -Technical Japanese Vocabulary -Individual Activity - Listening to conversation with related particles

UNIT V

CONJUGATION OF VERBS - TE FORM / TA FORM / NAI FORM / PLAIN FORM

N gahoshidesu - V masu form tai desu - Verb te form - Technical Japanese Vocabulary -Listening to different Counters, simple conversations with verbs and adjectives

22HSF01 FRENCH

1022

Course Objectives

- To prepare the students for DELF A1 Examination
- To teach them to converse fluently in French in day-to-day scenarios

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Course Outcomes (COs)

- 1. Help students acquire familiarity in the French alphabet & basic vocabulary
- 2. Listen and identify individual sounds of French
- 3. Use basic sounds and words while speaking
- 4. Read and infer short passages on familiar topics
- 5. Interpret and use basic grammar and appropriate vocabulary in completing language tasks

Articulation Matrix

22ME001 CONCEPTS OF ENGINEERING DESIGN 3003

Course Objectives

- To provide knowledge on fundamental engineering principles and problem identification.
- To acquire knowledge about concept generation and concept selection.
- To learn the detailed design process and design of manufacture and assembly.
- To impart knowledge on planning for manufacture and design review.
- To impart knowledge on report preparation and intellectual property right.

Programme Outcomes (POs)

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Use the engineering design principles and problem identification techniques for product development.
- 2. Select suitable concept to design effectively for various engineering problems.
- 3. Model the detailed design process and design for manufacture and assembly.
- 4. Make process plan for production based on quality function deployment and value engineering.
- 5. Construct the concept sketch and scheme drawing for report preparation and intellectual property right.

C O No	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3

5	-	-		-	2	-	-	-	-	-	-	-	-	2	-

Articulation Matrix

UNIT I

PRINCIPLES AND PROBLEM IDENTIFICATION

Engineering design- introduction and definition, Considerations of a good design, Engineering design interfaces, Principles of engineering design, Problem identification, Design process, Product Design Specification (PDS) criteria, Content of a PDS, Codes of ethics, Solving ethical conflicts.

UNIT II

CONCEPT GENERATION AND SELECTION

Identifying customer needs, Benchmarking, Societal considerations in engineering, Creativity and problem solving, creativity methods - Brainstorming, Morphological analysis, Concept selection - Subjective decision-making, Criteria ranking, Criteria weighting, Datum method, Computer aided decision making.

UNIT III

DESIGN PROCESS

Detailed description of design process, Design Drawings, Computer Aided Engineering, Designing of standards, Concurrent Engineering, Human Factors in Design, Design for manufacturing (DFM), Design for Assembly (DFA), Industrial design, Design for environment, engineering design principles.

UNIT IV

PLANNING FOR MANUFACTURE

Quality function deployment (QFD), Quality Assurance, Design review, Value analysis/engineering, Factor of safety, Materials selection, break even analysis - problem, cost evaluation, Elements of cost, ISO concepts, Classification of Manufacturing Process.

UNIT V

REPORT PREPARATION AND INTELLECTUAL PROPERTY RIGHTS

Presentation Techniques - Introduction, Concept sketches, Scheme drawing, Design Validation, Design report. Intellectual Property Rights - Introduction, Patent, Trademark, copyright, Patentability, Non patentable, patenting process, forms for filing patents.

22ME002 COMPOSITE MATERIALS AND MECHANICS 3003

Course Objectives

- To provide fundamental knowledge in reinforcement and matrix materials.
- To impart knowledge on polymer matrix composites.
- To expose the characteristics and different fabrication techniques on polymer and metal matrix composites.
- To impart knowledge on ceramic matrix composites.
- To provide knowledge on the micro mechanism of composites.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Examine the suitable reinforcement and matrix materials for different applications.
- 2. Select appropriate fabrication technique for specific application of polymer matrix composite.
- 3. Select suitable processing method for the fabrication of metal matrix composites.
- 4. Analyze suitable fabrication method for specific application of ceramic matrix composite.
- 5. Compute the mechanics involved in composite material.

Articulation Matrix

B.E. - MECH | Minimum Credits to be earned: 164 | Regulations 2022

UNIT I

INTRODUCTION TO COMPOSITES

Fundamentals of composites, characteristics, need for composites, Enhancement of properties, Reinforcements - glass fibers, boron fibers, carbon fibers, organic fibers, aramid fibers, ceramic fibers, oxide and nonoxide fibers, Forms of reinforcements - Roving, Woven fabrics, Non woven, random mats, whiskers, Matrix materials - Polymers - Thermosetting resins, thermoplastic resins , Metals, Ceramic materials

UNIT II

POLYMER MATRIX COMPOSITE

Processing of polymer matrix composites- hand lay-up, Spray lay-up processes, Compression molding-SMC Reinforced reaction injection molding, Resin transfer molding, Pultrusion, Filament winding, Applications of polymer matrix composites.

UNIT III

METAL MATRIX COMPOSITES

Characteristics of MMCs, Various types of Metal matrix composites, Advantages and limitations of MMCs, Effect of reinforcements on properties-Volume fraction - Rule of mixtures, Processing of MMCs - Liquid state processing- stir casting, squeeze casting, infiltration, solid state processing - Powder metallurgy, Diffusion bonding, In-situ processes, applications of MMCs.

UNIT IV

CERAMIC MATRIX COMPOSITES

Need for CMCs, Processing of CMCs- cold pressing and sintering, hot pressing, infiltration, chemical vapor deposition and chemical vapor impregnation, sol-gel and polymer pyrolysis, high temperature synthesis properties and applications in aerospace and space fields. Introduction to carbon matrix composites.

UNIT V

MECHANICS FAILURE ANALYSIS AND DESIGN

Characteristics of Fiber-reinforced Lamina-Laminates- Interlaminar stresses-Static Mechanical Properties-Fatigue and Impact Properties-Failure Predictions-Failure Theories-Laminate Design Consideration-Classical lamination Theory-Analysis of Laminated Composite Beams- Plates - Shells Vibration and Stability Analysis- Finite Element Method of Analysis-Analysis of Sandwich structures.

22ME003 COMPUTER AIDED DESIGN3003

Course Objectives

- To provide knowledge of fundamentals of CAD and geometric transformations.
- To understand the various geometric modeling concepts
- To identify the common visual realism algorithms.
- To impart the knowledge on parts assembly logics and consideration factors.
- To study the available data exchange formats for CAD model transportation.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Use the fundamentals of CAD and geometric transformation concepts.
- 2. Examine the various representations of geometric curves, surfaces and solids.
- 3. Show the importance of visual realism algorithms.
- 4. Compute the significant factors in computer aided assembly.
- 5. Design the geometrical model data exchange and transfer CAD Models between various platforms.

UNIT I

FUNDAMENTALS

Introduction to CAD/CAM/CAE, Graphics Input devices-cursor control Devices, Digitizers, Keyboard terminals, Image scanner, Speech control devices and Touch, panels, Product cycle, Sequential and Concurrent Engineering, CAD - Architecture, Tools, applications - Coordinate systems - Two and Three-dimensional Transformations - Translation - Scaling - Reflection - Rotation, Windowing - clipping and Viewing, Orthographic and perspective projections.

UNIT II

CURVES AND GEOMETRIC MODELING

Representation of curves, Properties of curve design and representation, - Hermite, Bezier, B-Spline and rational curves, Surface Modeling, surface patch, Bezier and B spline surface. Fundamentals of Solid Modelling, Boundary representation and Constructive Solid Geometry, Sweep representation, Comparison of wireframe, surface and solid models, Basic application commands for 2D drafting software like AutoCAD & 3D solid modeling software like Solidworks, Autodesk Inventor, PTC Creo, Catia etc.

UNIT III

VISUAL REALISM

Graphics display devices, Cathode Ray Tube, Random & Raster scan display, Color CRT monitors, Direct View Storage Tubes, Flat Panel display, Hard copy printers and plotters, Coherence types. Hidden line removal algorithm, Priority and Area oriented algorithms. Hidden Surface removal algorithm, Depth buffer and Warnock''s algorithms. Hidden solid removal algorithm, Ray Tracing algorithm, Shading and Coloring, types. Computer Animation.

UNIT IV

ASSEMBLY MODELING AND ADVANCED MODELING TECHNIQUES

Assembly modeling, Interference of Positions and orientations, CAD Tolerance Analysis, geometrical Mass Properties, degree of freedom, Constraints and Simulation concepts. Introduction to freeform modeling, rendering, generative design, technical drawing.

UNIT V

DATA EXCHANGE FORMATS

Database Management System, CAD Standards, File types, DXF, STL, STEP, IGES, PDES, PARASOLID, ACIS, Data, Database Structures, Types. Communication Standards, Data Exchange between CAD/CAE/CAM Systems, Requirements for the Exchange, Exchange Methods.

FOR FURTHER READING

Graphics manipulation and Editing, Parametric Representation of Synthetic Curves, Applications of CAD in FEM.

Total: 45 Hours

22ME004 MECHANICAL VIBRATIONS

Course Objectives

- To learn the fundamental concept of vibration of a single degree of freedom (DOF) system.
- To expose knowledge on vibration of Two DOF systems.
- To expose knowledge on vibration of the Multi- DOF system.
- To learn the governing equation of vibration of continuous systems.
- To describe various instruments and control methods used in vibration analysis.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Use the basic elements of vibration of Single Degree of Freedom (SDF) systems.
- 2. Calculate the natural frequency of vibration of Two Degree of Freedom (TDF) systems.
- 3. Examine the natural frequency of vibration of Multi Degree of Freedom (MDF) systems.
- 4. Compute vibration analysis for the vibration of continuous systems.
- 5. Select suitable instruments and control methods for measurement and control of vibration.

Articulation Matrix

UNIT I

 \square

SINGLE DEGREE OF FREEDOM (SDF)

Fundamentals of vibration. Single Degree of Freedom - Responses of undamped free vibration - Viscous damping - Damped free vibration - Reponses of undamped forced vibration and damped forced vibration - Response of damped system under base excitation - Rotating unbalance.

UNIT II

TWO DEGREE FREEDOM SYSTEM (TDF)

General equation of motion - Principal mode of vibration - Coordinate coupling - Orthogonolity principle - Rectilinear and torsional systems - Natural frequencies of undamped free vibration systems - Equations of motion for forced vibrations and damped free vibration - Dynamic vibration absorber - Lagrange"s equation

UNIT III

MULTI-DEGREE FREEDOM SYSTEM (MDF)

Modelling of MDF systems by equations of motion from Newton''s law - Influence coefficients - Stiffness coefficients and Generalised coordinate - Eigenvalue problems and solution. Approximate methods in MDF, Dunkerley''s method, matrix iteration method, Rayleigh''s and Holzer''s method.

UNIT IV

VIBRATION OF CONTINUOUS SYSTEMS

Introduction - Transverse vibration of string - axial vibration of a rod - Torsional vibration of shaft - Lateral vibration of beam - Rayleigh's Method and Rayleigh-Ritz method.

UNIT V

VIBRATION MEASUREMENT AND CONTROL

Vibration Measuring Devices: seismometer, accelerometer and velometers-Vibration exciters: mechanical, hydraulic, electromagnetic and electrodynamic-Frequency measuring instruments: single reed, multi reed and stroboscope. Vibration meters and sound level meters. Signal conditioning devices: Filters, Amplifiers, Modulators/Demodulators, ADC/DAC. Signal analysis devices. Vibration recording and display devices

22ME005 ENGINEERING TRIBOLOGY 3003

Course Objectives

- To impart basic knowledge on friction and wear
- To provide knowledge on behavior of surface contacts
- To learn about frictional behavior of sliding and rolling contacts
- To learn the wear mechanisms and its consequences under different contact conditions
- To identify the appropriate lubrication method based on contact conditions

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Use the fundamental concepts of friction and wear
- 2. Apply the appropriate surface contact characteristics for particular applications
- 3. Apply the characteristics of friction for tribological applications
- 4. Analyze the wear mechanism and measure wear rate
- 5. Select suitable lubrication type for particular application

Articulation Matrix

UNIT I INTRODUCTION

Introduction to Tribology, Factors influencing Tribological phenomena, Properties of materials relevant to friction and wear.

UNIT II

CONTACT BEHAVIOUR OF SURFACE

Engineering surfaces - Surface characterization, Contact of engineering surfaces: Hertzian and nonhertzian contact, Contact pressure and deformation in non-conformal contacts.

UNIT III

FRICTION

Causes of friction, Stick-slip friction behavior and friction instability, sliding and rolling friction, frictional heating and temperature rise, Friction measurement techniques.

UNIT IV

WEAR AND ITS MEASUREMENT

Wear and wear types, Mechanisms of wear, wear of metals and non-metals. wear models - asperity contact, constant and variable wear rate, geometrical influence in wear models, wear damage, wear measurement and controlling techniques.

UNIT V

LUBRICATION

Lubricants- physical and chemical properties, types of additives. Selection of lubricants, Hydrodynamic lubrication-principle and application, Reynolds equation. Elastohydrodynamic Lubrication- Principle and application, pressure - viscosity term in Reynolds equation, Hertz theory, Ertel-Grubin Equation.

22ME006 FAILURE ANALYSIS AND DESIGN

3003

Course Objectives

- To familiarize with various failure modes and examine the failed components
- To study the fractures in materials and compare the different theories of fractures
- To analyse the dynamic fracture and determination of fracture toughness values
- To know importance of tribology in the design, friction, wear, and wear measurements
- To predict the failure modes and the principles of utilizing the tools for failure analysis

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Show the common engineering failure mechanisms
- 2. Analyze the mechanics of fracture and different theories of fractures
- 3. Compute the dynamic fracture toughness of materials
- 4. Analyze the wear failure and wear measurement techniques
- 5. Compute the technique, tools and procedure of root cause failure analysis and failure mode effective analysis

5	3	3	3	1	2	-	-	-	-	-	-	2	3	-	-

Articulation Matrix

UNIT I

MATERIALS AND DESIGN

Introduction, causes of failures, classification, steps in failure analysis, tools, sample selection and treatment, materials analysis, equipment, Metallography, commonly used NDT methods. Effect of component geometry and shape factors, designing with high strength and low toughness materials, designing for hostile environments; Materials selection in design; Processes and their influence on design, systematic process selection.

UNIT II

FRACTURE MECHANICS

Ductile fracture, brittle fracture, cleavage-fractography, ductile-brittle transition, fracture mechanics approach to design-energy criterion, stress intensity approach; Time dependent crack growth and damage; Linear elastic fracture mechanics: Griffith theory, energy release rate, instability and R-curve, stress analysis of cracks-stress intensity factor, K-threshold, crack growth instability analysis, crack tip stress analysis; Elastic plastic fracture mechanics: Crack tip opening displacement (CTOD), J-integral, relationship between J and CTOD.

UNIT III

FRACTURE TOUGHNESS

Dynamic fracture, rapid loading of a stationary crack, rapid crack propagation, dynamic contour integral, creep crack growth-C Integral, viscoelastic fracture mechanics, viscoelastic J integral; Determination of fracture toughness values: Experimental determination of plane strain fracture toughness, K- R curve testing, J measurement, CTOD testing.

UNIT IV

WEAR FAILURES

Types of wear, different methods of wear measurement, analysis of wear failures, wear at elevated temperatures, wear of different materials, role of friction on wear, stick slip friction, creep, stress rupture, elevated temperature fatigue, environment induced failure.

UNIT V

FAILURE ANALYSIS TOOLS

Reliability concept and hazard function, life prediction, life extension, application of Poisson, exponential and Weibull distributions for reliability, bath tub curve, parallel and series systems, MTBF, MTTR, FMEA-design FMEA, process FMEA, analysis of causes of failure modes, ranks of failure modes; Fault tree analysis; Industrial case studies on FMEA.

22ME007 DESIGN OF AUTOMOTIVE SYSTEMS 3003

Course Objectives

- To explore various types of engineering materials
- To design various components in a I.C. engine
- To learn the design procedures for different type of gears
- To study the design process of a crankshaft
- To familiarize the students in design of flywheel

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply knowledge in engineering materials
- 2. Design I.C. engine components as per requirement
- 3. Design different types of gears for various applications.
- 4. Design crankshaft for applied loads.
- 5. Design of flywheel and its Components.

Articulation Matrix

UNIT I

ENGINEERING MATERIALS

Engineering materials - Introduction endurance limit,notch sensitivity.Tolerances,types of tolerances and fits,design considerations for interference fits , surface finish , surface roughness , Rankines formula - Tetmajers fourmla - Johnson formula.

UNIT II

DESIGN OF CYLINDER, PISTON AND CONNECTING ROD

Choice of material for cylinder and piston, design of cylinder, piston, and piston pin, pistonrings, piston failures, lubrication of piston assembly. Material for connecting rod, determining minimum length of connecting rod, small end design, shank design, design of big end cap bolts.

UNIT III

DESIGN OF GEARS

Spur Gears Nomenclature, Standard involute gears, Beam strength of tooth, Lewis equation, Form factor & velocity factor, Stress in gear teeth, Dynamic loads on gear teeth, Wear Strength. Helical Gears Nomenclature, Formative number of teeth, Helix angle, Face width, Velocity factor, Static Strength, Dynamic strength, and Wear strength.

UNIT IV

DESIGN OF CRANKSHAFT

Balancing of I.C. engines, MI of Crankshaft, significance of firing order. Material for crankshaft, design of crankshaft under bending and twisting, balancing weight calculations, development of short and long crank arms. Front and rear-end details.

UNIT V

DESIGN OF FLYWHEEL

Determination of the mass of a flywheel for a given co-efficient of speed fluctuation. MI of flywheel, Engine flywheel - stresses on the rim of the flywheels. Design of hubs and arms of the flywheel, turning moment diagram

22ME008 DESIGN OF TRANSMISSION SYSTEMS 3003

Course Objectives

- To study the design procedure of belt and rope drive
- To learn the design procedure of spur and helical gear drives
- To learn the design procedure of bevel and worm gear drives
- To study the design procedure of multistage gear box
- To familiarize the students for design of I.C. Engine Components

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Design of belt and rope drives.
- 2. Design of spur and helical gear drives.
- 3. Design of bevel and worm gear drives.
- 4. Draw the kinematic and ray diagrams for multi stage gear boxes.
- 5. Design of mechanisms and I.C. Engine Components.

UNIT I

9 Hours

DESIGN OF FLEXIBLE ELEMENTS

Need for power transmission - Types and classification of transmission systems, Applications, Limitations. Belt drives - Types, materials and construction, Selection of flat and V-belts from manufacturer catalogue. Wire Ropes- Construction, Rope lay, Stresses in wire rope, Failure of ropes.

DESIGN OF SPUR AND HELICAL GEARS Spur and Helical gears- Introduction, Gear design, Force analysis, Tooth stresses - Failure in gears.

UNIT III

UNIT II

DESIGN OF BEVEL AND WORM GEARS

Bevel Gear- Introduction, Types, Geometry, Angle relations, Basic dimensions, Force analysis. Worm Gear -Introduction, Types, Geometry, Basic dimensions - Forces on worm and worm wheel - Modes of failures.

UNIT IV

DESIGN OF GEAR BOXES

Gear Box - Geometric progression - Standard step ratio - Ray diagram - Kinematics layout. Design of multi stage gear boxes, Calculation of number of teeth and overlapping speed.

UNIT V

DESIGN OF MECHANISMS AND I.C. ENGINE COMPONENTS

Design of Ratchet & pawl mechanism and Geneva mechanism. Design of I.C engines components such as piston and connecting rod.

22ME009 DESIGN OF HEATING VENTILATION AND AIR CONDITIONING

Course Objectives

- To provide knowledge about types and working of heating, ventilation and air conditioning system components.
- To familiarize about the heat gain / loss in a building space to estimate heat load requirements
- To impart knowledge on components required for air distribution system
- To study the different types of chillers, cooling towers, pumps required for chilled water circulation
- To provide awareness on equipment selection and erection of HVAC system

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Utilize the principles of heating, ventilation and air conditioning.
- 2. Evaluate the heat load in a building envelope considering the factors responsible for heat gain and heat loss
- 3. Select the components required for an air distribution system
- 4. Evaluate the required components for a chilled water circulation
- 5. Design the HVAC System for erection with detailed instructions

C O No	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3

5	2	-	3	-	2	2	-	-	-	3	-	3	3	-	-

Articulation Matrix

UNIT I

INTRODUCTION TO HVAC

Air conditioning systems - Concept and Principle, Types - Window, Split Air conditioning, VRV, Central Air Conditioning System. Refrigeration - Refrigerant cycle, Refrigerant - Types, Evaporating & Condensing properties. Psychometric chart - Cooling, Heating, Humidification Methods, Dehumidification Methods, Properties of Air (DBT, %RH, WBT, , DPT, ENTHALPY)

UNIT II

HEAT LOAD ESTIMATION

Basics of Heat transfer in a building envelop. Understanding of Outdoor / Indoor Conditions, Temperature Requirements. Heat Load - Exposure of Wall, Latitude of Location, Yearly Range, Daily Range, Factors effecting the loads estimate. Heat Gain and Loss - Internal and External Sources and Calculations

UNIT III

DESIGN OF AIR DISTRIBUTION SYSTEM

Components of Air distribution system - Ducts, Diffusers, Vanes - Types, Selection, Requirements and Calculations. Duct designing methods and Fan Selection. Ventilation - Types, Components. Exhaust System - Kitchen and Parking ventilation in case of fire

UNIT IV

CHILLED WATER SYSTEM DESIGN

Introduction to Chilled and Hot water system - Chiller - Classification and Arrangements. Cooling Tower - Types and Arrangements. Pump and its classification - water velocity calculations. Piping - Fitting, Components, Valves and Friction Losses.

UNIT V

EQUIPMENT SELECTION AND ERECTION

Classification and Selection - AHU&FCU, Chiller, Condenser, Cooling Tower, Expansion Tank. Detailing and Installation - Chillers, Air handling units, Package units, Fan coil units and Condensing units. Drafting of HVAC Systems.

22ME010 ADVANCED CASTING AND FORMING PROCESSES 3003

Course Objectives

- To understand the concept design of gating in casting process.
- To impart knowledge on special casting processes like investment, centrifugal, die casting, and continuous casting.
- To understand the concept of theory of metal forming processes.
- To understand the working principle of bulk deformation processes.
- To expose the methods of sheet metal forming operations and powder metallurgy.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Design the sand moulding process gating system
- 2. choose the suitable casting process for the given component and explain the advanced casting process
- 3. Apply metallurgical principles to analyze slip, twinning, and plastic deformation in metal forming.
- 4. Select the suitable bulk deformation process based on application.
- 5. Apply the principles of conventional and HERF processes to select suitable presses and analyze sheet metal formability.

Articulation Matrix

UNIT I

CASTING DESIGN

Introduction - Principles and Design considerations in casting, Elements of a gating system, design of gating and risering, designing for directional solidification - casting defects, causes and its inspection hot coating, cold coating and warm coating.

UNIT II

ADVANCED CASTING PROCESSES

Investment casting, Shell mould casting, Continuous casting process-Reciprocating moulding process, direct chill process, materials, defects and its applications. Centrifugal casting- Types of centrifugal casting, calculation of rotation speed of the mould equipment. Die casting - types, dies for permanent mould castings, machines, design consideration for die casting and low pressure die casting.

UNIT III

THEORY OF METAL FORMING

Metallurgical aspects of metal forming - slip twining - mechanics of plastic deformation - effects of temperature - strain rate - microstructure and friction in metal forming - spring back effect - yield criteria and their significance - classification of metal forming processes.

UNIT IV

BULK DEFORMATION PROCESSES

Forging and Rolling - Introduction, classification, equipment types, die design and its types, press tools, processes, parameters and force calculation. Classification of extrusion processes tool, equipment and principle of these processes - influences of friction - Extrusion force calculation - Defects and analysis -Rod/wire drawing tool equipment and principle of processes - defects - Tube drawing and sinking processes - Mannesmann processes of seamless pipe manufacturing.

UNIT V

SHEET METAL FORMING AND POWDER METALLURGY PROCESSES

Classification - conventional and HERF processes - Presses - types and selection of presses formability diagram formability of sheet metals - Principle, process parameters equipment and application of the following processes - Deep drawing, spinning - stretch forming, plate bending, press brake forming Explosive forming - electro hydraulic forming - magnetic pulse forming - Powder Metallurgy Technique -Advantages - applications - Powder preform forging - powder rolling Tooling, process parameters and applications.

22ME011 NON-TRADITIONAL MACHINING PROCESSES

3003

Course Objectives

- To introduce basics of non-traditional machining processes.
- To study the mechanical energy based non-traditional machining processes.
- To provide knowledge on electrical energy based non-traditional machining process
- To impart knowledge on chemical and electro-chemical energy based processes.
- To impart knowledge on thermal energy based machining processes.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Evaluate advanced machining processes (AJM, WJM, USM, EDM, ECM, EBM, LBM, PAM) based on principles, advantages, limitations, and applications.
- 2. Select the suitable mechanical energy based non-traditional machining processes for the given industrial applications.
- 3. Find the suitable machining processes for machining electrically conductive materials.
- 4. Choose appropriate chemical and electro-chemical energy based processes for precision machining
- 5. Select the suitable thermal energy based process for cutting and machining of the hard materials.

Articulation Matrix

UNIT I

INTRODUCTION

Introduction - Need - Classification - Energies employed in the processes – Working principles, Advantages, Limitations, Applications of Abrasive jet machining(AJM), Water jet machining(WJM), Ultrasonic machining(USM), Electric discharge machining(EBM),Electro-chemical machining(ECM), Electron beam machining(EBM), Laser beam machining(LBM), Plasma arc machining(PAM).

UNIT II

MECHANICAL ENERGY BASED PROCESSES

Abrasive Jet Machining, Water Jet Machining and Ultrasonic Machining - Working Principles, Equipment, Process parameters, Material removal rate, Applications, High pressure abrasive water jet machining

UNIT III

ELECTRICAL ENERGY BASED PROCESSES

Electric Discharge Machining - Working Principles, Equipment, Process Parameters, Material removal rate, Electrode / Tool, Power Circuits, Tool Wear, Dielectric, Flushing, Wire cut EDM, EDM drill-Applications.

UNIT IV

CHEMICAL AND ELECTRO CHEMICAL ENERGY BASED PROCESSES

Chemical machining-Etchants, Maskants techniques. Electro-chemical machining - - Working principle, Equipment, Process Parameters, Material removal rate, Electrical circuit. Electro-chemical grinding - Electro-chemical honing - Applications.

UNIT V

THERMAL ENERGY BASED PROCESSES

Laser Beam machining, Plasma Arc Machining - Principles, Equipment. Electron Beam Machining - Principles, Equipment, Types, Beam control techniques, Material removal rate-Applications.

22ME012 WELDING TECHNOLOGY

Course Objectives

- To study the principles of welding process, gas welding, arc welding and their applications
- To provide knowledge on resistance welding process, parameters and its applications.
- To study the solid state welding process, parameters and its applications
- To know about special welding process and the welding automation for mass production.
- To learn the welding metallurgy, design and testing of weldments.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Determine the working principle of welding process and selecting parameters for the given applications.
- 2. Select the suitable Resistance welding techniques for industrial requirements.
- 3. Predict the suitable technique to suit the welding requirement of the components.
- 4. Analyze the need for the special techniques suitable automation for the special materials.
- 5. Examine welding symbol, welding metallurgy and Weldability of special metals to design and test to have sound weld

UNIT II

RESISTANCE WELDING PROCESSES

Spot welding (RSW), Seam welding (RSEW), Projection welding (PW), Resistance Butt welding, Flash Butt welding (FW), Percussion welding, High frequency resistance welding process and High frequency induction welding process - Advantages, limitations and its applications.

UNIT III

SOLID STATE WELDING PROCESSES

Forge welding (FOW), Friction welding (FRW), Explosive welding (EXW), Ultrasonic welding (USW), Cold welding (CW), Diffusion bonding (DFW), Roll welding (ROW) and Hot pressure welding (HPW) processes - Advantages, limitations and its applications.

UNIT IV

SPECIAL WELDING PROCESSES AND WELDING AUTOMATION

Thermit welding (TW), Atomic Hydrogen welding (AHW), Electron beam welding (EBW), Laser Beam welding (LBW), Friction stir welding (FSW), Under Water welding, Wire Arc Additive Manufacturing, Cladding, Welding automation in aerospace and automobile industry.

UNIT V

WELDABILITY, TESTING OF WELDMENTS, CODES AND STANDARDS

Weldability of Aluminium, Copper, Cast Iron and Stainless steels. Destructive tests: Tensile Test, Bend Test, Impact Test, Hardness Testing, Fatigue Test. Non-destructive testing: Visual Inspection, Liquid Penetrant Testing, Magnetic Particle Testing, Radiographic Testing and Ultrasonic Testing of weldments. Codes and Standards: Introduction to codes and standards, Welding and Welder Qualification, Procedure Qualification Record (PQR), Welding Procedure Specification (WPS), and Welder Performance Qualification (WPQ).

22ME013 PROCESS PLANNING AND COST ESTIMATION

Course Objectives

- To introduce the process planning concepts.
- To impart the importance of cost estimation process and procedures.
- To study the procedure to calculate direct, indirect and overhead expenses. To learn the procedure to estimate the various machine costs.
- To learn procedure to estimate the machining time for Lathe, drilling, boring, shaping, milling and grinding operations.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Use process planning and cost estimation to select materials and machines.
- 2. Assess the importance of cost estimation process and its procedures.
- 3. Compute direct, indirect and over head expenses
- 4. Determine the production cost of forging, welding, and foundry.
- 5. Find the machining time for Lathe, drilling, boring, shaping, milling and grinding operations

UNIT I

CO

PROCESS PLANNING

Definition - Objective - Scope - Process planning activities - Approaches - Manual, Computer Aided Process planning - Retrieval, Generative and Semi- generative - Selection processes - Machine selection -Material selection parameters - Set of documents for process planning. Production time calculation -Selection of cost optimal processes.

UNIT II

INTRODUCTION TO COST ESTIMATION

Objectives and functions of Estimating - Costing - Importance and aims of Costing - Difference between Costing and Estimation - Methods of Costing - Types of estimates - Methods of estimates - Importance of Realistic Estimates - Estimating procedure.

UNIT III

ELEMENTS OF COST

Introduction - Material Cost - Direct and Indirect - Labour cost - Direct, Indirect and Determination of Direct Labour Cost - Expenses - Direct and Indirect - Analysis of overhead expenses - Administrative expenses - Selling and Distributing expenses - Allocation of overhead expenses- Depreciation - Causes and methods of depreciation.

UNIT IV

PRODUCTION COST ESTIMATION

Estimation in forging shop - Losses in forging and forging cost - Problems - Estimation in Gas cutting and welding shop - Material cost, Labour cost and Finish on cost -Problems - Estimation in foundry shop - Pattern cost, Foundry cost and casting cost - Problems

UNIT V

ESTIMATION OF MACHINING TIME

Importance of machine time calculations - Estimation of machining time for Lathe, drilling, boring, shaping, milling and grinding operations - Problems

22ME014 COMPUTER INTEGRATED MANUFACTURING

3003

Course Objectives

- To introduce the basic concepts of Computer Integrated Manufacturing (CIM).
- To provide knowledge on Group Technology and Computer Aided Process Planning
- To impart knowledge on Shop Floor Control and Flexible Manufacturing Systems.
- To learn the various CIM implementation and data communication techniques.
- To provide knowledge on the concept of Manufacturing automation protocol, Technical office protocol and database terminology.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Assess CAD/CAM integration for changing manufacturing and management scene.
- 2. Construct a machine cell using the concepts of Group Technology and Computer Aided Process Planning
- 3. Select the suitable material handling and storage system for Flexible Manufacturing Systems.
- 4. Choose the suitable CIM implementation and data communication techniques.
- 5. Use various protocols and database terminology in CIM.

UNIT I INTRODUCTION

8 Hours

The changing manufacturing and management scene, External communication, Islands of automation and software, dedicated and open systems, ,manufacturing automation protocol, introduction to CAD/CAM integration

UNIT II

GROUP TECHNOLOGY AND COMPUTER AIDED PROCESS PLANNING

Classification and coding - DCLASS, MICLASS and OPITZ coding systems. Facility design using G.T. -Benefits of G.T - cellular manufacturing. Process planning, role of process planning in CAD/CAM integration- approaches to computer aided process planning- variant approach and generative approaches.

UNIT III

SHOP FLOOR CONTROL AND FMS

Shop floor control phases -factory data collection system -automatic identification methods- Bar code technology - automated data collection system. FMS- components of FMS- types -FMS workstationmaterial handling and storage systems- FMS layout-computer control systems-application and benefits

UNIT IV

CIM IMPLEMENTATION AND DATA COMMUNICATION

System modelling tools- ICAM definition (IDEF) models, activity cycle diagram, CIM open system architecture (CIMOSA) - manufacturing enterprise wheel- CIM architecture- Product data management, implementation-software. Communication fundamentals- local area networks (LAN) -topology -LAN implementations - network management and installations.

UNIT V

OPEN SYSTEM AND DATABASE FOR CIM

Open systems-open system inter-connection - manufacturing automation protocol and technical office protocol-(MAP/TOP). Development of databases - database terminology - architecture of database systems- data modeling and data associations -relational data bases - database operators - advantages of data base and relational database

22ME015 DIGITAL MANUFACTURING

3003

Course Objectives

- To develop the ability to generate 3D CAD models using different methods.
- To explain and apply the constructional features of CNC machines and develop programs for simple components.
- To provide comprehensive knowledge of generic processes and benefits of Additive Manufacturing (AM).
- To familiarize students with materials and process parameters in liquid- and solid-based AM techniques.
- To explore powder-based methodologies, emerging trends, and case studies in AM applications across industries.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Build a 3D model from 2D data using CAD tools.
- 2. Develop CNC programs for simple components.
- 3. Develop STL files and manipulate process parameters in AM machines.
- 4. Select appropriate liquid- or solid-based AM processes and materials for specific applications.
- 5. Choose appropriate AM processes to fabricate functional prototypes or components for aerospace, automotive, electronics, manufacturing, and medical applications.

UNIT I

CO

CAD MODELING

Introduction - Design process - Stages. CAD - Input and Output devices, Modeling methods - Wire frame modelling, Surface modelling, Solid modelling - Constructive Solid Geometry and Boundary Representation Techniques. CAD/CAM data exchange - IGES, STEP. Product Life cycle management (PLM).

UNIT II

AUTOMATION AND CNC MACHINES

Introduction to Automation - Definition, types, reasons for automation. CNC Machines - Principles, types, features, advantages, applications. CNC Machine structure - Linear motion bearings, Recirculating ball bearings, drive system, and control system. CNC Lathe and Milling programming - Linear and circular interpolation, threading and drilling programs.

UNIT III

ADDITIVE MANUFACTURING

Introduction - Impact of Additive Manufacturing (AM) and Tooling on Product Development -Distinction between AM and CNC Machining - The Generalized AM Process chain - CAD Model - Input file formats - Generation and Conversion of STL file - File Verification and Repair - Build File Creation -Part Construction - Part Cleaning and finishing - AM Benefits - Classification of AM process

UNIT IV

LIQUID AND SOLID MATERIAL BASED SYSTEMS

Stereo lithography Apparatus (SLA), Digital Light Processing (DLP), Fused Deposition Modelling (FDM) and Laminated Object Manufacturing (LOM) - Working Principle, Construction, Process, Materials and Applications Application of Additive Manufacturing in Manufacturing, Automotive industries and Aerospace industries

UNIT V

POWDER BASED PROCESSES

Selective Laser Sintering (SLS), Color Jet Printing (CJP), Electron Beam Melting (EBM) and Laser Engineered Net Shaping (LENS) - Working Principle, Construction, Process Variables, Materials and Applications. Reverse Engineering using 3D scanner.

22ME016 ADDITIVE MANUFACTURING

Course Objectives

- To provide knowledge on generic steps of Additive Manufacturing (AM) technique.
- To learn the concept and applications of liquid and solid based AM processes
- To impart knowledge on powder based AM processes.
- To introduce the concept of open source 3D printers and rapid tooling
- To expose the emerging trends and applications of Additive Manufacturing technology

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Assess the process parameters of additive manufacturing technologies.
- 2. Choose the applications of AM processes in various fields.
- 3. Select the suitable material and process for fabricating a given product.
- 4. Apply the knowledge in Material science in Additive. Manufacturing Components.
- 5. Design and develop a product for AM Process.

INTRODUCTION TO ADDITIVE MANUFACTURING

Introduction to AM, AM evolution, Distinction between AM & CNC machining, Steps in AM, Classification of AM processes, Advantages of AM and Types of materials for AM. Vat Photo polymerization AM Processes: Stereo lithography (SL), Materials, Process Modelling, SL resin curing process, SL scan patterns, Micro-stereo lithography, Mask Projection Processes, Two-Photon vat photo polymerization, Process Benefits and Drawbacks, Applications of Vat Photo polymerization, Material Jetting and Binder Jetting AM Processes. Solid Ground Curing (SGC) Principle processes parameters Process details - Machine details - Advantages and Limitations.

UNIT II

EXTRUSION-BASED AM PROCESSES

Fused Deposition Modelling (FDM), Principles, Materials, Process Modelling, Plotting and path control, Bio-Extrusion, Contour Crafting, Process Benefits and Drawbacks, Applications of Extrusion-Based Processes, case studies. Sheet Lamination AM Processes: Bonding Mechanisms, Materials, Laminated Object Manufacturing (LOM), Ultrasonic Consolidation (UC), Gluing, Thermal bonding, LOM and UC applications, case studies.

UNIT III

POWDER BED FUSION AM PROCESSES

Selective laser Sintering (SLS), Materials, Powder fusion mechanism and powder handling, Process Modelling, SLS Metal and ceramic part creation, Electron Beam melting (EBM), Process Benefits and Drawbacks, Applications of Powder Bed Fusion Processes, case studies.

UNIT IV

DIRECTED ENERGY DEPOSITION AM PROCESSES

Process Description, Material Delivery, Laser Engineered Net Shaping (LENS), Direct Metal Deposition (DMD), Electron Beam Based Metal Deposition, Processing-structure-properties, Relationships, Benefits, Drawbacks, Applications of Directed Energy Deposition Processes. Additive friction stir deposition process, Functionally graded additive manufacturing components. Case studies.

UNIT V

DESIGN FOR ADDITIVE MANUFACTURING (DFAM)

Design for Additive Manufacturing (DfAM): Introduction to geometric modelling, Modelling of Synthetic curves like Hermite, Bezier and B-spline, Parametric Representation of freeform surfaces, Design freedom with AM, Need for Design for Additive Manufacturing (DfAM), CAD tools vs. DfAM tools, Requirements of DfAM methods, General Guidelines for DfAM, The Economics of Additive Manufacturing, Design to Minimize Print Time, Design to Minimize Post-processing.

22ME017 NON DESTRUCTIVE TESTING

Course Objectives

- To learn different surface inspection techniques
- To provide knowledge on sub surface testing methods.
- To impart knowledge on ultrasonic testing method.
- To provide knowledge on radiography testing method.
- To study various special non-destructive testing methods.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Select and determine appropriate surface inspection techniques for the components to be inspected.
- 2. Examine non-destructive testing methods to identify subsurface defects in materials.
- 3. Select and determine the suitable testing method for testing internal defects.
- 4. Use radiography testing methods for different suitable applications.
- 5. Select the suitable special non-destructive technique for various applications.

5	1	3	3	2	-	-	1	-	-	-	-	-	-	2	-

SURFACE TECHNIQUES

Introduction and Scope of NDT, Discontinuities and Defects in various manufactured Components, Various physical characteristics of materials and their applications in NDT, Relative merits and limitations of NDT, Types of NDT techniques, Visual or Optical Testing - Direct and remote visual inspection and Aides. Liquid Penetrant Testing (LPT) Principles - Types and properties of liquid penetrants and developers - Preparation of test materials - Advantages and limitations - Application of penetrants to parts - Fluorescent penetrant test

UNIT II

SUB SURFACE TECHNIQUES TESTING

Magnetic Particle Testing (MPT) - Principles, applications, magnetization methods, magnetic particles -Dry particle technique and Wet fluorescent particle technique - Advantages and Limitations. Eddy Current Inspection - Principle, Methods, Equipment for ECT, Techniques, Sensitivity, Application, scope and limitations

UNIT III

ULTRASONIC TESTING

Ultrasonic Testing (UT) - Principle, Types and characteristics of Ultrasonic waves - Attenuation, Couplants, Probes - Inspection methods - Pulse echo, Transmission and Phased Array techniques (PAUT), Types of scanning and displays - Angle beam inspection of welds - Calibration of ASTM Test blocks, International Institute of Welding IIW) reference blocks - Applications

UNIT IV

RADIOGRAPHY TESTING

Radiographic testing (RT) -Principle, Sources of X-rays and Gamma rays and their characteristics -Absorption, scattering, Filters and screens, imaging modalities - Film radiography and Digital Radiography - Problems in shadow formation, Exposure factors, film handling and storage- Inverse square law, Exposure charts, and Radiographic equivalence, Penetrometers - Safety in radiography-Applications

UNIT V

SPECIAL NDT TECHNIQUES

Acoustic Emission Testing (AET) Principle - Instrumentation and applications, advantages and limitations. Infra-Red Thermography (IRT) - Principle, Techniques and applications. Leak Testing -Principle, Testing Procedure and applications. LASER Stereography-Typical applications- Requirements - advantages and disadvantages.

22ME018 / 22MEM18 OPERATIONS MANAGEMENT 3003

Course Objectives

- To understand the concept of production and operations management.
- To familiarize the various forecasting techniques.
- To make the decision on capacity and location planning.
- To impart the knowledge on aggregate planning and master scheduling.
- To emphasize the need of material management and inventory control.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Explain the concept and scope of operations management in a business context.
- 2. Select the appropriate forecasting techniques to forecast the demand.
- 3. Find the suitable workplace by facility location attributes.
- 4. Implement the aggregate planning and master scheduling for effective utilization of the resources.
- 5. Use the principles of material management and inventory control.

186

UNIT I

OPERATIONS MANAGEMENT

Introduction, Functions within business organizations, the operation management function, Classification of production systems, Productivity, factors affecting productivity. The decision process, characteristics of operations decisions, use of models, decision making environments, graphical linear programming, analysis and trade-offs.

UNIT II

FORECASTING

Steps in forecasting process, approaches to forecasting, forecasts based on judgment and opinion, analysis of time series data, accuracy and control of forecasts, choosing a forecasting technique, elements of a good forecast.

UNIT III

CAPACITY AND LOCATION PLANNING

Importance of capacity decisions, defining and measuring capacity, determinants of effective capacity, determining capacity requirement, developing capacity alternatives, evaluating alternatives, Need for location decisions, nature of locations decisions, general procedure for making locations decisions, evaluating locations decisions, facilities layout, need for layout decisions, types of processing.

UNIT IV

AGGREGATE PLANNING AND MASTER SCHEDULING

Aggregate planning, Nature and scope of aggregate planning, strategies of aggregate planning, techniques for aggregate planning, graphical and charting techniques, mathematical techniques. The master production schedule, Master scheduling process, Master scheduling methods.

UNIT V

MATERIALS MANAGEMENT AND INVENTORY CONTROL

Material Management, Components of Integrated Material Management, Materials planning, Inventory Control, Purchase Management, Stores Management; Inventory control, Models of Inventory controls, Purchase model, Manufacturing model.

22ME019 / 22MEM19 SUPPLY CHAIN MANAGEMENT 3003

Course Objectives

- To understand the individual processes of supply chain management and their inter relationships within individual companies and across the supply chain
- To understand the components of supply chain management
- To understand the tools and techniques useful in implementing supply chain management
- To understand the concept of retail logistics and contemporary issues.
- To understand the concept of ware house management.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Demonstrate knowledge on logistics and supply chain management tools and techniques
- 2. Plan and organize retail distribution logistic systems.
- 3. Carry out order management and reverse logistics.
- 4. Evaluate the role of logistics drivers and contemporary practices.
- 5. Organize the functions of warehouse management.

C O No	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3

INTRODUCTION

Concepts of Supply Chain and Logistics - Elements of Supply Chain - Elements of Logistics -Manufacturing Supply Chain - Functions of Manufacturing Supply Chain - Retail Supply Chain - Functions of Retail Supply Chain - Scope of Retail Logistics - Retail Supply Chain Management.

UNIT II

MANAGING RETAIL LOGISTICS

Retail Distribution - Retail Replenishment - Direct Store Delivery - Managing Retail Home Delivery - IT for Retail distribution and replenishment - Measures for Retail Distribution and replenishment - Retail Transport - Transport Management Using IT - Green Transport.

UNIT III

ORDER MANAGEMENT AND REVERSE LOGISTICS

Order Management - Process - Concept of perfect order - Perfect order measures - Multichannel logistics -Retail Return and reverse logistics - Return Policy - Return Process - Designing reverse supply chain Network - Reverse Logistics Challenges - Application for Reverse Management.

UNIT IV

RETAIL LOGISTICS AND CONTEMPORARY ISSUES

Managing retail shrinkage - Elements and causes of shrinkage - Shrinkage reduction - Green retailing -Green Logistics - Green Infrastructure - Green IT - Managing Logistics Service Provider - 3PLs/LSPs -Services outsourced to LSP/3PL - Major drivers of logistics outsourcing - Benefits of using 3PL/LSP -Evolution of 4 PL.

UNIT V

WAREHOUSE MANAGEMENT

Cross Docking - Cross Docking Functions - Necessary ingredients for Cross Docking - Advantages -Warehouse Process Maturity Model - IT in warehouse Management - Retail Warehousing - Basic Functions of retail Warehouse - Value added services of a Retail Warehouse.

22ME020 / 22MEM20 TOTAL QUALITY MANAGEMENT

3003

Course Objectives

- To learn concepts, dimension quality and philosophies of TQM
- To study the TQM principles and its strategies
- To learn the seven tools of statistical quality and management
- To impart knowledge on TQM tools for continuous improvement
- To introduce an international quality management system

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Use the concepts, dimension of quality and philosophies of TQM
- 2. Apply the principles of TQM and its strategies in industries
- 3. Apply the statistical quality tools and seven management tools
- 4. Choose the suitable TQM tools for continuous improvement
- 5. Use the concept of QMS, EMS and EnMS in industries

Articulation Matrix

UNIT I

INTRODUCTION

Definition of Quality - Analysis Techniques for Quality Costs - Basic concepts of Total Quality Management - Historical Review - Obstacles to TQM - Quality Statements - Strategic Planning - Deming Philosophy - Crosby philosophy - Continuous Process Improvement - Juran Trilogy - PDSA Cycle - 5S -Kaizen.

UNIT II

TQM PRINCIPLES

Principles of TQM - Leadership Concepts - Role of Senior Management - Quality Council - Customer satisfaction - Customer Perception - Customer Complaints - Customer Retention - Employee Involvement - Motivation - Empowerment - Teams - Recognition and Reward - Performance Appraisal - Benefits - Supplier Partnership - Partnering - Sourcing - Supplier Selection - Supplier Rating.

UNIT III

STATISTICAL PROCESS CONTROL (SPC)

The seven tools of quality - Statistical Fundamentals - Measures of Central Tendency and Dispersion -Population and Sample - Normal Curve - Control Charts for variables X bar and R chart and attributes P nP - C and u charts - Industrial Examples - Process capability - Concept of six sigma - New seven Management tools

UNIT IV

TQM TOOLS

Benchmarking - Quality Function Deployment (QFD) - House of Quality - QFD Process and Benefits - Taguchi Quality Loss Function - Total Productive Maintenance (TPM) - FMEA - Stages of FMEA - Case studies

UNIT V

QUALITY SYSTEMS

Need for ISO 9000 and Other Quality Systems - Elements - Implementation of Quality System - Documentation - Quality Auditing - ISO 9000:2015 - ISO 9001:2015 and ISO 9004:2018 - TS 16949 - ISO 14000 - ISO 50001 - Concept - Requirements and Benefits.

22ME021/22MEM21 LEAN MANUFACTURING

Course Objectives

- To impart knowledge on globally competitive manufacturing organization using lean manufacturing principles
- To provide knowledge on various plant layout and techniques for improving the productivity
- To acquire knowledge on quality improvement tools such as TQM, 5S and VSM
- To expertise the six sigma tools applications in various industrial field
- To familiarize the methods of six sigma technique

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Exemplify the basic lean manufacturing concepts, principles and its tools
- 2. Elucidate the concepts of plant layout and techniques for improving the productivity
- 3. Explain the various quality improvement tools such as TQM, 5S and VSM
- 4. Classify the basic concepts of six sigma and its tools
- 5. Apply the six sigma methodologies in various industrial fields

22ME022 / 22MEM22 ENGINEERING ECONOMICS 3003

Course Objectives

- Learn basics Engineering Economics, types of costs
- Impart different investment situations. economically sound decisions
- Study investment alternatives
- Learn market analysis to take optimal decisions
- Know the macro economics, taxes and inflation

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and

the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Understand the concept of engineering economics, types of costs and make economic analysis.
- 2. Apply various interest formulae and their applications for different investment situations.
- 3. Analyze various investment alternatives and make appropriate decisions.
- 4. Make replacement and market analysis to take optimal decisions.
- 5. Understand the macro economics and inflation.

22ME023 / 22MEM23 STATISTICAL PROCESS ANALYSIS AND OPTIMIZATION

3003

Course Objectives

- To provide quality data from product measurements and process readings
- To study the usage of statistical approaches to regulate a process/ production method.
- To calculate both simple and multiple regression models.
- To introduce the basic principles and methods of statistical design of experiments.
- To qualify a new manufacturing process as being fit for use in production.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Explain the statistical and analytical methods to track the results of a process.
- 2. Explain the acceptance sampling principles and methods.
- 3. Determine the effect of each of the explanatory variables on the response variable.
- 4. Demonstrate the extent of an improvement made to a process.
- 5. Determine the short term stability and capability of a process.

STATISTICAL PROCESS CONTROL

Definition of quality and its evolution - Causes of variation in quality - Statistics and parameters - Variables and attributes - Frequency distribution - Histogram - Construction and interpretation - Use of software -Statistical basis of control chart - Anatomy of control charts - Selection and implementation of control charts - Control charts for variables and attributes - Simple case studies on applications of various types of control charts - Use of software.

UNIT II

PROCESS CAPABILITY ANALYSIS

Process capability - Definition - Assumptions - Metrics - Methodology of process capability assessment -Case studies - Use of software.

UNIT III

REGRESSION

Definition and need - Simple linear probabilistic model - Assumptions - Method of least squares - ANOVA for linear regression - Coefficient of determination - Multiple regression - General linear model and assumptions - ANOVA for multiple regression - Interpretation of results - Polynomial regression -Limitations of regression - Simple applications - Use of software.

UNIT IV

EXPERIMENTAL DESIGN

Classical design of experiments - Single factor and multi-factor experiments - Analysis of experimental results - Taguchi design of experiments - Phases - Analysis and interpretation - Case studies - Use of software.

UNIT V

RESPONSE SURFACE METHODOLOGY

Response surfaces - Two-level factorial designs - Addition of centre points - Method of steepest ascent -Central composite and Box-Behnken designs - Analysis of first order response surface - Case studies - Use of software.

22ME024 OPERATIONS RESEARCH 3003

Course Objectives

- To impart knowledge on the basics of linear programming techniques.
- To understand the transportation and assignment models.
- To provide knowledge on network models and project management.
- To learn the concept of queuing model and problems associated in it.
- To familiarize the sequencing and replacement models.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Formulate and select the suitable method to solve the linear programming problem.
- 2. Solve the different transportation and assignment based models.
- 3. Draw the network models and solve it.
- 4. Select the suitable queuing model and solve the given applications.
- 5. Find the total elapsed time and optimum replacement policy.

LINEAR PROGRAMMING

Operations Research - Introduction, Scope, Objectives, Phases, and its limitations. Linear Programming Problem(LPP) Formulation, Graphical method, Simplex method. Artificial variable techniques - Big-M method and two-phase method.

UNIT II

TRANSPORTATION AND ASSIGNMENT MODEL

Transportation - Introduction, Initial basic feasible solutions - Northwest corner rule, Least cost method, and Vogel"s approximation method. Optimality test using MODI method. Assignment - Introduction and Hungarian method for optimal solution. Travelling salesman problem.

UNIT III

NETWORK MODELS AND PROJECT MANAGEMENT

Network models - Introduction, Rules for construction and errors. Shortest route - Dijkstra"s algorithm, Minimal spanning tree - Kruskal's algorithm, Maximum flow models. Project management - CPM and PERT networks.

UNIT IV

OUEUING MODELS

Queuing model - Introduction, Elements, Kendall's Notation, Parameters, Single Server and multi-server models, Poisson input, Exponential service, Constant rate service, Finite and Infinite population.

UNIT V

SEQUENCING AND REPLACEMENT MODEL

Sequencing Problem - Introduction, Types - n jobs with 2 machines and n jobs with 3 machines. Replacement Models - Introduction, Types, Replacement of items that deteriorate with time, Value of money changing with time and not changing with time. Optimum replacement policy - Individual and Group replacement policy.

22ME025 ENTERPRISE RESOURCE PLANNING

3003

Course Objectives

- To enable the students to build up an integrated real-time view of core business processes.
- To understand the status of business commitments.
- To develop business management software usually a suite of integrated applications.
- To create an integrated software system to manage the business and automate back office functions.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. To gain knowledge about the evolution and importance of ERP.
- 2. To understand the concepts and architecture of ERP system.
- 3. To understand the functional modules of ERP and its integration.
- 4. To develop an idea for the implementation plan of ERP industries.
- 5. To gain knowledge about the technologies related to ERP.

201

UNIT I

MRP AND INTRODUCTION TO ERP

Introduction - Overview of Material Requirement Planning (MRP I and MRP II) - Capacity requirements planning - History of ERP - Evolution of ERP - Comparison of ERP with traditional systems - Benefits of ERP - Need for ERP - Overview of modules in ERP- Product life cycle

UNIT II

ERP IMPLEMENTATION

Traditional approach to information system design - New approach to system development - ERP implementation - Requirement analysis - Alternatives - Life cycle - Implementation methodology -Selection of an ERP package for suitability for manufacturing - Hidden costs - Case studies.

UNIT III

BUSINESS MODULES IN ERP

Accounts - Production planning - Human resources - Plant maintenance - Materials management - Quality management - Sales and distribution - Ware house and supply chain - Case studies.

UNIT IV

ERP MARKET

Implementation of ERP - Implementation life cycle - Phases - Transition strategies - ERP package selection - Implementation process - Role of vendors - Consultants and user in ERP implementation - Challenges to successful ERP implementation - Critical Success and failure factor - Operation and maintenance - Oracle - Peoplesoft - Lawson Software - Trends in ERP

UNIT V

ERP CASE STUDIES

HRM - Finance and costing - Production planning - Materials management - Sales and distribution -Integration of modules.

22ME026 VALUE ANALYSIS AND VALUE ENGINEERING

3003

Course Objectives

- To study the value engineering process and able to identify its functions within the process.
- To determine the appropriate value engineering methodology for a given project and propose appropriate training to centralized and decentralized modes.
- To learn various decision-making processes and cost evaluation models and apply them in appropriately in the product development life-cycle.
- To explore in-depth understanding of various value engineering applications in human resources, manufacturing and marketing.
- To demonstrate to implement value engineering solutions and propose to perfect them.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Understand the principles and concepts of value analysis and value engineering.
- 2. Understand the principles and concepts of worth analysis and its relationship with team dynamics.
- 3. Apply brainstorming, Gordon technique, feasibility ranking, and make or buy decision techniques to identify potential solutions and make informed decisions in complex problem-solving situations.
- 4. Apply break-even analysis and life cycle cost techniques to optimize the value of a project or product, while considering the cost, customer needs, and other relevant factors.
- 5. Develop and prioritize recommendations for improvement based on the audit results and the VE Job Plan analysis.

VAPOR COMI

Need for modification of Carnot cycle - Ideal and actual vapour compression cycle - Improvements in simple vapour compression system using flash chamber and flash inter cooler - Compound vapor compression system - Need for compound compression - Two stage compression and various arrangements for improvement in coefficient of performance

UNIT III

OTHER REFRIGERATION SYSTEMS

Principle - Components - Working - Limitations and applications of Steam jet refrigeration system -Thermo-electric refrigeration system - Electrolux refrigeration system - Vortex refrigeration system and Cascade refrigeration system.

UNIT IV

APPLIED PSYCHROMETRY

Principle and properties of psychometric of air - Representation of various psychometric processes on psychometric chart and their analysis - By-pass factor - Sensible heat factor - Room sensible heat factor -Equipment sensible heat factor - Grand sensible heat factor - Apparatus dew point - Ventilation and infiltration - Energy efficiency ratio - Use of psychometric charts - Cooling and heating load calculations.

UNIT V

AIR CONDITIONING SYSTEMS

Comfort Air Conditioning - Parameters - Requirements - Concept of effective temperature - Infiltration -Internal heat gain - Comfort charts - Industrial Air conditioning - Air conditioning systems and their types - Selection of system - Components and controls of air distribution - Window air conditioner - Split air conditioner - Central air conditioner - Load estimation.

22ME027 POWER PLANT ENGINEERING 3003

Course Objectives

- To impart the knowledge on boilers and steam power plant.
- To learn about the various components associated with steam power plant.
- To study the working of nuclear and hydel power plant.
- To learn about the working of diesel and gas turbine power plant.
- To provide the knowledge on power plants using renewable energy and economics of power plants.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply the working principles of steam power plants and boilers towards their operational processes.
- 2. Analyze the functions of various systems within a steam power plant.
- 3. Select suitable components for nuclear and hydel power plants based on their operational requirements.
- 4. Evaluate the working mechanisms of diesel and gas turbine power plants.
- 5. Evaluate the economics of power plant operations towards the different sources of renewable energy.

INTRODUCTION TO POWER PLANTS AND BOILERS

Layout of Steam power plant - Components, Selection. Steam Boilers and Cycles - High Pressure and Super Critical Boilers, Fluidized Bed Boilers. Combined Power Cycles. Comparison and Selection.

UNIT II

STEAM POWER PLANT

Fuel and Ash Handling - Combustion Equipment for burning coal, Mechanical Stokers, Pulveriser, Electrostatic Precipitator, and Mechanical Collectors. Draught - different types. Surface Condenser types. Cooling Towers. Pollution controls.

UNIT III

NUCLEAR AND HYDEL POWER PLANTS

Nuclear Energy - Fission, Fusion Reaction. Layout - Types of Reactors, Pressurized Water Reactor, Boiling Water Reactor, Waste Disposal and safety. Hydel Power Plant - Layout, Essential Elements, pumped storage. Selection of Turbines, Governing of Turbines.

UNIT IV

DIESEL AND GAS TURBINE POWER PLANTS

Layout of Diesel power plant - Components, Selection of Engine Type, applications. Gas Turbine Power Plant - Layout, Fuels, Gas Turbine Material. Open and Closed Cycles - Reheating, Regeneration and Intercooling.

UNIT V

OTHER POWER PLANTS AND ECONOMICS OF POWER PLANTS

Geo thermal power plant. Ocean thermal energy conversion (OTEC). Tidal power plant. Solar thermal power plant. Wind energy. Wind turbines. Magneto hydrodynamic generator (MHD). Cost of Electric Energy - Fixed and operating Costs, Economics of load sharing.

22ME028 REFRIGERATION AND AIR CONDITIONING

Course Objectives

- To recall the basic principles, cycles and system in the Refrigeration system.
- To know the components of vapour compression various refrigeration systems and refrigerants
- To learn the operation of various refrigeration systems.
- To identify the parameters involved in design of air conditioning systems.
- To learn the procedure of installation, servicing and applications of Refrigeration and airconditioning system.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Illustrate the principle of refrigeration systems.
- 2. Select the components and working of vapor compression refrigeration systems
- 3. Demonstrate the working of various refrigeration systems
- 4. Determine the parameters involved in design of air conditioning systems.
- 5. Explain the installation, charging, servicing and applications of refrigerant and air-conditioning system

BASIC PRINCIPLE, CYCLES AND SYSTEMS

First and Second law of thermodynamics applied to refrigerating machines - Reversed Carnot cycle, unit of refrigeration, co-efficient of performance. Air refrigeration: Bell-Coleman cycle, Types of air refrigeration systems. Need for modification of Carnot cycle, Ideal and actual vapour compression cycle, Improvements in simple vapour compression system.

UNIT II

COMPONENTS OF REFRIGERATION SYSTEM

Types, and Working-Compressors, Evaporator, Condenser, Expansion Valve. Air conditioning systems and their types, selection of system, Components and controls of air distribution. Refrigerants - Types, Desirable properties and Nomenclature of refrigerants, Impact of refrigerants, recent substitutes for refrigerants.

UNIT III

REFRIGERATION SYSTEM

General Layout, Working Principle- Vapour Compression Refrigeration system - Vapour absorption refrigeration system (Li-Br, Aqua Ammonia and solar) - Thermo-electric refrigeration system, Electrolux refrigeration system, Vortex refrigeration system, Steam jet refrigeration system and Cascade refrigeration system.

UNIT IV

PSYCHROMETRIC AND AIR CONDITIONING SYSTEMS

Principle and properties of psychometric of air, Representation of various psychometric processes on psychometric chart and their analysis. Comfort Air Conditioning-parameters, requirements, concept of effective temperature, infiltration, internal heat gains, comfort charts. Window air conditioner, split air conditioner, Central air conditioner, Cooling and heating load calculations.

UNIT V

INSTALLATION, SERVICING AND APPLICATIONS

Window AC and Split AC-installation Procedure, Charging methods, Leakage detection methods-Servicing and Safety Procedure. Importance, General layout, Working and limitations- Industrial Air conditioner-Food storage and preservation system-Ice manufacturing plant-Solar Air conditioner-Automobile air conditioner.

22ME029 ENERGY CONSERVATION AND MANAGEMENT

3003

Course Objectives

- To understand different forms of energy and its conservation techniques.
- To identify the different types of energy audit and standards.
- To learn the energy efficiency enhancement methods in thermal utility systems.
- To know the energy efficiency enhancement methods in electrical utilities
- To assess the energy performance of different industry.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Distinguish various forms of energy and its conservation techniques.
- 2. Categorize the different types of energy audits followed in industry.
- 3. Assess the efficiency enhancement techniques of thermal utilities.
- 4. Analyse the efficiency of electrical utilities.
- 5. Evaluate the performance of industry based on energy.

Articulation Matrix

UNIT I

VARIOUS FORMS AND CONSERVATION OF ENERGY

Energy sources, classification: Electricity basics- DC, AC current, electricity tariff, Thermal Basicsthermal energy contents of fuel, Mechanical, electrical and thermal energy conversion techniques: energy conversion efficiencies.

UNIT II

ENERGY MANAGEMENT

Scope, types of energy audit, energy audit methodology, role of energy managers; Energy management system (EnMS): ISO standards, implementing energy efficiency measures, detailed, project report, energy monitoring and targeting, economic and cost benefit analysis, energy service companies (ESCOS).

UNIT III

ENERGY EFFICIENCY IN THERMAL UTILITIES

Steam engineering in thermal and cogeneration plants; efficient utilization of steam: Piping, traps, flashing, condensate recovery, pinch analysis; Boiler: Losses and efficiency calculation methods, controls; Furnaces: Heat balance and efficiency calculations, energy conservation opportunities, insulation and refractories

UNIT IV

ENERGY EFFICIENCY IN ELECTRICAL UTILITIES

Electrical system efficiency improvements: Motor, diesel generator, centrifugal pumps, fans, blowers, lighting systems; Air compressor: Line loss, leakage test, optimum pressure.

UNIT V

PERFORMANCE ASSESSMENT

Industrial case studies: Assessment of energy generation/consumption in thermal station, steel industry, cement industry, textile industry.

22ME030 GAS DYNAMICS AND JET PROPULSION 3003

Course Objectives

- To provide the knowledge on compressible flow.
- To analyse the isentropic flow through variable area ducts, Fanno flow and Rayleigh flow.
- To analyse the effect of flow properties on normal shock.
- To apply the basic gas dynamics theories for aircraft Propulsion systems.
- To learn the working of solid propellant and liquid propellant rocket engines.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Show the fundamental principles of compressible flow.
- 2. Solve problems related to isentropic flow through variable area ducts, Fanno flow, and Rayleigh flow.
- 3. Determine the effects of flow properties on normal shock.
- 4. Establish the basic gas dynamics theories for aircraft propulsion systems.
- 5. Demonstrate the working principles of solid propellant and liquid propellant rocket engines.

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

5	2	3	-	-	-	2	-	-	-	-	-	2	-	-	3

COMPRESSIBLE FLOW FUNDAMENTALS

Introduction to compressible flow - Integral and differential forms of conservation equations, velocity of sound, Mach number, various regimes of flow, wave propagation, Mach cone and Mach angle- Stagnation state - stagnation enthalpy, stagnation temperature, stagnation pressure and stagnation density - critical state - reference velocities, reference Mach number. Effect of Mach number on compressibility.

UNIT II

FLOW THROUGH VARIABLE AREA DUCTS

Isentropic flow through variable area ducts - effect of area change on flow parameters, area ratio as a function of Mach number, impulse function, mass flow rate equations, chocking flow.

UNIT III

FLOW THROUGH CONSTANT AREA DUCTS

Flow in constant area ducts with friction (Fanno flow) Governing equations, fanno curves and Fanno flow equations, variation of flow properties, variation of Mach number with duct length. Flow in constant area ducts with simple stagnation temperature change (Rayleigh Flow) - Governing equations, Rayleigh line and Rayleigh flow equation, maximum heat transfer in Rayleigh flow.

UNIT IV

FLOW WITH NORMAL SHOCK

Governing equations - variation of flow properties like static pressure, static temperature, density, stagnation pressure and entropy across the normal shock - Prandtl equation - Rankine Hugonoit equation. Impossibility of shock in subsonic flows, flow in convergent and divergent nozzle with normal shock.

UNIT V

AIRCRAFT AND ROCKET PROPULSION

Aircraft propulsion - types of jet engines, energy flow through jet engines. Performance of turbo jet engines - thrust, thrust power, propulsive and overall efficiencies - thrust augmentation in turbo jet engine. Ram jet, Scram jet and Pulse jet engines. Rocket Propulsion - Classification of rocket engines. Propellants - solid, liquid and hybrid propellants, rocket engines thrust equation, effective jet velocity, specific impulse. Rocket engine performance.

22ME031 RENEWABLE ENERGY TECHNOLOGIES

3003

Course Objectives

- To learn about solar radiation and solar thermal system application.
- To provide knowledge on fundamentals and sizing of solar photovoltaics.
- To study about the potential and energy conversion process of Wind Energy and Bio Energy.
- To impart fundamental knowledge about Ocean Thermal Energy and Geothermal Energy.
- To provide knowledge about the recent trends in Hydrogen and Fuel Cells.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Predict solar radiation and determine its conversion into heat using solar collectors.
- 2. Examine the working principles of a solar photovoltaic system for isolated applications.
- 3. Show the energy conversion processes in wind energy and bioenergy systems.
- 4. Apply fundamental concepts to ocean thermal and geothermal energy systems.
- 5. Demonstrate the application of hydrogen and fuel cells to develop sustainable energy solutions.

5	2	-	2	2	-	-	3	-	-	-	-	2	2	-	2

UNIT I

SOLAR THERMAL SYSTEMS

Solar radiation, Radiation measurement, Introduction to solar collectors, Flat Plate collectors, evacuated tube collectors and concentrating collectors and Air heaters, Solar desalination systems, Solar drying systems, Solar thermal systems for power generation.

UNIT II

SOLAR PHOTOVOLTAIC SYSTEMS

Solar Photovoltaic systems: Basic Principle, Photovoltaic cell concepts, Cell, module, array, Voltage current characteristics of a solar cell, Series and parallel connections, Maximum power point tracking, Applications.

UNIT III

WIND ENERGY AND BIO ENERGY

Basic principles of wind energy conversion - classification of wind turbines, wind power generation curves, wind data and energy estimation. Site selection considerations. Bio mass resources, Energy from Bio mass, Biofuels classification, Biomass gasification- Technologies for utilisation of biomass, Biogas -Production, factors affecting biogas production, biogas plants, Bio mass Cogeneration.

UNIT IV

OCEAN THERMAL ENERGY AND GEOTHERMAL ENERGY

Wave energy - Energy from waves, energy potential, conversion devices. Tidal energy - energy potential, conversion systems. Ocean thermal energy conversion systems. Geothermal energy - geothermal resources, geothermal conversion systems.

UNIT V

HYDROGEN AND FUEL CELLS

Basic properties of hydrogen. Technologies of hydrogen production. Transformation of hydrogen energy hydrogen economy. Fuel cells - operating principle, classifications, Specific characteristics, and applications.

22ME032 COMPUTATIONAL FLUID DYNAMICS

Course Objectives

- To provide the knowledge on fundamental governing equations of fluid mechanics and heat transfer
- To acquire knowledge on formulation of governing Equations for fluid flow problems in finite difference method
- To study the steady and unsteady state diffusion type problems using finite volume method
- To impart one dimensional and two dimensional elements in finite element techniques for fluid flow problems
- To learn the structured and unstructured grids generation techniques and turbulence model

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Model the fundamental governing equations of fluid mechanics and heat transfer.
- 2. Solve the fluid dynamics problems using finite difference method.
- 3. Relate finite volume equations for steady and unsteady state diffusion type problems.
- 4. Apply the finite element methods for fluid flow problems.
- 5. Assess the grids using grid generation techniques for simple, complex geometries and towards the creation of turbulence.

UNIT II

FINITE DIFFERENCE METHOD

Basics and discretization of simple and complex governing equations. Applications. Incompressible inviscid Flows- Illustrative and physical examples of Elliptic, Parabolic and Hyperbolic equations -Discretization of partial Differential Equations. Implicit, explicit and Crank Nicolson finite difference methods for viscous flows. Stability, convergence, accuracy.

UNIT III

FINITE VOLUME METHOD

Basic rules for FV Discretization. Finite Volume (FV) Discretization of one and two dimensional steady state diffusion type problems - 1-D convection-diffusion type problem - Unsteady flows - implementation of boundary conditions in Finite Volume. Solution of discretized equations. Solution algorithm for Pressure Velocity coupling in steady flows - Pressure-velocity coupling - SIMPLE scheme.

UNIT IV

FINITE ELEMENT METHOD IN FLUIDS

Over view of Finite Element Techniques in Computational Fluid Dynamics. Weighted residual and Variational formulations. Finite element interpolation. One and two dimensional elements. Steady state conduction and incompressible potential flow problems.

UNIT V

NUMERICAL GRID GENERATION AND TURBULENCE MODEL

Introduction. Algebraic grid generation. Differential Grid Generation. Structured and unstructured grids. Body fitted Coordinate Method. Reynolds averaged Navier-Stokes equations, RANS modeling, DNS and LES.

22ME033 IC ENGINES AND EMISSIONS

3003

9 Hours

Course Objectives

- To learn about the combustion phenomenon in spark ignition engines.
- To learn about the combustion phenomenon in compression ignition engines and cooling systems.
- To study the causes, effects and control of pollutants from an Internal Combustion engine.
- To provide the knowledge of alternate fuels in Internal Combustion engines.
- To impart the knowledge on recent developments in Internal Combustion engines.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Assess the combustion phenomenon in spark ignition engines.
- 2. Illustrate the combustion phenomenon in compression ignition engines and lubrication, cooling systems.
- 3. Assess the uses of alternate fuels in Internal Combustion engines.
- 4. Exemplify the causes, effects and control of pollutants from an IC engine.
- 5. Illustrate the recent developments in Internal Combustion engines.

Articulation Matrix

UNIT I

SPARK IGNITION ENGINES

Spark ignition engine- Mixture requirements, carburetors, fuel injection systems, mono point and multipoint injection, Combustion chambers: Simple thermodynamic analysis of SI engine combustion, Stages of combustion, normal and abnormal combustion, factors affecting knocking-combustion chambers.

UNIT II

COMPRESSION IGNITION ENGINES.

States of combustion in Compression Ignition Engine - combustion knock in compression ignition engines, methods of controlling knock. Direct and indirect injection systems. Combustion chambers. Fuel sprays behavior-spray structure, spray penetration and evaporation. Lubricating and cooling systems; Air motion- Super and turbocharging. Performance of IC engines.

UNIT III

ALTERNATIVE FUELS

Alternative fuels- CNG, alcohols, biodiesel, hydrogen, GTL, natural gas and liquefied petroleum gas, bio gas, properties, suitability, and demerits of fuels, Engine modifications for alternate fuels (liquid and gaseous fuels), homogenous charge compression ignition engines.

UNIT IV

POLLUTANT FORMATION AND EMISSION CONTROL.

Pollutant -formation of Oxides of Nitrogen in spark ignition and compression ignition engines, hydrocarbon emission - carbon monoxide formation - particulate emissions. Measurement of exhaust emissions- Non dispersive infrared gas analyser, gas chromatography, chemiluminescent analyser and flame ionization detector, smoke meters. Methods of controlling emissions- Catalytic converters and particulate traps. Exhaust gas recirculation and Selective catalytic Reduction. Additives for pollution control. Engine modifications to reduce emissions.

UNIT V

RECENT TRENDS IN I.C ENGINES

Hybrid engines, Lean Burn Engines - stratified charge engines, homogeneous charge compression ignition, plasma Ignition. Variable valve timing, multi-valving, tuned manifolding, cam less valve gearing, Variable compression ratio engines.

22ME034 FUEL CELL VEHICLES

Course Objectives

- To outline the basics of fuel cells and the electrochemical reactions.
- To relate the principles, performance and applications of different fuel cells.
- To outline the fundamental concepts involved in fuel cell vehicles.
- To impart knowledge on the technologies associated with fuel cell powered vehicles
- To highlight the recent advancements in different fuel cell powered vehicles.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Demonstrate the operating principles of fuel cell components.
- 2. Select suitable fuel cell for different automobile applications
- 3. Demonstrate the working of components of fuel cell vehicles.
- 4. Select appropriate fuel cell technology for EVs and HEVs.
- 5. Analyze the principle, construction, and limitations of fuel cell powered vehicle.

22ME035 INSTRUMENTATION FOR THERMAL SYSTEMS

3003

Course Objectives

- To classify various measuring instruments.
- To provide knowledge on temperature sensors and their applications in measurement.
- To impart knowledge on advancements in pressure and volume measurements.
- To learn about the various measurement techniques for thermos physical properties.
- To expose the knowledge on different data acquisition systems.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Determine the role of uncertainty analysis in measuring instruments.
- 2. Apply the appropriate temperature sensors based on specific applications.
- 3. Select the suitable sensors for pressure and volume measurement.
- 4. Compute the thermos-physical properties of specific samples.
- 5. Examine the advantages of data acquisition systems.

22ME036 / 22MEH36 TOOL AND DIE DESIGN

Course Objectives

- To provide knowledge on design principles for designing the jigs and fixtures.
- To impart knowledge on locating and clamping principles for designing jigs and fixtures.
- To introduce the different types of jigs for producing the part.
- To study different types of fixtures for the producing the part.
- To introduce about press working terminologies and press accessories.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Analyze the design aspects of jigs and fixtures.
- 2. Find suitable locators and clamps for jigs, fixtures, and press tools.
- 3. Design a suitable jig for producing a part of the given component.
- 4. Design a suitable fixture for producing the given component.
- 5. Design a suitable press tool dies and Press tools for the given simple components.

UNIT I

9 Hours

3003

INTRODUCTION TO TOOL DESIGN

Objectives, Challenges and Requirements, Production and Inspection Devices. Jigs and Fixtures - Differences, Design principles, Advantages, Essential Features, Materials used. Introduction to Limits, Fits and Tolerances, International Tolerance Grades, Geometric Dimensioning and Telebanking in tools.

Location - Principles, Basic rules, Degrees of Freedom, 3-2-1 Principle, Locating Methods, Types of Locators, Standard Parts. Clamping - Principles, Types of Mechanical Actuation Clamps, Pneumatic, Hydraulic, Magnetic, Vacuum, Electrostatic clamping, Epoxy Resin Clamping. Factors considered for Design of Jigs and Fixtures.

UNIT III

UNIT II

DESIGN OF JIGS

LOCATION AND CLAMPING

Jigs - Elements, Construction, Types and Materials for Jig Elements. Drill bushes - Types, Special Bushes, Bush Clearance. Automatic drill jig, Rack and pinion operated, Indexing, Air operated Jig components - Design of Jigs for given components.

UNIT IV

DESIGN OF FIXTURES

General Design Principles of Fixture. Types of Boring, Lathe, Milling and Broaching fixtures - Setting Block. Grinding, Planing and Shaping fixtures. Inspection - Gauging, Measuring and Supplement fixtures. Welding, Assembly and Modular fixtures. Design of fixtures for given component.

UNIT V

DESIGN OF PRESS TOOLS

Mechanical Presses - Working terminology, Elements, Types and Press Accessories. Types of Dies, Punches and Strippers. Pressure pad, Knockouts, Stops and Pilots. Bending, Forming, Drawing and Deep Drawing - Dies and its Types. Spring-back phenomenon and Draw Ratio. Progressive, Combination and Compound Dies. Design and Development of Dies - Blank Development, Strip Layout, Computation of capacities and tonnage requirements.

22ME037 / 22MEH37 GEOMETRIC MODELLING

3003

Course Objectives

- To provide the knowledge on coordinate systems.
- To study the mathematical modelling of analytical and synthetic curves.
- To learn the parametric and non- parametric forms of analytical and synthetic surfaces.
- To impart the knowledge about solid modelling techniques.
- To learn the transformation and projection techniques.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Apply the coordinate system to develop geometric models.
- 2. Develop and manipulate the curves and surfaces using parametric equations.
- 3. Demonstrate and manipulate the solid models using different modeling approaches.
- 4. Implement the transformation and projection over the geometric model.
- 5. Determine the neutral file formats over 2D wireframe models.

Articulation Matrix

UNIT I

COORDINATE SYSTEMS

Geometric co-ordinate systems - Cartesian, Cylindrical and Spherical coordinate systems. Display coordinate systems - Global, Local, View and Screen coordinate systems.

UNIT II

MATHEMATICAL MODELLING OF CURVES

Definition - Parametric and non-parametric forms of analytical and synthetic curves. Analytical Curve modelling - Line Segment, Circle, Ellipse. Synthetic Curve modelling - Hermite Cubic Spline, Bezier, B-spline and Rational Curves. Curve manipulation techniques.

UNIT III

MATHEMATICAL MODELLING OF SURFACES

Definition - Parametric and non- parametric forms of analytical and synthetic surfaces. Analytical surface modelling - Parametric form of plane, loft, Cylindrical, Surface of revolution. Synthetic Surface modelling - Hermite Bicubic Spline, Bezier, B-spline, Coon"s, triangular, blending Surfaces. Surface Manipulation techniques.

UNIT IV

MATHEMATICAL MODELLING OF SOLIDS

Properties of solid model, solid modelling Techniques - Boundary representation, Constructive Solid Geometry, Analytical Solid Modelling, Sweep representation schemes. Solid Manipulation Techniques.

UNIT V

TRANSFORMATION AND PROJECTION TECHNIQUES

Introduction to computer graphics, Non-interactive Vs interactive computer graphics, applications, graphics system configuration. 2D and 3D transformation techniques - Translation, Rotation, Scaling and Reflection principles. Principle of concatenated transformation. Orthographic and Perspective Projections of Geometric Models.

22ME038 / 22MEH38 ERGONOMICS

Course Objectives

- To learn the importance of ergonomics approach in product design and development.
- To study the human information input and workstations to fit employees
- To develop appropriate control measures for ergonomics risk factors
- To explore the workplace according to good ergonomics principles
- To assess ergonomics aspects of the working environment and work organisation

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply the ergonomics principles for the creation of safer, healthier and efficient activities in the workplace.
- 2. Develop the human ergonomics information input and workstations to fit employees.
- 3. Evaluate appropriate risk reduction measures to mitigate ergonomic risks.
- 4. Analyze the ergonomics principle for the design of workplace layout and design of equipment.
- 5. Examine the environmental aspects of good ergonomic design.

UNIT I

CO

INTRODUCTION TO HUMAN FACTORS ENGINEERING

Definition - human technological system - multidisciplinary engineering approach - human - machine system - manual - mechanical - automated system - human system reliability conceptual design - advanced development - detailed design and development

UNIT II

INFORMATION INPUT

Input and processing - text - graphics - symbols - codes - visual display of dynamic information - auditory - tactual - olfactory displays - speech communications.

UNIT III

HUMAN OUTPUT AND CONTROL

Physical work - manual material handling - motor skill - human control of systems - controls and data entry devices - hand tools and devices.

UNIT IV

WORKPLACE DESIGN

Applied anthropometry - workspace design and seating - arrangement of components within a physical space - interpersonal aspects of work place design - design of repetitive task - design of manual handling task - work capacity - stress - and fatigue.

UNIT V

ENVIRONMENTAL CONDITIONS AND HUMAN FACTORS APPLICATIONS

Illumination - climate - noise - motion - sound - vibration - colour and aesthetic concepts. Human error - accidents - human factors and the automobile - organizational and social aspects - steps according to ISO/DIS6385 - OSHA'''s approach - virtual environments.

22ME039 / 22MEH39 PRODUCT DATA AND LIFE CYCLE MANAGEMENT

3003

Course Objectives

- To understand the exposure on the internet based technology for the implementation of product life cycle concepts in product development.
- To familiarize the concepts, functions and administration features of Product Data Management.
- To educate the features of product life cycle management involved to resolve the problems while automating product dependent business processes
- To provide exposure on implementation of visualization and virtual reality approach and its techniques in product development
- To explore the diverse ways of integrating PLM with other CAD & ERP software for product development

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply the concept of Product Life Cycle Management in development of products with the help of Internet.
- 2. Develop the data management of specific project / process in an industry.
- 3. Utilize the product life cycle management in product depended business automation
- 4. Create the virtual reality model of product development using unique technique
- 5. Examine the results of integrating PLM with CAD & ERP in product development

PRODUCT DEVELOPMENT AND PRODUCT LIFECYCLE

Product development process and functions, present market constraints, need for collaboration, collaborative product development, use of internet class technologies and data transfer, various developments on internet technology that support product development and its impact on business. Concept of product lifecycle different phases of product lifecycle and corresponding technologies, its uses and examples

UNIT II

PRODUCT DATA MANAGEMENT (PDM)

PDM functions, PDM system and importance, architecture of PDM systems, document management, representation of lifecycle of business objects, concepts on roles, users and project management, system administration, access control and its use in lifecycle.

UNIT III

AUTOMATING BUSINESS PROCESSES

Product Lifecycle Management (PLM) architecture, components of PLM, lifecycle problems to resolve, Workflows, lifecycle and work flow integration, product configuration, bill of materials management, product structure, configuration management and engineering change management. Introduction to Product Manufacturing Information (PMI) and Model Based Definition (MBD

UNIT IV

PRODUCT VISUALISATION

Use of CAD neutral approach and visualization techniques in product development, capabilities of PLM visualization software ,light weight representations, markup method, representation information repository, use of visualization in different stages of lifecycle, case studies. Introduction to virtual reality, digital mock-up, virtual testing and validation

UNIT V

INTEGRATION OF PLM WITH OTHER SYSTEMS

Benefits of integrating PLM system with other systems, different ways to integrate PLM systems with other systems, integration with CAD and ERP - use of middleware in integrating business applications in product development. PLM software customisation.

22ME040 / 22MEH40 PRODUCT DEVELOPMENT AND REVERSE ENGINEERING

3003

Course Objectives

- To develop a new product by practicing a typical NPD Process followed in Industry
- To learn value engineering and product design tools to design a product
- To perform the Engineering Change Management process for a product
- To familiarize with the concept and design guidelines for manufacturing parts by different machining processes
- To educate the emerging trends and applications of reverse engineering and Additive manufacturing technology

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Analyse the new product based on the various roles in a typical NPD Process followed in Industry
- 2. Evaluate the value of a product and to select the appropriate product design tool for the specific product
- 3. Apply and demonstrate the Engineering Change Management process for a product
- 4. Design metallic and non metallic products under DFMA concepts to reduce machining time and manufacturing cost also considering the environmental impact
- 5. Create prototype by performing the reverse engineering techniques

UNIT I

INTRODUCTION TO NEW PRODUCT DEVELOPMENT

Product life cycle, Product policy of an organization. Selection of a profitable product, Product design process, New product strategy Idea generation and screening Concept development and testing Business analysis Product development testing and analysis Commercialization Collaboration Gantt chart product life cycle management.

UNIT II

VALUE ENGINEERING AND PRODUCT DESIGN TOOLS

Value engineering in product design, Advantages, Applications in product design. Introduction to product design tools, QFD, Computer Aided Design, Robust design, DFX, DFM, DFA, Ergonomics in product design.

UNIT III

ENGINEERING CHANGE MANAGEMENT

Product Data Management, Engineering Change Management process Impact of ECM, Typical steps followed ,Different roles in an ECM Process, Participating in an ECM process ,Engineering Change Request, Engineering Change Notice, Engineering Change Orders.

UNIT IV

DFMA GUIDELINES

Product design for manual assembly, Design guidelines for metallic and non metallic products to be manufactured by different processes such as casting, machining, injection molding etc. Design for Environment (DFE) methods ,Design guide lines , Lifecycle assessment, Design to minimize material usage, Design for disassembly, Recyclability, Remanufacture, Energy efficiency, Design to regulations and standards.

UNIT V

REVERSE ENGINEERING AND APPLICATIONS OF ADDITIVE MANUFACTURING

Reverse Engineering, Application of CMM, Laser scanner, CT and MRI scan in acquiring point data ,Software for STL file processing. Application of Rapid prototyping in Medical field, Manufacturing, Automotive industries, Aerospace and Electronics and Retail industries. Leading manufacturer of RP Systems.

22ME041 / 22MEH41 DESIGN FOR MANUFACTURING AND ASSEMBLY 3003

Course Objectives

- To learn the way of specifying geometric dimensioning and tolerancing in engineering drawing
- To familiarize the design considerations for designing components for the casting, welding and forming processes
- To familiarize the design guidelines while designing components which are manufacturing by different machining processes
- To learn the factors affecting easy assembly of parts into a final product
- To impart knowledge about the product life cycle assessments and environmental impact of materials, manufacturing methods and the way to minimize it

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply geometric dimensioning and tolerancing techniques in engineering drawing
- 2. Select appropriate design considerations to minimize difficulty to produce components by casting, welding and forming processes
- 3. Use the design for manufacturing concept to reduce machining time and manufacturing cost
- 4. Analyze and design the parts for easy assembly using DFA guidelines
- 5. Design the components by considering the product life cycle and its environmental impact

GEOMETRIC DIMENSIONING AND TOLERANCING

Tolerance Chains and identification of functionally important dimensions. International Tolerance Grades, Surface finish, Attainable tolerance grades and different machining processes. Geometric Dimensioning and Tolerancing - Location, Form, profile, orientation, run out and Feature tolerance. Tolerance Limits for Assembly - Cumulative effect of Tolerances

UNIT II

DESIGN CONSIDERATIONS FOR CASTINGS, WELDING AND FORMING

1

1

Casting - Pattern, Mould, Casting hole - cast, Cored and Machined holes, Parting line - Redesign of castings based on parting line considerations, Minimizing core requirements. Welding - Stresses in welding - Measures to combat contraction stresses - Welding sequence - Joints in Welding - Weldability of steel - Design of welded structures. Form design aspects for Forging and sheet metal components

UNIT III

DESIGN FOR MANUFACTURE - MACHINING CONSIDERATIONS

Design for Manufacture Guidelines - Design features to facilitate machining - Drills - Milling cutters -Keyways - Doweling procedures, Counter sunk screws - Reduction of machined area Simplification by separation - Simplification by amalgamation. Design for Manufacture: Machinability, Economy, Clampability, Accessibility, Assembly. Redesign for Manufacture -Examples.

UNIT IV

DESIGN FOR ASSEMBLY

Design for Assembly(DFA) Guidelines - Minimizing number of Parts - Insertion and Fastening - Design Guidelines for Part Handling - Effect of Part Symmetry, Part Thickness, Part Size, Weight on Handling Time - Types of Manual Assembly Methods - Effect of Assembly layout on Part Acquisition Time - Assembly Efficiency - DFA index.

UNIT V

DESIGN FOR ENVIRONMENT

Environmental objectives - Global issues, Regional and local issues - Basic Design for Environment (DFE) methods - Design guide lines - Lifecycle assessment - AT&T"s (American Telephone and Telegraph Company) environmentally responsible product assessment, Weighted sum assessment method, Lifecycle assessment method - Techniques to reduce environmental impact - Design to minimize material usage - Design for disassembly, Recyclability, Remanufacture, Energy efficiency - Design to regulations and standards.

22ME042 DATABASE MANAGEMENT SYSTEMS

Course Objectives

- To provide knowledge on the database architecture and purpose of database system.
- To understand the data models, conceptualize and depict a database system.
- To gain knowledge on the normal forms with functional dependencies.
- To impart knowledge on data storage and query processing.
- To learn transaction management and time stamp based protocols.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Differentiate database systems from file system by understanding the features of database system and design a ER model for a database system.
- 2. Develop solutions to a broad range of query and data update problems using relational algebra, relational calculus and SQL.
- 3. Apply the normalization theory in relational databases for removing anomalies.
- 4. Compare database storage and access techniques for file organization, indexing methods and Query Processing.
- 5. Analyze the basic issues of transaction processing, concurrency control, deadlock and its recovery schemes.

22ME043 MECHATRONICS SYSTEM

Course Objectives

- To understand the mechatronics design process.
- To study the data acquisition and control case studies.
- To summarize the application of mechatronics system.
- To explain the real-time system in real-time interfacing
- To explore the problems in mechatronics system.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Develop the mechatronics design process, data acquisition and control through case studies
- 2. Analyse the various system modelling parameters available in mechatronics system.
- 3. Examine the aspects of real time interfacing in mechatronics system design.
- 4. Utilize the different design technology for various applications.
- 5. Select the concept of micro mechatronics system and implementing in real time systems.

UNIT I

9 Hours

3003

INTRODUCTION TO MECHATRONICS SYSTEM

Key elements - Mechatronics Design process -Design Parameters - Traditional and Mechatronics designs - Advanced approaches in Mechatronics - Industrial design and ergonomics, safety.

UNIT II

SYSTEM MODELLING

Introduction-model categories-fields of application-model development-model verification-model validation-model simulation-design of mixed systems-electro mechanics design-model transformation domain-independent description forms-simulator coupling.

UNIT III

REAL TIME INTERFACING

Introduction-selection of interfacing standards Elements of Data Acquisition & control Systems- Over view of I/O process, General purpose I/O card and its installation, Data conversion process, Application Software- LabVIEW Environment and its applications, Vim-Sim Environment & its applications -Man machine interface.

UNIT IV

CASE STUDIES ON MECHATRONIC SYSTEM

Introduction -Fuzzy based Washing machine - pH control system - Autofocus Camera, exposure control -Motion control using D.C.Motor & Solenoids - CNC related -Engine management systems - Controlling temperature of a hot/cold reservoir using PID- Control of pick and place robot - Part identification and tracking using RFID - Online surface measurement using image processing.

UNIT V

MICRO MECHATRONIC SYSTEM

Introduction- System principle - Component design - System design - Scaling laws - Micro actuation -Micro robot - Micro pump - Applications of micro mechatronic components.

22ME044 INDUSTRIAL AUTOMATION

Course Objectives

- To understand the need of automation in various industrial sectors
- To understand different types of PLC programming techniques.
- To understand SCADA systems are used to collect and monitor data from industrial processes.
- To apply DCS system to control a large-scale industrial process.
- To analyze the security of a communication system against potential threats

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply appropriate automation technologies for specific industrial sectors by examining and selecting the optimal system.
- 2. Develop PLC programs using various programming techniques, including programming languages and logical instructions.
- 3. Configure a SCADA system to monitor and control industrial processes, demonstrating the ability to implement its functionalities and tools effectively.
- 4. Analyze the security of a Distributed Control System (DCS) against potential threats, identifying vulnerabilities and areas of improvement.
- 5. Evaluate the effectiveness of security measures in safeguarding communication systems, assessing their capability to protect against potential cyber threats.

Articulation Matrix

UNIT I

CO

BASICS OF AUTOMATION

Automation in Production System-Principles and Strategies of Automation-Basic Elements of an Automated System-Advanced Automation Functions-Levels of Automation-Flow lines, Transfer Mechanisms-Fundamentals and Analysis of Transfer Lines, Fundamentals of IoT

UNIT II

PROGRAMMABLE LOGIC CONTROLLER

PLC Architecture - Processor Memory Organization: Program Files, Data Files- Programming Languages- Wiring Diagrams and Ladder Logic Programs- Instructions: Simple Instructions, Timer, Counter, Program Control, Data Manipulation, Math Instructions - Selection of PLC

UNIT III

SUPERVISORY CONTROL AND DATA ACQUISITION

Elements of SCADA-Functionalities of SCADA-Architecture: Hardware, Software: Development, Runtime mode functions-Tools: Tag database-Recipe database- Alarm Logging-Trends: Real Time, Historical Trends-Security and User Access Management-Management Information System-Report Function.

UNIT IV

DISTRIBUTED CONTROL SYSTEM

Evolution of DCS - Types of Architecture - Local Control Unit - Communication Facilities - Operator and Engineering Interfaces - Operator Displays - Process Interfacing issues.

UNIT V

COMMUNICATION PROTOCOLS

Introduction - Communication Hierarchy, Communication System Requirements - Network Topologies - Communication Modes HART Networks and OSI models- Communication buses -Fieldbus, Modbus, Profibus - Device net - CAN network - System Operation and Troubleshooting.

22ME045 MODELLING OF INDUSTRIAL ROBOTS

3003

Course Objectives

- To understand the different types of end-effector mechanisms and their respective functionalities in robotic systems.
- To understand kinematics, dynamics and programming of robot mechanisms
- To apply trajectory generation, motion analysis of robotic movements and robot vision
- Explain the principles of Lagrangian mechanics and the effects of moments of inertia in robot dynamics.
- Apply the kinematics of wheeled mobile robots and the predictive modeling and system identification techniques used in mobile robotics.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Select the components and recognize the specifications of an Industrial Robot.
- 2. Apply forward and inverse kinematics and DH convention for predicting the position and orientation of serial manipulator.
- 3. Analyse the velocity kinematics and static force of serial manipulator robot.
- 4. Analyse the dynamics and plan the trajectory for industrial robot
- 5. Create an algorithm for mobile robot control by applying suitable controlling techniques.

5	2	1	1		2	1								3	

Articulation Matrix

UNIT I

ROBOTS AND END EFFECTORS

Robotics: A brief history, laws of Robotics, Differentiate serial and parallel manipulator - concept of workcell - selection of robot specification - classification of Industrial robot manipulator based on configuration - end-effector mechanism and types.

UNIT II

KINEMATICS OF ROBOT MANIPULATOR

Representing position and rotation - Dot and Cross product - coordinate frames - rotation in plane rotation in three dimension - Rotational transformation - Translational transformation - Euler angle, Roll, Pitch, Yaw angles Axis/angle representation - rigid motion - Homogeneous transformation - Denavit-Hartenberg convention - inverse and forward kinematics and problems

UNIT III

VELOCITY ANALYSIS AND STATIC FORCE ANALYSIS

Representation of Linear and Angular Velocity of Manipulator Links Skew Symmetric matrix representation Velocity Forward Propagation Velocity / Manipulator Jacobian. Static Force Analysis: Force transformation of robotic manipulators - Force Jacobian - Singularity Analysis, Workspace Singularities

UNIT IV

ROBOT DYNAMICS AND TRAJECTORY PLANNING

Introduction, Lagrangian mechanics, Effects of moments of Inertia, Dynamic equation for two axis planar articulated robot - Trajectory planning, point to point, Continuous path motion

UNIT V

MOBILE ROBOTICS

Introduction - types of mobile robot - kinematics of wheeled mobile robot - predictive modeling and system identification - kalman filters - bayesian estimation - Localization and mapping - ROS and programming.

22ME046 AUTOMATION SYSTEM DESIGN 3003

Course Objectives

- To understand the need for automation across a range of industrial sectors.
- To explain the principles of motion components.
- To study about the technological advancements in transfer lines and automated assembly area.
- To explain the design procedure in automation and comprehend the CIROS software's system integration process.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Identify the need of automation in industries.
- 2. Select the motion components from the manufacturers for particular applications.
- 3. Make use of different instructions available in an automated assembly line for various applications
- 4. Assess the product design automation for high speed automatic assembly.
- 5. Examine the simulation approach and to differentiate the CIROS over other automation systems for design and implementation.

Articulation Matrix

UNIT I

INTRODUCTION TO PROCESS AUTOMATION

Process Automation-paper industry, packaging industry, food processing industry, Integrated design issues in automation systems, Mechatronics design process-benefits, modelling of electromechanical systems, bond graph technique, Automation migration strategy-building blocks of automation systems.

UNIT II

SELECTION OF MOTION COMPONENTS

Selection of motor for automation system, Calculation of inertia force for motor, LM Guide ways, Ball screws, Selection from the manufacturers catalogue based on the applications.

UNIT III

TRANSFER LINES AND AUTOMATED ASSEMBLY

General terminology-takt time, setup time and cycle time, Automated flow lines with storage buffers. automated assembly, Automated assembly-design for types of automated assembly systems, part feeding devices, analysis of multi-station assembly machines-modular fixturing-Flow line balancing.

UNIT IV

DESIGN FOR HIGH SPEED AUTOMATIC ASSEMBLY

Introduction, Design of parts for high speed feeding and orienting, high speed automatic insertion, Analysis of an assembly, General rules for product design for automation-Application of high speed automatic assembly.

UNIT V

SYSTEM INTEGRATION

Issues and systematic approaches, design and simulation using CIROS software, Economics of automation systems design and implementation.

22ME047 MATERIAL HANDLING SYSTEMS 3003

Course Objectives

- To incorporate competency in system visualization and design.
- To impart the knowledge of various material handling systems.
- To enable students to design a material handling systems.
- To identify the appropriate lifting mechanism for a given application.
- To design material handling systems that is safe, efficient, and effective for a variety of working environments.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Choose the right material handling systems with safety and efficiency.
- 2. Select appropriate hoists and winches for the given application.
- 3. Compare different conveyors and elevators and select appropriate material handling for given working conditions.
- 4. Analyze appropriate lifting mechanisms to improve material handling.
- 5. Design various material handling systems based on the working environments.

Articulation Matrix

UNIT I

MATERIALS HANDLING EQUIPMENT

Importance and principles of material handling. Types of intraplant transport facility and applications. Choice of material handling equipment - Surface and overhead equipment - general characteristics of surface and overhead equipment - AGV- AS/RS

253

UNIT II

HOIST AND WINCHES

Basic Principles - Types of Cranes - Jib Cranes - Overhead Travelling Cranes/Bridge Cranes - Gantry Cranes - Wharf Cranes - Pillar Cranes - Tower Cranes - Truck and Wagon Cranes - Crawler Cranes - Railroad/Locomotive Cranes - Floating Cranes - Derricks. Storing equipments like pallets, bins, racks, decking, order picking, positioning equipments

UNIT III

CONVEYORS AND ELEVATORS

Belt Conveyors - Definition, General Characteristics, Types, Parts, Design Aspects, Pneumatic Conveyors - Definition, Advantages and Disadvantages. Bucket Elevators - Definition, Specification and Uses, Types of Bucket Elevators, Selection of Elevators, Skip Hoists, Freight Elevators, Lifts.

UNIT IV

CONVEYORS AND ELEVATORS

Types - description - applications of belt conveyors, apron conveyors and escalators pneumatic conveyors, screw conveyors and vibratory conveyors. Bucket elevators: design - loading and bucket arrangements - Cage elevators - shaft way, guides, counter weights, hoisting machine, safety devices.

UNIT V

DESIGN OF MATERIAL HANDLING SYSTEMS

Design of hoisting elements: Welded and roller chains - Hemp and wire ropes - Design of ropes, pulleys, pulley systems, sprockets and drums, Load handling attachments. Design of arresting gear - Brakes: shoe. design and applications of belt conveyors, apron conveyors. Design of bucket elevators and fork lift trucks.

22ME048 ARTIFICIAL INTELLIGENCE IN AUTOMATION

Course Objectives

- To understand the various characteristics of intelligent agents
- To understand the different search strategies in AI
- To represent knowledge in solving AI problems and understand the different ways of designing software agents
- To know about the various applications of AI

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Represent the function of intelligent agents with the problem reduction.
- 2. Select an appropriate paradigms for any type of AI problem
- 3. Choose the topological method to decide path planning technique.
- 4. Indicate the localization technique to explore map planning.
- 5. Design applications for Natural Learning Process that uses Artificial Intelligence.

3003

INTRODUTION TO AI AND INTELLIGENT AGENTS

Foundations, History - Intelligent agents, Agents - Nature of Environments, Structure of agents. Problem solving agents - Problem formulation - State space, Search space. Problem reduction - Searching for solutions: Uninformed search strategies. Informed search strategies - Heuristic functions.

UNIT II

ROBOTIC PARADIGMS

Overview of the Three Paradigms - Hierarchical Paradigm: attributes - representative architectures -Reactive paradigm: attributes - subsumption architecture - potential field methodologies - Designing a reactive implementation: a primitive move-to-goal behavior, an abstract follow-corridor behavior -Designing a Reactive Behavioral System - The Hybrid Deliberative/Reactive Paradigm- Attributes -Architectural Aspects- Managerial Architectures- State-Hierarchy Architectures Model-Oriented Architectures.

UNIT III

TOPOLOGICAL AND METRIC PATH PLANNING

Landmarks and gateways - relational methods - associative methods - case study - Metric Planning: Configuration Space -Cspace representations - graph based planners - wavefront based planners -Interleaving Path Planning and Reactive Execution

UNIT IV

LOCALIZATION AND MAP MAKING

Sonar sensor model-Bayesian-Dampster-Shafer theory-HIMM-comparison of methods-localizationexploration.

UNIT V

LEARNING AND NATURAL LANGUAGE PROCESSING

Forms of learning-NLP: Language models-Natural language for communications-Speech recognition.

22ME049 MACHINE LEARNING IN AUTOMATION

3003

Course Objectives

- To Understand the fundamentals of various machine learning algorithms
- To gain knowledge on important methods in ANN, Fuzzy and Genetic algorithm
- To study the machine learning algorithms for various heuristic and non heuristic algorithms.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Differentiate the basics of supervised and semi supervised learning methods
- 2. Retrieve the unsupervised and reinforcement learning methods involved in artificial learning
- 3. Interpret the concept of artificial neural networks and their control applications
- 4. Implement the fuzzy knowledge representation and multi objective decision making controllers
- 5. Compute the knowledge about various heuristic and non heuristic algorithms.

B.E. - MECH | Minimum Credits to be earned: **164** | Regulations 2022

UNIT I

SUPERVISED AND SEMI SUPERVISED LEARNING METHODS

Introduction to learning & classifiers - LDA - ANN - Naive Bayes classifier- decision tree Regression-Ordinary Least Squares - linear and Logistic Regression- Gaussian process -Stepwise Regression -Multivariate Adaptive Regression Splines (MARS) - Locally Estimated Scatterplot Smoothing (LOESS) overview of nearest neighbour - Support vector machines- Temporal difference learning - Q-learning

UNIT II

UNSUPERVISED

Expectation -maximization (EM) - Vector quantization, Clustering Fuzzy K & C means algorithm -Density-based spatial clustering of applications with noise (DBSCAN) - Conceptual clustering-Association rule learning - Apriori algorithm- SVD

UNIT III

NEURAL NETWORK

Perceptron - Probabilistic Neural Network (PNN) - Back-Propagation (BPN) - Hopfield Network - Self-Organizing Map (SOM) - Learning Vector Quantization (LVQ) - Adaptive Resonance Theories 1 & 2 -Case studies on GA based algorithm development

UNIT IV

FUZZY CLASSIFICATION

Basic concepts in Fuzzy Set theory-Fuzzy logic controllers - Principles - Various industrial Applications of Fuzzy logic control - Adaptive Fuzzy systems - Fuzzy Decision making - Fuzzy classification - Fuzzy pattern Recognition - Image Processing applications - Fuzzy optimization - Case studies on fuzzy based algorithm development

UNIT V

HEURISTIC AND NON HEURISTIC ALGORITHMS

Introduction to genetic algorithm -initialization, selection, mutation and termination Swarm intelligence -PSO-ACO - Tabu search - Reactive search optimization (RSO)- cross-entropy (CE) methods. Case studies on GA based algorithm development.

22ME050 VIRTUAL INSTRUMENTATION SYSTEMS

Course Objectives

- To impart knowledge in studying virtual instrumentation.
- To understand the basic building blocks of virtual instrumentation.
- To understand the various techniques of interfacing of external instruments of PC.
- To understand the various graphical programming environment in virtual instrumentation
- To apply few applications in virtual instrumentation

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Identify the key components and functionality of Virtual Instrumentation (VI) systems.
- 2. Construct VI-based solutions to address specific engineering problems.
- 3. Develop software algorithms and hardware interfaces for efficient VI implementation.
- 4. Categorize different types of sensors and actuators used in VI systems.
- 5. Experiment with real-time data acquisition and control systems using VI tools.

Articulation Matrix

UNIT I

VIRTUAL INSTRUMENTATION SYSTEM INTRODUCTION

Definition and Architecture of Virtual Instrumentation - Virtual Instruments Versus Traditional Instruments - Conventional Virtual Instrumentation - Virtual Instruments using LabVIEW - Virtual Instrumentation in the Engineering process. Virtual Instrumentation System Environment- Front panel and Block Diagram - Tools palette - Data flow programming - "G" programming - Data types and Conversion - Representation and precision - Creating and saving VIs - Writing - Editing - Debugging and Running a VI - Creating subVIs

UNIT II

PROGRAMMING STRUCTURES

FOR loop - WHILE loop - Shift register - Feedback node - CASE structure - Sequence structures - Formula nodes - Arrays - Array operations - Clusters - Cluster functions - Waveform Graphs and Waveform Charts - Strings - String functions -File I/O - File I/O Functions - Attribute modes: Local and Global variables

UNIT III

I/O AND HARDWARE ASPECTS

Components of measuring system - Classification of signals - Transducers and sensors - Signal conditioning functions - Signal Grounding - Digital I/O techniques - Data Acquisition using VI - Components of DAQ - DAQ Assistant - Measurement and Automation Explorer - DAQ Hardware and Software

UNIT IV

INSTRUMENT INTERFACES AND BUSES

Drivers and Communication standards -RS232- GPIB: Types of GPIB messages - Physical Bus structure - VISA Programming - VISA Attributes - USB: Architecture - Electrical specifications - Functions

UNIT V

APPLICATIONS OF VIRTUAL INSTRUMENTATION

Developing Remote front panel VI applications - Client server applications in VI - Machine vision system - Introduction to image processing modules - Motion Control: Components of a motion control system -Software for configuration - Prototyping and Development

22ME051 AUTOMATIC CONTROL SYSTEMS

Course Objectives

- To understand the control system representation
- To analyze the control system in terms of time domain specifications
- To analyze the control system in terms of frequency domain specifications
- To understand the state space analysis of control systems
- To determine the stability of a control system from its transfer function

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Course Outcomes (COs)

- 1. Construct block diagrams and signal flow graphs to represent control systems effectively.
- 2. Examine the time response of control systems using time-domain specifications.
- 3. Compare the frequency response of control systems using frequency-domain specification.
- 4. Model control systems using state-space representation and analyze their behavior.
- 5. Discover the stability characteristics of control systems using appropriate analysis methods.

UNIT I INTRODUCTION

9 Hours

3003

Components of Automatic control systems- Open loop and closed loop systems - Examples - Transfer function - Modeling of physical systems - Mechanical Systems - Translational and Rotational systems - Hydraulic systems and Electrical Systems - Transfer function of DC servomotor - AC servomotor - Block diagram - reduction techniques - Signal flow graph - Mason''s gain formula.

UNIT II

TIME DOMAIN ANALYSIS

Continuous time signals - Standard Test signals - Classification of continuous time systems - Linear-Nonlinear - Time variant - Time invariant - Static - Dynamic - Time response of second order system -Time domain specifications - Types of systems - Steady state error constants -Generalized error series -Introduction to P, PI and PID modes of feedback control. - Introduction to lead, lag and lead-lag compensators.

UNIT III

FREQUENCY DOMAIN ANALYSIS

Frequency domain specifications - Estimation for second order systems- Correlation between time and frequency domain specifications for second order systems - . Bode plot - Determination of Transfer Function from Bode plot - All pass minimum phase and non-minimum phase systems - Polar plot -Determination of gain and phase Margins from the plots.

UNIT IV

STATE SPACE ANALYSIS

Limitations of conventional control theory - Concepts of state, state variables and state model - state model for linear time invariant systems - Introduction to state space representation using physical - Phase and canonical variables - State equations - Transfer function from the State model - Solutions of the state equations -State Transition Matrix - Concepts of controllability and observability.

UNIT V

SYSTEM STABILITY

Concept of stability - stability & location of the poles in S-plane - Characteristic equation - RouthHurwitz stability criterion - Root Locus concepts- Construction of root locus - Root contours - Absolute and Relative stability - Nyquist stability - Nyquist stability criterion - Assessment of relative stability - Gain and Phase Margin.

22ME052 INDUSTRIAL NETWORKING

Course Objectives

- To understand the division of network functionality into layers.
- To familiarize the functions and protocols of each layer of TCP/IP protocol suite.
- To understand the components required to build different types of network.
- To learn concepts related to network addressing.
- To understand the flow of information from one node to another node in the network and to learn the application layer utilities.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Compare OSI model with TCP/IP protocol suite and design a network based on four different topologies.
- 2. Construct and analyze error detection, correction, and flow control algorithms to ensure efficient node-to-node communication.
- 3. Identify appropriate routing algorithms and apply them to optimize the performance of a given network.
- 4. Develop and experiment with client-server applications using TCP/UDP and plan algorithms for reliable end-to-end communication.
- 5. Inspect the features of application-layer utilities and model innovative applications based on their capabilities.

Articulation Matrix

5	3	2	-	-	-	-	-	-	-	-	1	-	-	-	2

UNIT I

INTRODUCTION

Modern instrumentation and control systems - Terminology - Topology - Mechanisms - Protocols -Standards - Common problems and solutions - Grounding/shielding and noise - EIA-232 interface standard - EIA-485 interface standard - Current loop and EIA-485 converters - Fibre optic cable components and parameters - Basic cable types - Connection fibers - troubleshooting.

UNIT II

COMMUNICATION BUS PROTOCOLS

Overview - Protocol structure - Function codes - Modbus plus protocol - Data Highway - AS interface (AS-i)-DeviceNet: Physical layer - Topology - Device taps - Profibus PA/DP/FMS: Protocol stack -System operation. CAN BUS: Concepts of bus access and arbitration - CAN: Protocol-Errors: Properties detection - processing - Introduction to CAN 2.0B and EtherCAT.

UNIT III

ETHERNET SYSTEMS

IEEE 802.3 - Physical layer - Medium access control - Collisions - Ethernet design rules - Fast and gigbit Ethernet systems - design considerations - Internet layer protocol - UDP - TCP/IP - ProfiNet - LAN system components - Structured cabling - Industrial Ethernet - Troubleshooting Ethernet.

UNIT IV

WIRELESS COMMUNICATIONS

Radio spectrum - Frequency allocation - Radio modem - Intermodulation - Implementing a radio link -RFID: Basic principles of radio frequency identification - Transponders - Interrogators - Wireless HART.

UNIT V

APPLICATIONS

Automotive communication technologies - Design of automotive X-by-Wire systems - The LIN standard - The IEC/IEEE Train communication network: Applying train communication network for data communications in electrical substations.

22ME053 AUTOMOTIVE SYSTEM 3003

Course Objectives

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To provide knowledge on the working of fuel supply and engine auxiliary system in various automobiles.
- To learn the function of various components in transmission and drive lines of a vehicle
- To study the concept and working of steering, brakes and suspension systems in automobile.
- To impart knowledge on electrical and electronic systems of automobiles.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Demonstrate the operating principles and constructional details of various automobile components
- 2. Illustrate the function of fuel supply and engine auxiliary systems
- 3. Illustrate the function of various components in transmission and drive lines of a vehicle.
- 4. Exemplify the types of steering system, and braking system.
- 5. Interpret the functioning of suspension system and emission control systems.

Articulation Matrix

UNIT I

VEHICLE BODY AND AERODYNAMICS

drag, lift and methods of reducing.

UNIT II

FUEL SUPPLY MANGEMENT SYSTEMS

Spark ignition engine - Electronic fuel injection system, mono-point and multi Point injection systems. Compression ignition engine- Inline fuel injection system, Common rail direct fuel injection system.

Types of Automobiles - vehicle construction, chassis, frame and body. Vehicle aerodynamics -aerodynamic

UNIT III

FUEL SUPPLY MANGEMENT SYSTEMS

Clutch - Types. Gearbox - Types. Automatic transmission system. Fluid flywheel, torque convertors, propeller shaft, slip joint, universal joints, differential and rear axle drives - hotch kiss drive and torque tube drive.

UNIT IV

STEERING SYSTEM AND BRAKING SYSTEM

Wheels and Tyre Construction. Steering geometry, types of steering and Power steering. Braking Systems -Types-disc brake, drum brake, hydraulic brake and air brake. Electronic Brake Distribution (EBD)

UNIT V

SUSPENSION SYSTEMS AND EMISSION CONTROL SYSTEMS

Suspension systems - Types - rear suspension and front suspension. Active Suspension System(ASS). Engine emission control - Three-way catalytic converter, Smoke reduction methods. Euro Emission norms and BS Emission norms.

FOR FURTHER READING

Electronic Stability Program(ESP), Traction Control System (TCS), Global Positioning System (GPS), Electric, Hybrid vehicle.

22ME054 AUTOMOTIVE ELECTRONIC SYSTEMS 3003

Course Objectives

- To understand the concepts of Automotive Electronics and its trends
- To understand the concepts of Automotive Electricals and its trends
- To understand sensors and sensor monitoring mechanisms aligned to automotive systems, different signal conditioning techniques, interfacing techniques and actuator mechanisms.
- To understand role of Microcontrollers in ECU design and choice of appropriate Hardware and Software.
- To describe various communication systems, wired and wireless protocols used in vehicle networking.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Identify the current trends of automotive electronics systems
- 2. Exemplify the current trends of automotive electrical systems
- 3. Select appropriate automotive Sensors and Actuators for modern automobiles
- 4. Understand Interfacing of sensors and actuators using RTOS
- 5. Analyse the communication protocol suitable for automobile

Articulation Matrix

UNIT I

ELECTRONICS IN AUTOMOBILE

Introduction - vehicle power supply controllers and lighting modules, door control modules, Electronic control of suspension, Safety electronics: active safety systems: ABS, ASR, ESP, Infotainment electronics: car audio, telematics systems, navigation systems, multimedia systems.

UNIT II

ELECTRICALS IN AUTOMOBILE

Electric drives- AC drives, DC drives, Starter drive mechanisms, Starter Switches and Solenoids, Electric power steering, Charging circuits for D.C. Generator, A.C. Alternators.

UNIT III

AUTOMOTIVE NEURAL NETWORKS

ANN, artificial and biological neuron, learning (supervised and unsupervised learning). McCulloh-Pitts neuron, Linear separability, Hebb network. Perceptron Network, Adaline, Medaline. Convolution Neural Networks- Feed Forward networks, Back propagation network.

UNIT IV

REAL TIME OPERATING SYSTEM (RTOS)

Introduction - RTOS. Tasks & task states (Pre-emptive & Non-pre-emptive, scheduler, interrupt -Interrupt latency and context switch latency) - Task, multi-tasking, task synchronization, inter-task communication, shared data problem and its prevention - Features of a typical embedded RTOS (MuC/OS-II).

UNIT V

Reference(s)

COMMUNICATION PROTOCOLS

Introduction to control networking-Communication protocols in embedded systems-SPI, I2C, USB. Vehicle communication protocols-Introduction to CAN, LIN, FLEXRAY, MOST, AUTO SAR.

22ME055 ELECTRIC AND HYBRID VEHICLE SYSTEMS

3003

Course Objectives

- To introduce fundamental concepts and specifications of electric and hybrid vehicles
- To acquire knowledge technologies related to electric, hybrid and fuel cell powered vehicles
- To appreciate the role of electronics in providing improved control to a variety of vehicle systems
- To Measure and Estimate the energy consumption of the Hybrid Vehicles.
- To Identify various energy source options like fuel cell and hydrogen storage system

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Explain the current scenario of demand for fossil fuels, effects of automobile pollution and strategy of next generation vehicles
- 2. Identify the requirements of Electric Drive train for hybrid and electric vehicles
- 3. Select appropriate electric motor and drive controls for EVs and HEVs
- 4. Analyze the performance of energy storage systems in electric and hybrid vehicles.
- 5. 5elect appropriate Fuel Cell Technology for EVs and HEVs.

UNIT I

INTRODUCTION

Usage Pattern of Automobiles in cities and highways, Air Pollution: NOx, CO, HC, PM emission, Global Warming Health Impacts, Petroleum Resources, Induced Costs, Importance of Different Transportation Development, Strategies to Future Oil Supply, Strategies for Next Generation Vehicles.

UNIT II

ELECTRIC AND HYBRID VEHICLES

Configuration Layouts of early EVs and modern EVs, merits and demerits, Concept of Hybridization, Hybrid electric drive trains - types of hybrid drive train topologies, Speed & Torque Couplings, Types of HEVs, Regenerative braking strategies, Start/Stop in EVs and HEVs, Merits and demerits

UNIT III

PROPULSION SYSTEM FOR EVS

Basic concept of electric traction, Power-Torque Characteristic curves, Selection of Electric motors, Motors types: DC motor drives, induction motor drives, brushless DC PM motor drives, Switched Reluctance motor drives, starter/alternator, Electric Control Drives.

UNIT IV

ENERGY MANAGEMENT SYSTEM FOR EVS

Energy storage requirements in HEVs and EVs, Energy storage techniques - battery based energy storage: Engine starter batteries, Traction Batteries, Super capacitor based energy storage and flywheel based energy storage, Hybridization of different energy storage devices

UNIT V

FUEL CELL TECHNOLOGIES

Fuel cell electric vehicles-operating principle, Fuel cell technologies- alkaline fuel cell- proton exchange Membrane, direct methanol fuel cell, phosphoric acid fuel cell, molten carbonate fuel cell, solid oxide fuel cell, Fuel reformer, Hydrogen storage systems

22ME056 VEHICLE DYNAMICS AND CONTROL 3003

Course Objectives

- To acquire knowledge on road vehicle dynamics, stability and handling
- To develop an understanding of the relationships between vehicle design variables and vehicle dynamic behaviour
- To apply modeling techniques to predict the dynamic behavior of road vehicles
- To calculate and refer the loads and forces associated to the vehicles
- To analyse the behavior of the vehicles under acceleration, ride and braking

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Apply laws of mechanics to calculate dynamic, road loads and equation motion
- 2. Analyze gradeability, tractive force, barking force and stopping distance of a vehicle
- 3. Modeling the passenger car suspension of a vehicle
- 4. Analyze the cornering and braking effort of a tire
- 5. Apply steady state cornering model to design the steering system of a vehicle

Articulation Matrix

273

Vehicle and Earth fixed coordinate system, Euler angles, Dynamic axle loads - static loads on level ground - low speed acceleration, Loads on Grades. Road loads - rolling resistance - grade resistance. Equation of motion for Forced Undamped and forced Damped Vibration, Single DOF, Two DOF and Multi DOF systems

UNIT II

PERFORMANCE MODE

Acceleration - free body diagram of accelerating vehicle, maximum transferable tractive force and gradability. Deceleration - free body diagram of decelerating vehicle, maximum decelerating rates, stopping distance and maximum braking force. Prediction of Vehicle performance. Antilock Brake Systems, Traction control

UNIT III

RIDE MODE

Human response to vibration, Sources of Vibration. Design and analysis of passive, semi-active and active suspension using quarter car, half car and full car model. Influence of suspension stiffness, suspension damping, and tyre stiffness. Control law for LQR, H-infinite and skyhook damping. Air suspension system and their properties

UNIT IV

TIRE DYNAMICS

Tire forces and moments, tire structure, longitudinal and lateral force at various slip angles, rolling resistance, tractive and cornering property of tire. Performance of tire on wet surface. Ride property of tires. Magic formulae tire model, Estimation of tire road friction. Test on various road surfaces. Tire vibration

UNIT V

HANDLING MODE

Vehicle control - low speed cornering and static steering - Steady-state cornering - steering factors, vehicle control parameters (under steer, neutral steer and over steer), roll steer, compliance steer, ride steer, slip angle steer. Steady state handling - lateral acceleration gain, characteristic speed, yaw velocity gain and critical speed. Effect of braking on vehicle handling

INTRODUCTION

22ME057 INTELLIGENT VEHICLE SYSTEM 3003

Course Objectives

- To understand concept of autonomous and connected vehicle
- To learn about sensor technology of automated vehicle
- To understand about computer vision and deep learning
- To acquire knowledge on localisation and path planning
- Become familiar with the concept of connected vehicles

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Access the evolution of automotive electronic and connected vehicle concepts
- 2. Apply the knowledge for selection of sensor and communication protocols for interfacing sensors
- 3. Apply knowledge of Computer Vision and Deep learning in autonomous vehicle
- 4. Apply fundamentals of Localization and Path planning in autonomous vehicle
- 5. Evaluate the intelligent systems associated with Autonomous vehicle

UNIT I

INTRODUCTION

Introduction to the Concept of Automotive Electronics, modern trends in Auto industry, various intelligent systems present in the vehicle, Need for IVS, Benefits, Advanced Driver Assistance Electronic Systems Basic Control System Theory applied to Automobiles-Overview of the Operation of ECUs, Basic Cyber-Physical System Theory and Autonomous Vehicles, Role of Surroundings Sensing Systems and Autonomy, Role of Wireless Data Networks and Autonomy

UNIT II

COMPUTER VISION AND DEEP LEARNING Introduction, Computer Vision: - Computer Vision Fundamentals, Deep Learning:- Neural Networks, Deep

UNIT III

CONNECTED CAR TECHNOLOGY

Connectivity Fundamentals, Navigation and Other Applications, Vehicle-to-Vehicle Technology and Applications, Vehicle-to-Roadside and Vehicle-to-Infrastructure Applications, Wireless Security Overview Connected Car Display Technology- Center Console Technology, Gauge Cluster Technology, Heads-Up Display Technology, Warning Technology-Driver Notification

Neural Networks, Convolutional Neural Networks, Keras , TensorFlow, Sensor Fusion: - Kalman Filters

UNIT IV

IOT IN AUTOMOBILES

Developments on IoT in Automotive Sector, Connected Car Services and Applications- Infotainment, Vehicle and Smartphone Integration, Driving Insights- Analytics, On Board Diagnostics, Real Time Driver Monitor, Geo fencing and Speed Monitoring, Stolen Vehicle Tracking, Biometrics Information for Driver Identification, Vehicle Communication- V2V, V2X, V2R, IoT in Intelligent Transportation, Introduction to Autonomous Vehicle.

UNIT V

AUTONOMOUS VEHICLE COMFORT SYSTEMS AND APPLICATIONS

Introduction- Design overview, circuit diagram and Algorithm, Driver safety systems- ABS, Driver Aid system- ESP, Blind Spot monitoring system, Collision mitigation system, Adaptive Headlamps, Automatic parking system, Eight way seating system, Adaptive cruise control system, Collapsible and tiltable steering column, Lane Departure Warning.

22ME058VEHICLE MAINTENANCE3003

Course Objectives

- To impart the knowledge on safety and tools used in workshop.
- To learn about the maintenance procedure of engine and engine subsystems.
- To provide the knowledge on transmission and driveline maintenance procedure.
- To impart the knowledge on the maintenance procedure of steering, brake, suspension and wheel maintenance.
- To learn about electrical and air conditioning maintenance procedure.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Compare the maintenance practices, safety and tools used in workshop.
- 2. Explain the engine and engine subsystem maintenance procedure.
- 3. Summarise the transmission and driveline maintenance procedure.
- 4. Explain the steering, brake, suspension and wheel maintenance maintenance procedure.
- 5. Summarise the electrical and air conditioning maintenance procedure.

Articulation Matrix

277

UNIT I

MAINTENANCE WORKSHOP PRACTICES SAFETY AND TOOLS

Maintenance- Need, Importance, Primary and secondary functions, Policies,- Classifications of maintenance work - Vehicle Insurance - basic Problem Diagnosis. Automotive Service procedures- Work shop operations-Workshop manual- Vehicle identification. Safety- Personnel, Machines, and equipment, vehicles, fire safety- First aid. Basic tools, Special service tools, Measuring instruments, Condition checking of seals, gaskets and sealants. Scheduled maintenance services- service intervals - towing and recovering.

UNIT II

ENGINE AND ENGINE SUBSYSTEM MAINTENANCE

General Engine service- Dismantling of Engine components- Engine repair - Working on the ancillariesservice of basic engine parts, cooling and lubricating system, Fuel system, Intake and exhaust systems, Electrical system- Electronic fuel injection and engine management service - Fault diagnosis -servicing emission controls.

UNIT III

TRANSMISSION AND DRIVELINE MAINTENANCE

Clutch- general checks, adjustment and service -Dismantling, Identifying, Checking and assembling of transmission, transaxle- road testing -removing and replacing propeller shaft, servicing of cross and yoke joint and constant velocity joint - Rear axle service points -Removing axle shaft and bearings- servicing differential assemblies- fault diagnosis.

UNIT IV

STEERING, BRAKE, SUSPENSION ANDWHEEL MAINTENANCE

Inspection, Maintenance and service of steering linkage, steering linkage, steering column, rack and pinion steering, recirculating ball steering service- worm type steering, power steering system. Inspection, maintenance and service of hydraulic brake, drum brake, disc brake, parking brake, bleeding of brakes. Inspection, Maintenance and service of McPherson strut, coil spring, leaf spring, shock absorber, Dismantling and assembling procedures. Wheel alignment and balance, Removing and fitting of tyres, tyre wear and tyre rotation.

UNIT V

ELECTRICAL, AIR CONDITIONING AND BODY MAINTENANCE

Maintenance of batteries, starting system, charging system and body electrical- Fault Diagnosis using scan tools. Maintenance of Air conditioning parts- compressor, condenser, expansion valve, evaporator-replacement of hoses- leak detection - AC Charging - Fault Diagnosis. Vehicle Body repair- panel beating, tinkering, soldering, polishing, painting.

22ME0XA MODELLING AND ANALYSIS OF COMPLEX GEOMETRIES 1001

Course Objectives

- To learn the basic principles of modelling and analysis of complex geometries.
- To identify the application and characteristics of Hypermesh in various industries.
- To understand the polyhedral, Tetrahedral and hexahedral cell shape based core meshes.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Apply the concepts learned to solve real-world engineering problems in various industries.
- 2. Analyze the specific finite element models using problem solving skills.

22ME0XB INDUSTRIAL IoT SMART TECHNOLOGY

1001

Course Objectives

- To explore IIoT technologies and Setting up IIoT Devices and Networks
- To provide hands-on training on implementing IIoT solutions.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. To design IIoT System Architecture for industry applications
- 2. To implement IIoT Devices, Integrating with Cloud Services.

Articulation Matrix

22ME0XC AUTONOMOUS ROBOT KINEMATICS AND CONTROL IN ROS 1001

Course Objectives

- Apply the technical challenges in the kinematic model and design of autonomous robots in the ROS platform.
- Develop the control algorithm for navigation, path planning and obstacle avoidance for mobile robots using Python/C++ in ROS.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Design the kinematic model for Mobile Robot in ROS platform.
- 2. Create the navigation and path planning algorithm for mobile robots in ROS gazebo.

22ME0XD VEHICLE MODELLING USING CARMAKER 1001

Course Objectives

- This course provides an in-depth exploration of IPG CarMaker, a simulation tool widely used in the automotive industry for vehicle dynamics analysis and control system development.
- Students will gain hands-on experience with CarMaker, focusing on vehicle dynamics, suspension control and Powertrain.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications

Course Outcomes (COs)

- 1. Understand the basic concepts of vehicle dynamics, powertrain drive source and how they can be applied to vehicle simulations in CarMaker
- 2. Investigate the different aspects of vehicle control and how they can be used to improve the vehicle's safety and performance.

DIGITAL ENERGY SYSTEMS

L T P C 1 0 0 1

Course Objectives (CO)

- To understand the concepts and principles of digital energy systems.
- To explore the role of data analytics in optimizing energy generation, distribution, and consumption.
- To learn about IoT applications and sensor networks for energy monitoring and control.

Program me Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Demonstrate a comprehensive understanding of digital energy systems, including smart grids, IoT integration, data analytics, and AI applications.
- 2. Apply knowledge of IoT devices, data analytics techniques, and AI algorithms to optimize energy systems, enhance efficiency, and improve reliability.
- 3. Develop energy management solutions using digital tools and techniques, including energy forecasting models, demand response strategies, and optimization algorithms.

ENERGY EFFICIENT BUILDINGS

```
L T P C
1 0 0 1
```

Course Objectives

- To understand the principles of building energy efficiency.
- To evaluate building energy performance.

Programme Outcomes (POs)

- PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4 Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO11 Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PSO1 Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.
- PSO2 Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze, and provide solutions for fluid flow and thermal related applications.
- PSO3 Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Identify and improve the energy efficiency of buildings.
- 2. Apply energy efficiency technologies to buildings.

COs. No.	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

22ME0XH DESIGN CONSIDERATIONS FOR 3D PRINTING Т L Р С 0 0

Course Objectives

- To familiarize the students with support structures, overhangs, and orientation optimization techniques • for 3D printing.
- To introduce the students to geometric considerations and constraints unique to 3D printing technology.
- To identify the key components skills to design 3D printable objects that meet functional requirements and quality standards.

Programme Outcomes (POs)

- Apply the knowledge of mathematics, science, engineering fundamentals, and an PO1 engineering specialization to the solution of complex engineering problems.
- Identify, formulate, review research literature, and analyze complex engineering problems PO2 reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7 Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8 Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO12 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- PSO1 Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Analyze the designs by exploring geometric considerations and addressing constraints specific to 3D printing technology.
- 2. Apply onboard diagnostics (OBD) systems in monitoring and diagnosing engine and vehicle electronic faults
- 3. Evaluate the impact of engine electronics on vehicle performance, fuel efficiency, and emissions

CO. No.	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

Articulation Matrix

Design Considerations for 3D Printing

Design principles for 3D printing. Geometric considerations for 3D printing. Support structures and overhangs. Design of Support system - Support structures and overhangs. Wall thickness and feature resolution. Orientation and build direction optimization. Material considerations in design. Functional Requirements & Case studies - Design for functional requirements. Design for post-processing and finishing. Case studies and practical examples.

22ME0I SMART MATERIALS FOR ENERGY STORAGE L T P C 1 0 0 1

Course Objectives

- To understand the fundamentals of key smart materials for energy applications
- To design, analyse and propose solutions for energy harvesting, conversion, or storage using smart materials.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze, and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Examine the working principles of the smart materials for energy applications.
- 2. Analyse the problems in smart materials for energy applications and will provide solution.

COs. No.	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

Smart Materials for Energy Storage

Introduction to Smart Materials-Classification, Fundamentals, properties, different fabrication techniques and application of Piezoelectric Materials, Thermoelectric Materials, Shape Memory Alloys and other Smart Materials. Piezoelectricity: direct and converse effects- Properties and applications of various piezoelectric materials (ceramics, polymers) - Energy harvesting using piezoelectric materials. Measure output voltage and power generated by the device- calculate energy conversion efficiency and analyze performance parameters. Hands-on experience with basic characterization techniques (e.g., XRD, SEM, electrical impedance spectroscopy)

CFD ANALYSIS IN ENERGY SYSTEM

Course Objectives

- To provide students with a comprehensive understanding of the principles of CFD and its application to nonreactive energy systems.
- Apply CFD techniques to design and optimize nonreactive energy systems.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO1. Design, analyse, and evaluate the performance of real-world problems in the field of Electrical and Electronics using contemporary tools.

PSO2. Apply knowledge skills and attitude to conduct experiments and interpret data to solve complex engineering problems in the power systems network, power electronics, electric drives and develop control strategies by considering economic and environmental constraints.

Course Outcomes (COs)

- 1. Apply appropriate numerical methods such as finite difference, finite volume, or finite element methods to solve fluid flow and heat transfer problems in nonreactive energy systems.
- 2. Apply CFD techniques to design and optimize nonreactive energy systems, including heat exchangers, thermal systems, and renewable energy devices, considering factors such as efficiency, performance, and sustainability.

22ME0XK CONTROL SYSTEM DESIGN IN UNDERWATER VEHICLES L T P C 1 0 0 1

Course Objectives

- To apply fundamental engineering principles to underwater robotics.
- To evaluate different types of control systems for underwater vehicles.

Programme Outcomes (POs)

- PO1 Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2 Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- PO3 Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO5 Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- PO6 Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO9 Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO11 Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PSO1 Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing

Course Outcomes (COs)

- 1. Demonstrate knowledge of various underwater robots and their applications.
- 2. Design a control algorithm for an underwater vehicle.

22ME0XL DESIGNING AND MANUFACTURING OF MOULD AND DIE OF L T P C VARIOUS INDUSTRIAL COMPONENTS 1 0 0 1

Course Objectives

- Identify the various Industrial materials used in Automotive, Home Appliance and Medical fields.
- Understand the basic design of mould & die using software.
- Apply the CNC programming for complex design using CAM software.

Programme Outcomes (POs)

- PO1 Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2 Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3 Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO5 Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- PO7 Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and the need for sustainable development.
- PO12 Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- PSO2 Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Summarize the plastic processing methods, machine and tooling used for it.
- 2. Design the mould and dies for plastic parts making and prepare CNC program using CAM

GEARBOX DESIGN AND INTRODUCTION TO PLANETARY GEARBOX

L T P C 1 0 0 1

Course Objectives

- Understand Fundamental Principles of Gearbox Design.
- Explore Gearbox Manufacturing and Material Selection.
- Apply Machine Design Concepts to Gearbox Components.

Programme Outcomes (POs)

- PO1 Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2 Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3 Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO5 Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- PO7 Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and the need for sustainable development.
- PO9 Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO12 Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- PSO1 Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.
- PSO2 Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. To design and perform detailed analysis of gearbox systems, including the calculation of gear ratios, torque transmission, and load distribution.
- 2. To develop the ability to troubleshoot and solve complex design challenges related to gearboxes, utilizing innovative thinking to improve performance, reduce noise and vibration

22OCS01 OBJECT ORIENTED PROGRAMMING

3003

Course Objectives

- Understand the concepts of Object Oriented Programming
- Study the concepts of objects and classes.
- Familiarize in the types of constructors.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Identify the characteristics and data types of C++ language.
- 2. Develop programs using objects and classes for real world applications
- 3. Construct programs to implement operator overloading and inheritance techniques
- 4. Apply Polymorphism and File streams concepts to develop C++ program
- 5. Design applications using templates and apply exception handling mechanisms

UNIT I INTRODUCTION

9 Hours

Need for object oriented programming - Procedural Languages vs. Object oriented approach - Characteristics Object oriented programming - C++ Programming Basics: Basic Program Construction - Output Using cout - Input with cin - Data types- Variables and Constants - Operators - Control Statements-Manipulators - Type conversion. Function Prototyping- call by reference, return by reference- Inline function- Default arguments - Function overloading.(sona)

UNIT II OBJECTS AND CLASSES

Objects and Classes Simple Class - C++ Objects as Physical Objects - C++ Object as Data types-CONSTRUCTORS: Parameterized Constructors - Multiple Constructors in a Class - Constructors with Default Arguments - Dynamic Initialization of Objects - Copy and Dynamic Constructors - Destructors(PSG) - Structures and Classes - Arrays and Strings

UNIT III

OPERATOR OVERLOADING AND INHERITANCE

Operator Overloading and Inheritance Need of operator overloading- Overloading Unary Operators-Overloading binary Operators - Overloading Special Operators - Data Conversion Inheritance: Derived Class and Base Class - Derived Class Constructors-Overriding Member Functions-Class Hierarchies- Public and Private Inheritance-Levels of Inheritance-Multiple Inheritance.

UNIT IV

POLYMORPHISM AND FILE STREAMS

Polymorphism and File Streams Virtual Function - Friend Function - Static Function-Assignment and Copy Initialization- Memory Management: new and delete Pointers to Objects, this Pointer- Streams - String I/O - Character I/O - Object I/O - I/O with Multiple Objects - File Pointers - Disk I/O with Member Functions- Error Handling in File I/O.

UNIT V

TEMPLATES AND EXCEPTION HANDLING

Templates: Introduction - Function Templates - Overloading Function Templates-, user defined template arguments(sona) - Class Templates - Exception Handling - Syntax, multiple exceptions, exceptions with arguments.

Total: 45 Hours

22OCS02 JAVA FUNDAMENTALS

3003

Course Objectives

- Implement applications based on core Java Concepts with examples
- Construct application using inheritance, packages and exception handling for real time problems.
- Integrate the Java I/O concepts to handle input and output operations.
- Develop programs to perform string manipulation in java.
- Design GUI with Java for event handling and database applications.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Demonstrate applications based on core Java Concepts with examples
- 2. Construct application using inheritance, packages and exception handling for real time problem
- 3. Explain the Java I/O concepts to handle input and output operations.
- 4. Develop programs to perform string manipulation in Java.
- 5. Design GUI with Java for event handling and database applications.

Articulation Matrix

UNIT I BASICS OF IAVA

The Genesis of Java - Overview of Java - Data Types, Variables, and Arrays - Operators – Control Statements - Introducing Classes - Methods and Classes.

UNIT II **INHERITANCE, PACKAGES AND EXCEPTIONS**

Inheritance: Basics - Using Super - Creating a Multilevel Hierarchy - Method overriding - Using Abstract Classes - Packages and Interfaces: Packages - Access Protection - Importing Packages-Interfaces Definitions and Implementations - Exception Handling: Types - Try and Catch - Throw.

UNIT III **EXPLORING JAVA I/O**

I/O Basics - Reading Console Input -Writing Console output - Native Methods - I/ O Classes and Interfaces - File - The Byte Streams - The Character Streams - Using Stream I/ O - Serialization.

UNIT IV

JAVA STRINGS

String Handling: Special String operations and Methods - String Buffer - Exploring java.lang: Simple type Wrappers - System - Math - Collections Framework: Collections Interfaces and Classes - Utility Classes: String Tokenizer - Date and Time.

UNIT V **GUI WITH JAVA**

Applet Basics - Applet Architecture - Applet Display Methods - Parameter Passing - Event Handling Mechanisms - Event Classes - Event Listener - Working with Windows, Graphics, Colors and Fonts - AWT Controls - Layout Managers and Menus - JDBC

22OCS03 KNOWLEDGE DISCOVERY IN DATABASES

Course Objectives

- Introduce the basic concepts of data warehousing.
- Impart knowledge about the data mining functionalities.
- Assess the strengths and weaknesses of association mining and cluster analysis.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Explain the concepts of Data Warehousing architecture and business analysis process.
- 2. Illustrate the process of Data Mining and preprocessing techniques for data cleansing.
- 3. Apply the association rules for mining the various kinds of data
- 4. Analyze Classification and Clustering algorithms for various problems with high dimensional data.
- 5. Illustrate the various data mining techniques on complex data objects

DATA WAREHOUSING AND BUSINESS ANALYSIS

Data warehousing Components -Building a Data warehouse -Data Warehouse and DBMS-Metadata-Multidimensional data model - Data Extraction, Cleanup and Transformation Tools -Reporting, Query tools and Applications - OLAP vs OLTP - OLAP operations - Data Warehouse Schemas: Stars, Snowflakes and Fact constellations.

UNIT II INTRODUCTION TO DATA MINING

Introduction - Steps in knowledge discovery from databases process - Architecture of a Typical Data Mining Systems - Data Mining Functionalities - Classification of Data Mining Systems - Data mining on different kinds of data - Different kinds of pattern - Task Primitives - Integration of a Data Mining System with a Data Warehouse - Major issues in Data mining.

UNIT III

ASSOCIATION RULE MINING

Market Basket Analysis- Frequent Item Set Mining methods: Apriori algorithm - Generating Association Rules - A Pattern Growth Approach- Pattern mining in multilevel and multidimensional space - Mining Various Kinds Of Association Rules - Association Analysis to Correlation Analysis - Constraint Based Association Mining.

UNIT IV

CLASSIFICATION AND CLUSTERING

Decision Tree Induction - Bayesian Classification - Rule Based Classification - Classification by Back propagation - Support Vector Machines - Clustering: Types of data - Partitioning methods: k-means, k- medoid - Hierarchical Methods: distance based agglomerative and divisible clustering, BIRCH – Density Based Method: DBSCAN - Grid Based Method: STING.

UNIT V

DATA MINING APPLICATIONS

Mining complex data objects - Text Mining - Graph mining - Web mining - Spatial Data mining - Application and trends in data mining - Social impacts of Data mining.

Total: 45 Hours

22OCS04 E LEARNING TECHNIQUES

3003

Course Objectives

- Understand the technologies involved in e-learning.
- Gain the fundamentals of e-learning techniques
- Determine the characteristics of Teaching-Learning Process

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Acquire knowledge about the basic concepts of e-learning.
- 2. Explain the technology mediated communication in e-learning
- 3. Exemplify of e-learning and content the process management.
- 4. Analyze the teaching and learning processes in e-learning environment.
- 5. Assess the various applications of e-learning.

Articulation Matrix

UNIT I INTRODUCTION

Evolution of Education - Generations of Distance Educational Technology - Role of E-Learning - Components of e-learning: CBT, WBT, Virtual Classroom - Barriers to e-Learning Roles and Responsibilities: Subject Matter Expert - Instructional Designer - Graphic Designer - Multimedia Author - Programmer - System Administrator - Web Master

UNIT II

TECHNOLOGIES

Satellite Broadcasting - Interactive Television - Call Centers - Whiteboard Environment - Teleconferencing: Audio Conferencing - Video Conferencing -Computer Conferencing. Internet: E-mail, Instant Messaging, Chat, Discussion Forums, Bulletin Boards, Voice Mail, File Sharing, Streaming Audio and Video.

310

9 Hours

9 Hours

UNIT IV

TEACHING-LEARNING PROCESS

Interactions: Teacher-Student - Student-Student - Student-Content - Teacher- Content - Teacher-Teacher - Content-Content Role of Teachers in E-Learning - Blended Learning -Cooperative Learning - Collaborative Learning - Multi Channel learning - Virtual University - Virtual Library.

Content: E-Content, Dynamic Content, Trends - Technology: Authoring, Delivery, Collaboration -Services: Expert Service, Information Search Service, Knowledge Creation Service - Learning Objects and E-Learning Standards. Process of E-Learning: Knowledge acquisition and creation,

Sharing of knowledge, Utilization of knowledge - Knowledge Management in E-Learning.

UNIT V

APPLICATIONS

Customer service training - Sales training - Customer training - Safety training - IT training -Product training - Healthcare training.

9 Hours

22OCS05 SOCIAL TEXT AND MEDIA ANALYTICS 3003

Course Objectives

- Understand the basic ideas of Text mining.
- Analyze the methods and approaches used in analytics.
- Gain knowledge on various types of analytics like web, social network, and social media

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Demonstrate the concepts and applications of text mining
- 2. Explain Content analysis and Sentiment analysis
- 3. Illustrate web analytics with a suitable model
- 4. Illustrate social network analytics with suitable example.
- 5. Illustrate social media analytics with suitable example.

Articulation Matrix

UNIT I TEXT MINING

7 Hours

Introduction, Core text mining operations, Preprocessing techniques, Categorization, Clustering, Information extraction, Probabilistic models for information extraction, Text mining applications.

B.E. - MECH | Minimum Credits to be earned: 164 | Regulations 2022

UNIT II

METHODS

Content Analysis-Natural Language Processing-Clustering & Topic Detection-Simple Predictive Modeling-Sentiment Analysis; Sentiment Prediction.

UNIT III WEB ANALYTICS

Web analytics tools-Clickstream analysis-A/B testing, online surveys-Web search and retrieval-Search engine optimization-Web crawling and Indexing-Ranking algorithms-Web traffic models.

UNIT IV

SOCIAL NETWORK ANALYTICS

Social contexts: Affiliation and identity - Social network analysis - Social network and web data and methods. Graphs and Matrices - Basic measures for individuals and networks

UNIT V

SOCIAL MEDIA ANALYTICS

Information visualization - Making connections: Link analysis - Random graphs and network evolution.

Total: 45 Hours

22OEC01 BASICS OF ANALOG AND DIGITAL ELECTRONICS

Course Objectives

- Understand the working of diodes and transistors in electronic circuits.
- Understand the analog operational amplifier and its applications.
- Understand the implementation of combinational and sequential circuits in digital systems.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Apply the diodes and transistors in regulators and amplifiers and analyze their characteristics.
- 2. Analyze the working of analog ICs with different configurations and their applications.
- 3. Apply the simplification of Boolean expressions using K-map to implement combinational circuits.
- 4. Analyze the operation of flip-flops and memory configurations in digital circuits.
- 5. Evaluate and classify A/D and D/A converters with respect to their parameters.

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

5	-	-	3	-	2	-	-	-	-	-	-	-	-	-	2

Articulation Matrix

UNIT I

SEMICONDUCTORS DEVICES

Conductor, Semiconductors & Insulators, Semiconductors: intrinsic & extrinsic, energy band diagram - Mobility - Electrons and holes - The P-N junction diode - Zener diode - Avalanche effect- Rectifier Circuits Half wave, Full wave circuits, Efficiency, PIV, Ripple factor and AC and DC current and voltage in rectifier. PNP and NPN Bipolar junction Transistors - H parameters equivalent circuit - Common emitter amplifier - DC behavior: the load slope and the Q point - AC behavior - Emitter follower amplifier - Field effect transistors: JFET and MOSFET.

UNIT II **OPERATIONAL AMPLIFIERS: DC PERFORMANCE**

The operational amplifier - Input resistance, Output resistance, Open loop gain - Bias currents - Offset currents - Offset voltage - Differential mode gain - Common mode gain - Common mode rejection ratio - Negative feedback - Open loop gain and closed loop gain - Inverter amplifier - Non-inverter amplifier - The voltage follower - Transimpedance amplifier (Current to voltage converter) -Differential amplifier. Adders, Subtractors, Comparator, Integrator and Differentiator.

UNIT III

DIGITAL TECHNIQUES: COMBINATIONAL CIRCUITS

Numbering systems - Binary, octal and hexadecimal numbers - Boole algebra - Conversion and operations - AND gate- OR gate - Inverter - NAND gate - NOR gate - Exclusive OR gate. Morgans laws. Combinational Circuits: Truth tables, logic expressions, Logic simplification using K- map, half and full adder/subtractor, multiplexers, demultiplexers, Logic families :TTL and CMOS.

UNIT IV

DIGITAL TECHNIQUES: SEQUENTIAL CIRCUITS

Gated Latches & Flip Flops- Level triggered and Edge triggered Flip-Flops, Flop (FF) types: RS type. JK FF. JK FF Master slave. D FF. T FF. Flip Flop Conversion. Shift registers, Counters. Memories Structure: address and data bus. ROM, PROM, EPROM and flash RAM. Volatiles Memories: RAM, SRAM, DRAM. Addressing modes.

UNIT V

DIGITAL TO ANALOG CONVERTERS AND ANALOG TO DIGITAL CONVERTERS

DIGITAL TO ANALOG CONVERTERS : Input latch. Binary Weighted Resistor Network. R-2R Ladder Resistor Network. Pulse Width Modulation . Resolution. Accuracy. Linearity. Zero Offset. Settling Time. Glitches. ANALOG TO DIGITAL CONVERTERS: Sampling. Real time sampling and equivalent time sampling. Sampling frequency. Sampling theorem (Nyquist). Anti-aliasing filtering. Sampling and holding. Conversion.

22OEC02 MICROCONTROLLER PROGRAMMING

Course Objectives

- To understand the series of microcontrollers in terms of architecture, Programming and Interfacing.
- To impart knowledge on the development of assembly language programs.
- To study the programming of PIC series of microcontrollers and learn building of hardware circuits using PIC 16F series of Microcontrollers.
- To impart knowledge on the interfacing techniques of various PIC hardware.
- To learn the emerging trends in the design of advanced Microcontrollers.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Utilize the components and functionalities of 8051 Microcontrollers.
- 2. Develop microprocessor applications using the Assembly Language Program
- 3. Examine the working nature of PIC microcontroller on various versions
- 4. Apply the interfacing of different peripherals using PIC Microcontroller
- 5. Analyze the architecture and instruction set of ARM Microcontroller

UNIT I

8-BIT MICROCONTROLLER

Introduction-Intel 8051 architecture-Counters and Timers-Serial Interface- Interrupts- Interfacing to external memory and 8255- Instruction set- Address modes.

9 Hours

3003

UNIT II

8051 ALP AND APPLICATIONS

Assembly language program- Timers and Counters programming- DAC- ADC- Sensor- Keyboard and LCD.

UNIT III

PIC MICROCONTROLLER

PIC Microcontroller features- PIC Architecture, Program Memory, Addressing Modes, Instruction Set, Instruction Format- Byte-oriented Instructions- Bit-oriented Instructions- Literal Instructions- Control Instructions (CALL & GOTO)- Destination Designator. MPLAB overview: Using MPLAB, Toolbars, Select Development Mode and Device type, Project, Text Editor, Assembler, MPLAB operations.

UNIT IV

PIC HARDWARE

Reset, Clock, Control registers, Register banks, Program Memory Paging, Ports, Interrupts, Timer and Counter, Watchdog Timer, Power up timer, Sleep mode, I2C bus- A/D converter.

UNIT V

HIGH PERFORMANCE RISC ARCHITECTURE

ARM: The ARM architecture- ARM organization and implementation- The ARM instruction set- The THUMB instruction set- Basic ARM Assembly Language Program- ARM CPU Cores.

FOR FURTHER READING

Introduction- Architecture- Registers- Memory- Instruction set- Addressing Modes- I/O Pins- Timers-Counters- Interrupts.

22OEC03 PRINCIPLES OF COMMUNICATION SYSTEMS

Course Objectives

- To study the various analog and digital modulation techniques
- To study the various digital communication techniques
- To enumerate the idea of spread spectrum modulation
- To study the design concepts of satellite and optical communication

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Illustrate the process involved in Amplitude, Frequency and phase modulation systems.
- 2. Analyze the performance of different digital modulation /demodulation techniques.
- 3. Analyze Pulse Code Modulation scheme for the transmission of analog data in digital format.
- 4. Apply the concepts of spread spectrum modulation techniques to eradicate interference in wireless communication.
- 5. Analyze the system design of satellite and optical communication.

UNIT I

9 Hours

3003

FUNDAMENTALS OF ANALOG COMMUNICATION

Principles of amplitude modulation, AM envelope, frequency spectrum and bandwidth, modulation index and percent modulation, AM Voltage distribution, AM power distribution, Angle modulation. FM andPM waveforms, phase deviation and modulation index, frequency deviation and percent modulation,Frequency analysis of angle modulated waves. Bandwidth requirements for Angle modulated waves

UNIT II

DIGITAL COMMUNICATION

Introduction, Shannon limit for information capacity, Amplitude Shift Keying (ASK), Frequency Shift Keying (FSK) Minimum Shift Keying (MSK), Phase Shift Keying (PSK), BPSK, QPSK, 8 PSK Quadrature Amplitude Modulation (QAM), Bandwidth Efficiency, Comparison of various Digital Communication System (ASK - FSK - PSK - QAM).

UNIT III

DIGITAL TRANSMISSION

Introduction, Pulse modulation, PCM, PCM sampling, sampling rate, signal to quantization noise rate, companding, delta modulation, adaptive delta modulation, differential pulse code modulation, pulse transmission, Intersymbol interference, eye patterns.

UNIT IV

SPREAD SPECTRUM AND MULTIPLE ACCESS TECHNIQUES

Introduction, Pseudo-noise sequence, DS spread spectrum with coherent binary PSK, processing gain, FH spread spectrum, multiple access techniques, wireless communication, TDMA and CDMA in wireless communication systems, source coding of speech for wireless communications.

UNIT V

SATELLITE AND OPTICALCOMMUNICATION

Satellite Communication Systems-Keplers Law, LEO and GEO Orbits, footprint, Link model-OpticalCommunication Systems-Elements of Optical Fiber Transmission link, Types, Losses, Sources and Detectors.

22OEC04 PRINCIPLES OF COMPUTER COMMUNICATION AND NETWORKS

3003

Course Objectives

- To understand the concept of data communication and networking models.
- To study the various networking Components and Networks.
- To explore the routing, addressing and security and management aspects of computer networks.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Classify the types of computer networks and analyze the seven layers of OSI model.
- 2. Analyze the basic operations of Routing Algorithms and Routing devices
- 3. Analyze the local and wide area networking technologies.
- 4. Apply the ISDN and ATM interface connections in broadband networks.
- 5. Analyze the security and management techniques related with networks.

UNIT I

NETWORK FUNDAMENTALS

Types of Computer Networks: by Area, by Topology ; Communication Services: Serial and Parallel, Synchronous and Asynchrounous, Simplex and Duplex, Analog and Digital; Speed and Capacity; Multiplexing and Switching; Network Architecture: OSI Seven-Layer Network model.

UNIT II

INTERNETWORKING AND COMPONENTS

Routing Concepts: Routing Algorithms, RIP, RIP-2, OSPF and other routing Protocols; Switches and Hubs: Store and Forward Switch, Cut-Through Switch, Hybrid Switch, Performance of Switches; Repeaters; Repeater Vs Hubs; Bridges: Standards, Bridges Vs Repeaters; Routers and Gateways.

UNIT III

LOCAL AND WIDE AREA NETWORKING TECHNOLOGIES

LAN Components and Topologies; Access Techniques; Transmission Protocols and Media; Ethernet and IEEE 802.3 Networks: History, 10-MBPS Ethernet, Switched Ethernet, 100-MBPS Ethernet, Gigabit Ethernet.

UNIT IV

BROADBAND NETWORKS

ISDN: Evolution, ISDN Channel and Interface Structures; Broadband ISDN: Basics, Principles and General Architecture; Asynchronous Transfer Mode(ATM): Introduction, Concepts, Components, Connection Supported by ATM network and Concept of Virtual Channel and Virtual Path, Traffic control and Congestion Control, Operation and Maintenance aspects.

UNIT V

NETWORK SECURITY AND MANAGEMENT

Security: Need of Security, Security Threats, Vulnerabilities, Methods, tools and Techniques for Attacks; Network Security: Levels of Security, Cryptosystems; Data Encryption Standard (DES), Public Key Cryptography, Firewalls; Network Management: Functions and Elements, Distribution of Management; Simple Network Management Protocol (SNMP), Remote Network Management Services.

22OEI03 FUNDAMENTALS OF VIRTUAL INSTRUMENTATION 3003

Course Objectives

- Understand the basic components of Virtual Instrumentation system.
- Learn the developing VIs based on Lab VIEW software.
- To learn to develop applications based on Virtual Instrumentation system.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Outline the concepts of traditional instruments and virtual instruments
- 2. Conclude the overview of modular programming and the structuring concepts in VI programming
- 3. Attribute the procedure to install DAQ in various OS and its interfacing methods
- 4. Implement the VI toolsets for specific applications
- 5. Generate the applications using Virtual Instrumentation software

323

UNIT I

INTRODUCTION

Virtual Instrumentation: Historical perspective - advantages - block diagram and architecture of a virtual instrument - Conventional Instruments versus Traditional Instruments - data-flow techniques, graphical programming in data flow, comparison with conventional programming.

UNIT II

VI PROGRAMMING TECHNIQUES

VIs and sub-VIs, loops and charts, arrays, clusters and graphs, case and sequence structures, formula nodes, local and global variables, State machine, string and file I/O, Instrument Drivers, Publishing measurement data in the web.

UNIT III

DATA ACOUISITION

Introduction to data acquisition on PC, Sampling fundamentals, Input/output techniques and buses. Latest ADCs, DACs, Digital I/O, counters and timers, DMA, Software and hardware installation, Calibration, Resolution, Data acquisition interface requirements - Issues involved in selection of Data acquisition cards - Data acquisition cards with serial communication - VI Chassis requirements. SCSI, PCI, PXI system controllers, Ethernet control of PXI. Networking basics for office & Industrial applications, VISA and IVI.

UNIT IV

VI TOOLSETS

Use of Analysis tools, Fourier transforms, power spectrum, correlation methods, windowing and filtering. Application of VI in process control designing of equipments like oscilloscope, Digital multimeter, Design of digital Voltmeters with transducer input Virtual Laboratory, Web based Laboratory.

UNIT V

APPLICATIONS

Distributed I/O modules- Application of Virtual Instrumentation: Instrument Control, Development of process database management system, Simulation of systems using VI, Development of Control system, Industrial Communication, Image acquisition and processing, Motion control. Development of Virtual Instrument using GUI, Real-time systems, Embedded Controller, OPC, HMI / SCADA software, Active X programming.

22OEI04 OPTOELECTRONICS AND LASER INSTRUMENTATION 3003

Course Objectives

- To enhance the student knowledge in fiber optics fundamentals and fabrication
- To be recognized with industrial applications of fibers
- To understand the fundamental concepts about lasers
- To identify and describe various fiber optic imaging and optoelectronic sensor applications

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Course Outcomes (COs)

- 1. Attribute the properties of optical fibers, their light sources and detectors.
- 2. Implement the fiber-optic sensor for the measurement of various physical quantities.
- 3. Conclude the fundamentals of laser, types of laser and its working.
- 4. Outline the applications of laser for industrial applications.
- 5. Differentiate the use of laser instruments for various medical applications.

Articulation Matrix

5	3	2	2	2	-	-	-	-	-	-	-	-	-	-	2

UNIT I

OPTICAL FIBERS AND THEIR PROPERTIES

Introduction to optical fibers - Light guidance - Numerical aperture - Dispersion - Different types of fibers and their properties - Light Sources for fiber optics, Photo detectors, source coupling, splicing and connectors.

UNIT II

INDUSTRIAL APPLICATION OF OPTICAL FIBERS

Fiber optics instrumentation system - optical fiber sensors, Measurement of pressure, temperature, current, voltage and liquid level - fiber optic communication set up - different types of modulators - detectors.

9 Hours

UNIT III

LASER FUNDAMENTALS

Fundamental characteristics of lasers: laser rate equation - three level system - four level system - properties of laser beams - laser modes - resonator configuration - Q- switching and mode locking - cavity dumping - types of lasers: gas lasers, solid state lasers, liquid lasers and semiconductor lasers.

UNIT IV

INDUSTRIAL APPLICATION OF LASERS

Lasers for measurement of distance and length, velocity, acceleration, atmospheric effects, sonic boom, pollutants - material processing: laser heating, melting, welding and trimming of materials - removal and vaporization - calculation of power requirements of laser for material processing.

UNIT V

Reference(s)

HOLOGRAM AND MEDICAL APPLICATIONS

Holography: basic principle, methods - holographic interferometry and application, holography for non-destructive - medical applications of lasers, laser and tissue interactive - laser instruments for surgery, removal of tumors of vocal cards, brain surgery, plastic surgery, gynaecology and oncology.

22OBT01 BIOFUELS

3003

Course Objectives

- To understand and explore the scope of biofuels the most efficient renewable source of energy.
- To develop the expertise in the technology pertaining to their generation and employment in order to surrogate the existing conventional fuels and hence strives towards sustainable development
- To give way to the bolster green technology and incline towards more ecofriendly options.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Apply thee bio resources that can be used for the production of biofuels.
- 2. Analyze the physical and chemical properties of the biodiesel.
- 3. Analyze the mechanisms of improvising the quality and performance of engines using biofuels
- 4. Analyze the bio-fuel conversion technologies and their environmental attributes
- 5. Evaluate the designing aspects of major unit processes/operations of an integrated bio- refinery

Articulation Matrix

UNIT I

CLASSIFICATION AND RESOURCES

hydrolysis, Food vs energy.

UNIT II

BIODIESEL

Definition, basics and chemistry of biodiesel, vegetable oils in biodiesel production, Trans esterification: Chemical methods, enzymatic methods and types of catalysts, separation and purification, physical properties and characterization of biodiesel - Cloud point, pour point, cold filter plugging point, flash point, viscosity and cetane number.

Introduction, biofuel as a renewable energy, classification of biofuels - First, second, third and fourth generation biofuels, different plant sources as biofuel feed stocks, Biogases, physical and chemical characteristics of vegetable oils - iodine number, hydroxyl, acid values, rancidity, hydrogenolysis and

UNIT III

QUALITY BIODIESEL AND ENVIRONMENT

Producing Quality Biodiesel, quality control, test methods, ASTM specifications. Oxidative and thermal stability, estimation of mono, di, triglycerides and free glycerol, engine performance test, blending of ethanol with biodiesel, blending of biodiesel with high speed diesel (HSD) and their combustion properties.

UNIT IV

BIOETHANOL AND BIOGASES

Ethanol as a fuel, microbial and enzymatic production of ethanol from biomass - lignocellulose, sugarcane, sugar beet, corn, wheat starch, purification - wet and dry milling processes, saccharification-chemical and enzymatic. Production of bio methane and bio hydrogen.

UNIT V

BIOREFINERIES

Definition and types of biorefineries, co-products of biorefineries-oil cake and glycerol, purification of glycerol obtained in biodiesel plant; anaerobic and thermal gasification of biomass, economics of biorefineries.

22OFD01 TRADITIONAL FOODS

3003

Course Objectives

- Understand the importance of traditional foods and food habits
- Know the traditional processing of snack, sweet and dairy food products
- Infer the wide diversity and common features of traditional Indian foods and meal patterns.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

Course Outcomes (COs)

- 1. Assess the processing methods of traditional foods in terms of its health benefits
- 2. Assess the production methods of traditional sweets, snacks and dairy products
- 3. Select the Traditional fermented foods products based on its raw material
- 4. Find a large scale production of tradition foods for its increased consumption
- 5. Compare the health aspects of traditional foods with modern foods

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

4	-	-	-	-	-	-	-	2	-	-	-	-	-	-
5	-	-	-	-	-	-	-	2	-	-	-	-	-	-

UNIT I

TRADITIONAL METHODS OF FOOD PROCESSING

Introduction - food culture -geographical features and food. Traditional methods of milling grains - rice, wheat and corn - equipment and processes as compared to modern methods. Equipment and processes for edible oil extraction- comparison of traditional and modern methods. Energy costs, efficiency, yield, shelf life and nutrient content comparisons. Traditional methods of food preservation - sun-drying, osmotic drying, brining, pickling and smoking.

UNIT II

TRADITIONAL SWEETS, SNACKS AND DAIRY PRODUCTS

Production, formulation, preparation and processing of Indian traditional sweet and snack food products:-Rasgolla, Gulab jamun; formulation and preparation of namkeen, potato chips, banana chips. Acid coagulated and fermented dairy products- paneer, dahi, shrikhand, lassi - processing conditions, defects etc. Fat rich products- Butter, ghee and its processing.

9 Hours

UNIT III

TRADITIONAL FERMENTED FOOD PRODUCTS

Idli, Soya sauce, fish pickle, dry fish, meat and vegetable fermented products. Various alcohol based products. Ways to increase nutritional quality of food such as enrichment, fortification, fermentation and mutual supplementation. Best cooking and processing methods to retain nutrients

UNIT IV

COMMERCIAL PRODUCTION OF TRADITIONAL FOODS

Commercial production of traditional breads, snacks, ready-to-eat foods and instant mixes, frozen foods -types marketed, turnover; role of SHGs, SMES industries, national and multinational companies; commercial production and packaging of traditional beverages such as tender coconut water, neera, lassi, buttermilk, dahi. Commercial production of intermediate foods - ginger and garlic pastes, tamarind pastes, masalas (spice mixes), idli and dosa batters

UNIT V

Reference(s)

HEALTH ASPECTS OF TRADIONAL FOODS

Comparison of traditional foods with typical fast foods / junk foods - cost, food safety, nutrient composition, bioactive components; energy and environmental costs of traditional foods; traditional foods used for specific ailments /illnesses.

22OFD02 FOOD LAWS AND REGULATIONS

Course Objectives

- Introduce the concept of food hygiene, importance of safe food and laws governing it
- Learn common causes of food borne illness viz. physical, chemical and biological and identification through food analysis
- Understand food inspection procedures employed in maintaining food quality

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. PO7. Understand the impact of the professional engineering solutions in societal and environmental

contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

Course Outcomes (COs)

- 1. Analyse the food safety strategies and nutritional quality of the food
- 2. Assess the food regulatory mechanism and mandatory laws for food products
- 3. Determine the national and international regulatory agencies
- 4. Apply the voluntary regulatory standards as per application
- 5. Assess the implementation of food safety for a food processing industry

Articulation Matrix

3003

UNIT I

INTRODUCTION

Introduction, concept of food safety and standards, food safety strategies. Food hazards and contaminations - biological (bacteria, viruses and parasites), chemical (toxic constituents / hazardous materials) pesticides residues / environmental pollution / chemicals) and physical hazards. Preventive food safety systems - monitoring of safety, wholesomeness and nutritional quality of food. Prevention and control of physical, chemical and microbiological hazards. Principles of food safety -Establishment: design and facilities - emergency preparedness - Maintenance cleaning and sanitation personal hygiene - packaging and labelling - transportation - traceability - recall procedure - visitor policy. Adulteration: Intentional and unintentional - Preservatives - antioxidants, sweeteners, flavours, colours, vitamins, stabilizers - indirect additives - organic resides - inorganic residues and contaminants.

UNIT II

FOOD LAWS

Indian and Food Regulatory Regime (Existing and new), PFA Act and Rules, Food Safety and Quality Requirements, Additives, Contaminants and Pesticide Residue. Food Safety and Standards Act, 2006, FSSAI roles and responsibilities, Essential Commodities Act, 1955, Global Scenario, Codex Alimentarius, WHO/FAO Expert Bodies (JECFA/ JEMRA/JMPR) WHO/FAO Expert Bodies (JECFA/ JEMRA/JMPR). Food safety inspection services (FSIS) and their utilization.

UNIT III

REGULATIONS

Introduction to OIE & IPPC, Other International Food Standards (e.g. European Commission, USFDA etc). WTO: Introduction to WTO Agreements: SPS and TBT Agreement, Export & Import Laws and Regulations, Export (Quality Control and Inspection) Act, 1963. Role of Agricultural and Processed Food Products Export Development Authority (APEDA), Customs Act and Import Control Regulations, Other Voluntary and mandatory product specific regulations, Other Voluntary National Food Standards: BIS Other product specific standards; AGMARK. Nutritional Labelling, Health claims.

UNIT IV

STANDARDS

Voluntary Quality Standards and Certification GMP, GHP, HACCP, GAP, Good Animal Husbandry Practices, Good Aquaculture Practices ISO 9000, ISO 22000, ISO 14000, ISO 17025, PAS 22000, FSSC 22000, BRC, BRCIOP, IFS, SQF 1000, SQF 2000. Role of NABL, CFLS.

UNIT V

IMPLEMENTATION AND RISK ASSESSMENT

Implementation of food safety for a desired food processing industry. Risk assessment studies: Risk management, risk characterization and communication.

22OFD03 POST HARVEST TECHNOLOGY OF 3003 FRUITS AND VEGETABLES 3003

Course Objectives

- To understand the importance and different methods of post harvest handling and storage of fruits and vegetables.
- To gain knowledge on different preservation methods of fruits and vegetables
- To familiarize with the value added products from fruits and vegetables

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Course Outcomes (COs)

- 1. Implement various post-harvest handling practices to effectively store fruits and vegetables, ensuring quality preservation.
- 2. Analyze suitable preservation methods (such as sugar, salt, or dehydration) to produce valueadded products from fruits and vegetables.
- 3. Evaluate the need for low temperature and irradiation methods to preserve specific fruits and vegetables, assessing their effectiveness.
- 4. Apply concentration and fermentation techniques to preserve fruits and vegetables, enhancing their shelf life and quality.
- 5. Implement the canning process for preserving fruits and vegetables, ensuring product safety and quality.

5	2	1	1	-	-	-	-	-	-	-	-	-	-	-

Articulation Matrix

UNIT I

9 Hours

POST-HARVEST PRACTICES AND PROCESSING

Maturity indices for harvesting; pathological spoilage's during storage, ripening and control measures, Post-harvest handling, sorting & grading, packaging, storage, transportation, Methods of pre-cooling, post-harvest treatments to hasten and delay ripening; Methods of storage at farm level - cold storage,

controlled/modified atmosphere storage, Quality management, export requirements, Nutritive value, nutraceutical properties

UNIT II

PRESERVATION AND VALUE ADDITION

General principles and methods of fruit and vegetable preservation. Preservation using sugar: Principle and Preparation of jam, jelly, marmalade, squash, RTS, carbonated beverages, crush, nectar, cordial, fruit bar, preserves, candies and carbonated fruit beverages. Processing using salt: Principle - Brining - Preparation of pickles, chutney and sauces, ketchup.

UNIT III

PRESERVATION BY LOW TEMPERATURE AND IRRADIATION

Preservation by low temperature: definition, principle, methods - Refrigeration, freezing. Methods of freezing- changes during freezing. Preparation of frozen foods. Minimal Processing of Fruits and Vegetables - techniques involved - Preservation by irradiation: definition- principle, application, irradiation unit.

UNIT IV

PRESERVATION BY DRYING

Machineries involved in processing of fruits and vegetables products. Drying and dehydration: definition, principle, Types of driers: Solar, cabinet, spray drier, drum drier, fluidized bed drier. Preparation of product for dehydration. Dehydration principles and equipment. Preparation of fruits - powder production. Problems related to storage of dehydrated products.

UNIT V

Reference(s)

PRESERVATION BY CANNING

Canning: principles, Types of cans, packing of canned products-preparation of canned products - general considerations in establishing a commercial fruit and vegetable cannery, machineries involved in canning and bottling unit- spoilage of canned foods. Bottling of fruit and vegetable. Precautions in canning operations.

22OFD04 CEREAL, PULSES AND OILSEED TECHNOLOGY

Course Objectives

- Understand the application of scientific principles in the processing technologies specific to • the materials
- Understand the storage methods and handling techniques followed for cereals, pulses and oil seeds
- Develop the knowledge in the area of Cereals, pulses and oil seed processing and technology •

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools

to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Identify the processing technologies used for cereals.
- 2. Analyze the composition and nutritional value of millets.
- 3. Understand the changes in pulses and legumes during processing.
- 4. Develop skills in oilseed processing technology.
- 5. Understand the relationship between storage, processing, and quality of food grains.

Articulation Matrix

UNIT I

CEREALS

Cereal Grains- Basic agricultural aspects, structure and composition; Storage, Insect control; Processing: Wheat- milling, (Atta and maida), quality aspects of flour, wheat proteins and their function, rheology of flour; wheat based baked products - Bread, Biscuit, Cakes, Extruded products, Pizza, Chapatis, malting and malt products; Rice-Milling, Parboiling, Quick cooking rice, Traditional Indian Products- Puffed Rice, flaked rice, Idli/Dosa/vada mixes and other savouries; Corn- Wet and dry milling, Corn Products - Corn flakes, Corn starch, canned corn products, puffed product; Oats-Milling, Oat Products - Steel cut, rolled oats, quick cooking; Traditional and Fermented cereal products.

334

UNIT II

OTHER CEREALS AND MILLETS

Sorghum, Pearl Millet, Finger millet, Foxtail Kodo Millet - Basic agricultural millet, aspects, structure and composition; storage, insect control; processing - pearling, Milling, Malting, Malt based foods, flaked and fermented products; Traditional and Nutritional products based on finger millet.

UNIT III

PULSES AND LEGUMES

Basic agricultural aspects, structure, composition, storage, insect control, processing Milling/splitting, dhal milling, products - puffed, flakes, flour, legume-based traditional products, flour based Indian sweets and savouries, soya milk, soy protein Isolate, soya paneer

UNIT IV

OIL SEEDS AND NUTS

Basic agricultural aspects structure, composition, Storage, Insect control; processing: traditional and modern methods of oil extraction, refining, bleaching, deodorizing, hydrogenation; oil blends; applications of different oils and fats in food processing & products.

UNIT V

STORAGE AND HANDLING

Bag Storage - Advantages and Disadvantages, Cover Plinth Storage Structures, CAP storage (Cover and Plinth Storage). Protection against Rodents, Fungi, Pests and Mites. Fungation Processes for bag storage piles. Bulk Storage in silos and large Bins. Conveyors and Elevators for feeding and discharging.

22OFT01 FASHION CRAFTSMANSHIP

3003

Course Objectives

- To impart theoretical and practical knowledge about various handi-craft techniques
- To enhance innovative skills on hand crafts.
- To build confidence on doing handicrafts.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Outline the classification, techniques and criteria for selecting raw materials for making various handicraft materials and produce textile based handicrafts. Produce various decorative and appealing products
- 2. Design and construct various wall hangings and fashion accessories.
- 3. Design and construct toys and accessories
- 4. Design and construct head accessories, home furnishings and paintings
- 5. Design and construct various decorative and appealing products for interiors

Articulation Matrix

UNIT I

TECHNIQUES OF HANDICRAFT MATERIALS

Definition of Handicraft, Classification: Reusable, Non reusable, Raw materials used in various craft materials: printed, embroidered, stitched and handmade, Criteria for selection of raw materials: material types and end uses.

UNIT II

DECORATIVE AND APPEALING PRODUCTS - INTERIORS

Designing and Construction procedures for following various decorative and appealing products: Wall hangings - String Art on plywood, Pressed Flower Art frames.

UNIT III

DECORATIVE AND APPEALING PRODUCTS - ACCESSORIES

Designing and Construction procedures for following various decorative and appealing products: Handbags, Hats, footwear.

UNIT IV

DECORATIVE AND APPEALING PRODUCTS - ORNAMENTS

Designing and Construction procedures for following various decorative and appealing products: Stone necklace using Macrame Technique, Tribal Jewellery using woollen threads, Floral Jewellery using Resin Technique, Fabric Jewellery using Tie and Dye Technique.

UNIT V

DECORATIVE AND APPEALING PRODUCTS - FANCY ITEMS

Designing and Construction procedures for following various decorative and appealing products: Jewellery Box, Utility Holder, Gift items. Lampshade decors from cardboard, Driftwood Frames for pictures and Mirrors.

22OFT02 INTERIOR DESIGN IN FASHION

3003

Course Objectives

- To impart knowledge on interior design.
- To improve the design skills, sustainable with socially-conscious designs

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

Course Outcomes (COs)

- 1. Assess the elements of interior design concepts and resolve the personality requirements
- 2. Carry out graphical representations of interior design concepts
- 3. Resolve the space planning requirements of residential home as per CPWD guidelines
- 4. Determine the aesthetic requirements of interior design components.
- 5. Analyze the roles and responsibilities of an interior designer.

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

Articulation Matrix

UNIT I

INTRODUCTION

9 Hours

Interior designing - definition, importance, requirements and types - Structural design, Decorative Design -Designing interiors, Good taste; Design themes, types and application. Personality of the Home - Art elements - Line: types, characteristics and importance; form: size and shape, characteristics; Colour - sources, qualities, emotional effects, colour wheel and schemes.

UNIT II

GRAPHICAL PRESENTATIONS

3D composition; Isometric and Axonometric- Still life- Furniture Sketching- Object Drawing with color rendering - Interior elements, Lighting, plants. Perspective, Axonometric Isometric drawing. Orthographic Projection - Lifts and escalators.

UNIT III

SPACE PLANNING

Space planning concepts- interiors, circulation. Definition, application of ergonomic principals in interiors. Residential house space planning case study- CPWD guidelines. Lighting for different locations and activities, measurement, ventilation and indoor air quality, noise control methods.

UNIT IV

INTERIOR COMPONENTS

Application of colour in interiors; Texture - types and significance; Pattern: types and effects; Light - importance. Importance of Furniture Design for Interiors- Ancient Age / Middle Age / Contemporary. Doors, Windows, Staircase designs, False Ceiling, Partitions, Wall Panelling, Comics, Mosaic, Cladding- Flooring and Wall Cladding

UNIT V

ROLES AND RESPONSIBILITIES OF INTERIOR DESIGNER

Role of an Interior Designer- Responsibility towards society and need of an Interior Designer to better the environment- Ethics and Code of Conduct- Responsibility towards client, contractor and supplier, Estimation. Professional Fees- Work of an Interior Designer- Making of portfolio, JD Annual Design Awards.

220FT03 SURFACE ORNAMENTATION

3003

Course Objectives

- To familiarize the students about the various techniques of surface embellishment with relevance to garment embellishments.
- To aware of various types of embroidery and methods of producing it.
- To make the students confident about doing surface embellishment work

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Analyze the raw material requirements for surface ornamentation and its application
- 2. Implement hand embroidery stitches on fabric and show the stitch development procedure in diagrammatic representations
- 3. Apply the machine and computerized embroidery stitches
- 4. Analyze the surface embellishment techniques and its application
- 5. Assess the quality maintenance parameters of all embroidered products and analyze the 6 traditional embroidery techniques

UNIT I

9 Hours

INTRODUCTION TO SURFACE ORNAMENTATION

Introduction, Definition, Need, Types, Raw materials, Importance of surface ornamentation, Selection of needle, thread and fabric for hand embroidery and machine embroidery. various methods of surface embellishment- embroidery and surface ornamentation.

development, software used in embroidery machines, process of designing, method and types of stitch application, punching and digitizing.

UNIT IV EMBELLISHMENT TECHNIQUES

Materials used and Applications. Types of embellishment techniques- fabric painting-hand, Stencildabbing and Spraying. Dyeing and printing-advanced tie and dye techniques, batik and block printing. Trimmings and decorations-Laces, Pompons, Fringes, Tassels, Tucks, Show buttons, Crocheting.

General rules for hand embroidery. Types of hand embroidery stitches-Running, Couching, Button hole, Satin, Long & Short, Wheat, Chain, Stem, Herringbone, Cross stitch, Knotted stitches, Fish

General rules for machine embroidery. Types of frames and methods of transferring the designs. Attachments to sewing machines for embroidery, Types of machine embroidery stitches- Eyelet work, Cut work, patch work, Mirror work, Applique, Shaded embroidery, Shadow work, Bead and Sequins work, Vermicelli, Zigzag, Granite stitch. Computerized embroidery machine- Concept of design and

bone, Fly stitch, Braids, Back, Hem, Seed, Needle weaving, Whip stitches.

UNIT V

UNIT II

UNIT III

HAND EMBROIDERY

MACHINE EMBROIDERY

TRADITIONAL EMBROIDERIES OF INDIA AND CARE

Care and maintenance of embroidered articles-care and maintenance methods for embroidered apparel, pressing. Traditional Embroideries of India-Phulkari, Kasuti, Kashmiri embroidery, Kutch work, Chikkankari, Kantha.

22OPH01 NANOMATERIALS SCIENCE

3003

Course Objectives

- Impart knowledge on Nanoscience
- Explore different techniques of producing nanomaterials
- Create expertise on the applications of nanomaterials in various fields

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change

Course Outcomes (COs)

- 1. Analyze the origin of nanomaterials from ancient applications to modern nanotechnology
- 2. Compare the different types of methods adopted for synthesizing nanomaterials
- 3. Analyze the characterization techniques for analyzing nanomaterials
- 4. Analyze the magnetic properties of nanomaterials and their applications in data storage and spintronics
- 5. Organize the nanomaterials developed for advanced technological applications

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

UNIT I

9 Hours

NANO SCALE MATERIALS

Introduction-Feynman's vision-national nanotechnology initiative (NNI) - past, present, future - classification of nanostructures, nanoscale architecture - effects of the nanometer length scale - changes to the system total energy, and the system structures- effect of nanoscale dimensions on various properties -differences between bulk and nanomaterials and their physical properties.

UNIT II

NANOMATERIALS SYNTHESIS METHODS

Top down processes - mechanical milling, nanolithography and types based on radiations - Bottom up process physical method: physical vapour deposition, RF sputtering, CVD- chemical method: colloidal and sol-gel methods - template based growth of nanomaterials - ordering of nanosystems, self-assembly and self-organization.

UNIT III

CHARACTERIZATION TECHNIQUES

General classification of characterization methods - analytical and imaging techniques - microscopy techniques - electron microscopy, scanning electron microscopy, transmission electron microscopy, atomic force microscopy - diffraction techniques - X-ray spectroscopy - thermogravimetric analysis of nanomaterials.

UNIT IV

SEMICONDUCTOR NANOSTRUCTURES

Quantum confinement in semiconductor nanostructures - quantum wells, quantum wires, quantum dots, super lattices-epitaxial growth of nanostructures-MBE, metal organic VPE, LPE - carbon nano tubes- structure, synthesis and electrical properties -applications- quantum well laser- quantum efficiency of semiconductor nanomaterials

UNIT V

NANOMACHINES AND NANODEVICES

Microelectromechanical systems (MEMS) and Nanoelectromechanical systems (NEMS)-fabrication, actuators-organic FET- principle, description, requirements, integrated circuits- single electron transistor - - organic photovoltaic cells- spintronics

22OPH02 SEMICONDUCTOR PHYSICS AND DEVICES

3003

Course Objectives

- Impart knowledge in physical properties of semiconducting materials
- Analyze the factors affecting the operation of semiconductor devices
- Apply the physics of semiconductors to develop semiconductor devices

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change

Course Outcomes (COs)

- 1. Analyze the formation of drift current due to the movement of charge carriers under an electric field
- 2. Analyze the energy band diagram in thermal equilibrium and space charge width of PN junction
- 3. Analyze the operation of a Bipolar Junction Transistor (BJT) in active, cutoff, and saturation modes
- 4. Apply the principles of charge storage in floating-gate transistors for non-volatile memory applications
- 5. Outline the efficiency factors affecting the performance of opto-electronic devices

UNIT I

9 Hours

ENERGY BANDS AND CARRIER TRANSPORT PROPERTIES

Energy Bands: Formation of energy bands - doping effects - energy levels - electron and hole concept in semiconductor. Carrier transport: Carrier drift-drift current density - conductivity- diffusion current density - total current density

UNIT II

P-N JUNCTION

Basic structure and fabrication process of p-n junction - current - voltage characteristics - energy band diagram - equilibrium Fermi levels - depletion region - junction breakdown phenomena - zener avalanche breakdown.

UNIT III

BIPOLAR JUNCTION TRANSISTOR

The basic transistor action - operation in the active mode - current gain - static characteristics - carrier distribution in emitter, base and collector region - modes of operation - current - voltage characteristics of common base and emitter configuration - frequency response and switching of bipolar transistor

UNIT IV

MOSFET

The ideal MOS diode - basic fundamentals and characteristics - types - CMOS and BiCMOS - CMOS inverter - MOSFET on insulator - thin film transistor (TFT) - silicon on insulators (SOI) devices -MOS Memory structures - DRAM and SRAM

UNIT V

PHOTONIC DEVICES

Radiative transitions and optical absorption-light emitting diodes-organic LED - infrared LED semiconductor laser - temperature effect - photo detector - photo diode - silicon and compound semiconductor solar cells - efficiency

22OPH03 APPLIED LASER SCIENCE 3003

Course Objectives

- Impart knowledge on laser science
- Explore different strategies for producing lasers
- Create expertise on the applications of lasers in various fields

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change

Course Outcomes (COs)

- 1. Illustrate the transition mechanisms and the components of a laser system
- 2. Compare the different types of lasers based on pumping method, active medium and energy levels
- 3. Compute the rotation of earth, velocity and distance using lasers and apply the same for day today applications
- 4. Analyze the role of lasers in surgical and endoscopy applications
- 5. Apply the laser techniques in industrial applications

Articulation Matrix

UNIT I

LASER FUNDAMENTALS

Introduction - principle - absorption and emission of light - thermal equilibrium - Einstein's prediction - Einstein's relations - A and B coefficients - condition for large stimulated emission - spontaneous and stimulated emission in optical region - light amplification - condition for light amplification population inversion- Components of lasers - pumping methods - pumping mechanisms - optical resonator

UNIT II

LASER BEAM CHARACTERISTICS AND TYPES

Characteristics of laser - Classification of lasers - principle, construction, working, energy level diagram and applications of molecular gas laser (CO2 laser) - liquid laser (dye laser) - excimer laser - Solid state laser (Nd:YAG laser) - semiconductor laser (homojunction laser).

UNIT III

LASERS IN SCIENCE

Introduction - Harmonic generation (SHG) - Stimulated Raman emission - lasers in chemistry - laser in nuclear energy - lasers and gravitational waves - rotation of the earth - measurement of distance -Light detection And Ranging (LIDER) - velocity measurement - holography

UNIT IV

LASERS IN MEDICINE AND SURGERY

Light induced biological hazards: Eye and skin - Eye laser surgery - photocoagulations - homeostasis - dentistry - laser angioplasty - different laser therapies - advantages & disadvantages - laser endoscopy.

UNIT V

LASERS IN INDUSTRY

Applications in material processing: laser welding - hole drilling - laser cutting - Lasers in electronics industry: information storage - bar code scanner- Lasers in defence: laser based military weapons - laser walls.

22OPH04 BIOPHOTONICS

3003

Course Objective:

- To understand the light-matter interaction in biological cells or tissues by using the principles of optics and lasers.
- To apply the properties of biological cells or tissues in biomedical applications by various optical imaging, sensing and activation techniques.
- To analyze the concepts of Modern optical measurement techniques and devices in early detection of disease and cure them.

Programme Outcomes (POs)

- PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

Course Outcomes (COs)

- 1. Infer the laws of optics and lasers to interpret the biological cells and tissues. Analyze the fundamental laws of optics and their role in light interaction with biological cells and tissues
- 2. Apply the principles of light interaction with biological tissues to enhance imaging resolution and contrast
- 3. Use laser tweezers techniques to infer the activities of cells (tissues) and explain the single molecule detection processes in medical diagnosis.
- 4. Outline the properties of ultra short laser pulses and tissue engineering to rectify the affecting factors in biological cells.
- 5. Compare the various types of bio-imaging methods to detect the infected cells and molecules in biological science.

UNIT I

INTRODUCTION TO BIOPHOTONICS

Light as Photon Particles - Coherence of light - lasers - classification of lasers - Mechanisms of Nonlinear Optics (NLO) processes associated with Biophotonics - Light scattering mechanisms: Rayleigh scattering, Miescattering, Brillouin Scattering, Raman Scattering -Different light sources -Quantitative description of light: Radiometry

UNIT II PHOTOBIOLOGY

Interaction of light with cells and tissues - Light - Tissue Interaction Variables - Light - Tissue Interaction Theory: Radiative Transport Theory - Photo process in biopolymers - In Vivo Photoexcitation – photo-induced physical, chemical, thermal and mechanical effects in biological systems - Optical biopsy - Single molecule detection

UNIT III

BIONANO PHOTONICS

Laser Microtools, Semiconductor quantum dots for bioimaging, Metallic nanoparticles and nanorods for biosensing – Optical biosensors: Fibre-Optic, evanescent wave, surface Plasmon resonance (SPR) based biosensors – biomaterials for photonics – Principle and design of laser tweezers – laser trapping and dissection for biological manipulation.

UNIT IV

TISSUE ENGINEERING WITH LIGHT

Basics of tissue optics: Light absorption and scattering in tissues, Wavelength effects and spectra- the therapeutic window, Light penetration in tissues – Absorbing agents in tissues and blood –Skinoptics, response to the UV radiation, Optical parameters of tissues – tissue welding – tissue contouring – tissue regeneration – Femto laser surgery – low level light therapy and photo dynamic therapy

UNIT V

BIO-IMAGING TECHNIQUES AND ITS APPLICATIONS

An overview of optical imaging - Fluorescence Microscopy - Scanning Microscopy - In vivo Confocal Microscopy - Multi photon Microscopy - Optical Coherence Tomography (OCT) -Fluorescence Resonance Energy Transfer (FRET) imaging - fluorescence lifetime imaging Microscopy (FLIM) - Nonlinear optical imaging - Coherent Anti-stokes Raman Scattering -**Bioimaging Applications.**

22OPH05 PHYSICS OF SOFT MATTER 3003

Course Objectives

- To recognize the properties of soft matter and hard matter
- To understand the fundamental interactions of colloids and gels
- To explain the structure and phase behavior of liquid crystals and supramolecules
- To summarize the soft matter proprties of structures and components of life

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

- 1. Analyze the structural and mechanical differences between soft matter and hard matter
- 2. Exemplify the fundamental interactions and stability of colloids and gels
- 3. Analyze the optical and electro-optical properties of liquid crystals used in display technologies
- 4. Outline the aggregation and phase behavior of surfactants, polymers, copolymers and block copolymers
- 5. Analyze the soft matter behavior of nucleic acids, proteins, polysaccharides and membranes

9 Hours

CONDENSED MATTER

Intermolecular forces-Condensation and freezing-mechanical response: Hookean solid-Newtonian liquid-viscoelasticity. Glasses: relaxation time-viscosity- glass forming liquids. Soft matter: length scales-fluctuations and Brownian motion

UNIT II

COLLOIDAL DISPERSIONS & GELS

Forces between colloidal particles: vander Waals forces-electrostatic double layer forces-steric hindrance-depletion interactions. Stability and phase behaviour: Crystallisation-strong colloids-weak colloids.Physical and chemical gels-classical theory of gelation-elasticity of gels

UNIT III

LIQUID CRYSTALS

Liquid crystal phases-distortions and topological defects-electrical and magnetic properties-polymer liquid crystals-Fredricks transition and liquid crystal displays

UNIT IV

SUPRAMOLECULAR SELF ASSEMBLY

Aggragation and phase separation-types of micelles- bilayers and vesicles. Phase behaviour of concentrated surfactant solutions-phase separation in polymers, copolymers and block copolymers

UNIT V

SOFT MATTER IN NATURE

Components and structures of life-Nucleic acids-proteins-interaction between proteins-polysaccharides-membranes

22OCH01 CORROSION SCIENCE AND ENGINEERING

Course Objectives

- Analyse the loss incurred due to corrosion in different sectors and terminologies related to corrosion
- Identify forms and types of corrosion with suitable mechanism
- Apply various methods of corrosion control, corrosion testing and monitoring

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Course Outcomes (COs)

- 1. Apply fundamental principles of corrosion science to calculate corrosion rates, analyze metal degradation and interpret Pourbaix diagrams to predict corrosion behavior in various industrial environments.
- 2. Compare different corrosion types on metals when exposed to air, water and at high temperatures (> 100 C)
- 3. Analyze the mechanism of corrosion on steel, iron, zinc and copper metal surfaces
- 4. Analyze the rate of corrosion on metals using electrochemical methods of testing
- 5. Analyze the correct materials, design and operation conditions to reduce the likelihood of corrosion in new equipment and constructions

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

Articulation Matrix

UNIT I

CORROSION

Importance of corrosion - spontaneity of corrosion - units of corrosion rate (mdd and mpy) - direct and indirect damage by corrosion - importance of corrosion prevention in industries - Pilling Bedworth ratio and its significance - passivation - area relationship in both active and passive states of metals - Pourbaix digrams of Mg, Al and Fe and their advantages and disadvantages

UNIT II

TYPES OF CORROSION

Eight forms of corrosion: uniform, galvanic, crevice corrosion, pitting, intergranular corrosion, selective leaching, erosion corrosion and stress corrosion-Catastrophic oxidation corrosion

9 Hours

3003

2 110u13

UNIT III

MECHANISM OF CORROSION

Hydrogen embrittlement - corrosion fatigue - filiform corrosion - fretting damage and microbes induced corrosion. Corrosion mechanism on steel, iron, zinc and copper metal surfaces

UNIT IV

CORROSION RATE AND ITS ESTIMATION

Rate of corrosion: Factors affecting corrosion. Electrochemical methods of polarization: Tafel extrapolation polarization and linear polarization. Weight loss method - testing for intergranular susceptibility and stress corrosion. Non destructive testing methods: Visual testing - liquid penetrant testing - magnetic particle testing - Ultrasonic monitoring, and eddy current testing

UNIT V

Reference(s)

CORROSION CONTROL METHODS

Fundamentals of cathodic protection - types of cathodic protection(sacrificial anodic and impressed current cathodic protection). Stray current corrosion, problems and its prevention. Protective coatings: Metal coatings: Hot dipping (galvanizing, tinning and metal cladding) - natural inhibitors. Selection of suitable design for corrosion control

9 Hours

22OCH02 POLYMER SCIENCE

3003

Course Objectives

- Explain the properties of different polymers with its mechanism
- Select the appropriate polymerization techniques to synthesize the polymers
- Identify suitable polymers for various industrial applications

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Course Outcomes (COs)

- 1. Apply knowledge of polymerization mechanisms to predict the formation of different polymer products under various reaction conditions and catalysts
- 2. Apply suitable polymerization techniques to synthesize the high quality polymers
- 3. Apply the structural, thermal, and mechanical properties of polymers for different industrial applications
- 4. Apply the polymer processing methods to design polymer products
- 5. Analyze the polymers used in electronic and biomedical applications.

Articulation Matrix

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

5	1	3	2	-	_	-	-	_	-	-	-	-	-	-

UNIT I

POLYMERS AND ELASTOMERS

Classification of polymers - Mechanism: Addition polymerization - free radical, cationic, anionic and co-ordination (Ziegler-Natta) polymerization - copolymerization - condensation polymerization (nylon-6,6) -ring opening polymerization (nylon-6). Elastomers: Natural rubber and synthetic rubber: styrene -butadiene rubber (SBR), butyl, neoprene, thiocol rubbers. High performance polymers: polyethers, polyether ether ketone (PEEK), polysulphones and polyimides

UNIT II

POLYMERIZATION TECHNIQUES

Homogeneous and heterogeneous polymerization - bulk polymerization (PMMA, PVC) - solution polymerization - polyacrylic acid, suspension polymerization (ion-exchange resins) - emulsion polymerization (SBR) - advantages and disadvantages of bulk and emulsion polymerization. Melt solution and interfacial poly-condensation

UNIT III

CHARACTERIZATION AND TESTING

Characterization of polymers by Infrared Spectroscopy (IR) and Nuclear Magnetic Spectroscopy (NMR) - Thermal properties: TGA and DSC - Testing tensile strength - Izod impact - Compressive strength - Rockwell hardness - Vicot softening point - water absorption

UNIT IV

POLYMER PROCESSING

Moulding: Compression - injection - extrusion and blow mouldings. Film casting - calendering. Thermoforming and vacuum formed polystyrene - foamed polyurethanes. Fibre spinning: melt, dry and wet spinning. Fibre reinforced plastics fabrication: hand-layup - filament winding and pultrusion

UNIT V

SPECIALITY POLYMERS

Preparation and properties of heat resistant and flame retardant polymers. Polymers for electronic applications: liquid crystalline, conducting and photosensitive polymers - E waste management. Polymer for biomedical applications: artificial organs, controlled drug delivery, Scaffolds in tissue Engineering -waste management.

22OCH03 ENERGY STORING DEVICES

Course Objectives

- Compare the energy density of commercialized primary and secondary batteries.
- Classify the fuel cells and compare their efficiency in different environmental conditions.
- Demonstrate the various energy storage devices and fuel cells.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Course Outcomes (COs)

- 1. Apply the parameters required for operation of a cell to evaluate the capacity of energy storage devices.
- 2. Compare the electrodes, electrolyte and cell reactions of different types of primary, secondary batteries and infer the selection criteria for commercial battery systems with respect to commercial applications.
- 3. Analyze fuel cells based on its construction, production of current and applications.
- 4. Analyze the methods of storing hydrogen fuel with its environmental applications.
- 5. Analyze the future prospects of renewable energy, hydrogen economy, and the efficiency of various generations of solar cells in energy production.

UNIT I

BASICS OF CELLS AND BATTERIES

Components - classification - operation of a cell - theoretical cell voltage - capacity - specific energy - energy density of lithium and lead acid battery - charge efficiency- charge rate - charge retention - closed circuit voltage - open circuit voltage current density - cycle life - discharge rate-over charge- over discharge

UNIT II

BATTERIES FOR PORTABLE DEVICES AND ELECTRIC VEHICLES

Primary batteries: zinc-carbon - magnesium, and mercuric oxide - recycling/safe disposal of used cells. Secondary batteries: lead acid - nickel-cadmium - lithium ion batteries - rechargeable zinc alkaline battery. Reserve batteries: Zinc-silver oxide - lithium anode cell - photogalvanic cells. Battery specifications for cars and automobiles. Extraction of metals from battery materials.

10 Hours

3003

UNIT III

TYPES OF FUEL CELLS

Importance and classification of fuel cells: Description, working principle, components, applications and environmental aspects of the following types of fuel cells: alkaline fuel cells - phosphoric acid solid oxide - molten carbonate and direct methanol fuel cells

UNIT IV

HYDROGEN AS A FUEL

Sources and production of hydrogen: Electrolysis and photocatalytic water splitting. Methods of hydrogen storage: High pressurized gas - liquid hydrogen type - metal hydride. Hydrogen as engine fuel - features, application of hydrogen technologies in the future – limitations.

UNIT V

ENERGY AND ENVIRONMENT

Future prospects of renewable energy and efficiency of renewable fuels - economy of hydrogen energy. Solar Cells: First, second, third and fourth generation solar cell - photobiochemical conversion cell.

22OMA01 GRAPH THEORY AND

COMBINATORICS

Course Objectives

- This course comprehends the graphs as a modeling and analysis tool in computer science & Engineering
- It introduces the structures such as graphs & trees and techniques of counting and combinations, which are needed in number theory based computing and network security studies in Computer Science.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes (COs)

- 1. Apply the basic ideas of Graph and its characteristics.
- 2. Assess the characteristics of trees and its properties.
- 3. Predict the coloring of graphs and its applications in the respective areas of engineering.
- 4. Compute the permutations and combinations in the engineering field.
- 5. Demonstrate the types of generating functions and their applications in engineering.

Articulation Matrix

UNIT I

INTRODUCTION

Graphs - Introduction - Isomorphism - Sub graphs - Walks, Paths, Circuits - Connectedness - Components - Euler graphs - Hamiltonian paths and circuits - Trees - Properties of trees - Distance and centers in tree - Rooted and binary trees.

UNIT II

TREES, CONNECTIVITY

Spanning trees - Fundamental circuits - Spanning trees in a weighted graph - cut sets - Properties of cut set - All cut sets - Fundamental circuits and cut sets - Connectivity and separability - Network flows - 1-Isomorphism - 2-Isomorphism - Combinational and geometric graphs - Planer graphs - Different representation of a planer graph.

9 Hours

3003

UNIT III

MATRICES, COLOURING AND DIRECTED GRAPH

Chromatic number - Chromatic partitioning - Chromatic polynomial - Matching - Covering - Four color problem - Directed graphs - Types of directed graphs - Digraphs and binary relations - Directed paths and connectedness - Euler graphs.

UNIT IV

PERMUTATIONS

Fundamental principles of counting - Permutations and combinations - Binomial theorem combinations with repetition - Combinatorial numbers - Principle of inclusion and exclusion -Derangements - Arrangements with forbidden positions.

UNIT V

GENERATING FUNCTIONS

Generating functions - Partitions of integers - Exponential generating function - Summation operator -Recurrence relations - First order and second order - Non-homogeneous recurrence relations - Method of generating functions.

22OGE01 PRINCIPLES OF MANAGEMENT

Course Objectives

- To develop cognizance about importance of management principles.
- Extract the functions and responsibilities of managers.
- To Study and understand the various HR related activities.
- Learn the application of the theories in an organization.
- Analyze the position of self and company goals towards business.

Programme Outcomes (POs)

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques

Course Outcomes (COs)

- 1. Students will be able to understand the basic concepts of Management.
- 2. Have some basic knowledge on planning process and its Tools & Techniques.
- 3. Ability to understand management concept of organizing and staffing.
- 4. Ability to understand management concept of directing.
- 5. Ability to understand management concept of controlling.

Articulation Matrix

UNIT I

INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS

Definition of Management Science or Art Manager Vs Entrepreneur-types of managers -Managerial roles and skills Evolution of Management Scientific, Human Relations, System and Contingency approaches Types of Business organization - Sole proprietorship, partnership, Company - public and private sector enterprises - Organization culture and Environment Current Trends and issues in Management.

UNIT II

PLANNING

Nature and purpose of planning - Planning process - Types of planning - Objectives - Setting objectives - Policies - Planning premises - Strategic Management - Planning Tools and Techniques - Decision making steps and process.

9 Hours

9 Hours

3003

UNIT III

ORGANISING

Nature and purpose – Formal and informal organization - Organization chart - Organization Structure Types - Line and staff authority - Departmentalization - Delegation of authority - Centralization and decentralization - Job Design - Human Resource - Management - HR Planning, Recruitment, Selection, Training and Development, Performance Management, Career planning and management

UNIT IV

DIRECTING

Foundations of individual and group behaviour - Motivation-Motivation theories - Motivational techniques - Job satisfaction - Job enrichment - Leadership-types and theories of leadership - Communication-Process of communication - Barrier in communication Effective communication-Communication and IT.

UNIT V

CONTROLLING

System and process of controlling - Budgetary and non-Budgetary control techniques - Use of Computers and IT in Management control - Productivity problems and management - Control and Performance-Direct and preventive control - Reporting.

22OGE02 ENTREPRENEURSHIP DEVELOPMENT I 3003

Course Objectives

- To develop an understanding of the basics of entrepreneurship and its role in economic development.
- To explore fundamental concepts of creativity and innovation for effective idea generation techniques.
- To familiarize students with the principles of business laws relevant to entrepreneurial ventures.
- To empower learners to apply financial tools for project evaluation and resource management.
- To enhance the ability to manage operations through strategic planning and quality improvement techniques.

Programme Outcomes (POs)

PO6: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO9: Function effectively as an individual, and as a member or leader in teams, and in multidisciplinary settings.

PO12: Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO2: Choose the appropriate methodology, materials, tools and machinery to manufacture quality products at affordable cost

Course Outcomes (COs)

- 1. Apply entrepreneurial concepts to analyze the role of entrepreneurship in economic development.
- 2. Experiment with creativity and innovation techniques to generate and evaluate business ideas effectively.
- 3. Utilize knowledge of business laws to ensure legal compliance in entrepreneurial ventures.
- 4. Plan financial strategies using tools like cash flow analysis and break-even analysis to support business decisions.
- 5. Organize and optimize business operations through strategic facility design and quality improvement methods like lean manufacturing and Six Sigma.

22OGE03 ENTREPRENEURSHIP DEVELOPMENT II 3003

Course Objectives

- To develop an understanding of marketing strategies, market segmentation, and the marketing mix to effectively address business challenges.
- To equip learners with the knowledge of human resource planning, recruitment, and training, alongside insights into labor laws like the Factories Act 1948.
- To familiarize students with the principles of direct and indirect taxation, including GST, income tax, and corporate tax, to ensure compliance and financial efficiency.
- To explore fundamental concepts of government policies, institutional support, and financial assistance available for entrepreneurial ventures.
- To train students to effectively prepare comprehensive business plans encompassing technical, financial, and market feasibility to evaluate entrepreneurial viability.

Programme Outcomes (POs)

PO6: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO9: Function effectively as an individual, and as a member or leader in teams, and in multidisciplinary settings.

PO12: Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO2: Choose the appropriate methodology, materials, tools and machinery to manufacture quality products at affordable cost.

Course Outcomes (COs)

- 1. Apply marketing concepts such as segmentation, targeting, and positioning to develop effective marketing strategies and plans.
- 2. Identify appropriate human resource practices, including recruitment, selection, and training, to enhance organizational performance.
- 3. Utilize knowledge of taxation systems, including GST and corporate tax, to ensure financial compliance and efficiency in business operations.
- 4. Analyze government policies and institutional support to discover suitable financial and non-financial assistance for entrepreneurial initiatives.
- 5. Plan and construct a detailed business plan, including SWOT analysis, financial viability, and technical feasibility, to evaluate the success of entrepreneurial ventures.

22OGE04 NATION BUILDING, LEADERSHIP AND SOCIAL RESPONSIBILITY

Course Objectives

- To understand the importance of National Integration, Patriotism and Communal Harmony
- To outline the basic awareness about the significance of soft skills in professional and interpersonal communications and facilitate an all-round development of personality
- To analyze the different types of responsibility role of play for the improvement of society

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change

Course Outcomes (COs)

- 1. Apply the understanding of religion-cultural diversity of the country and its impact on the lives of the people and their beliefs
- 2. Build a sense of responsibility, smartness in appearance and improve self confidence
- 3. Develop the sense of self-less social service for better social & community life
- 4. Apply the importance of Physical and Mental health and structure of communication organization and various mode of communication
- 5. Analyze the organizational structure, entry modes, and operational roles of Indian armed forces, CAPF, and NCC while developing leadership capabilities

Articulation Matrix

UNIT I

NATIONAL INTEGRATION

Importance & Necessity, Factors Affecting National Integration, Unity in Diversity. Threats to National Security. Water Conservation and Rain Harvesting, Waste Management and Energy Conservation. Leadership Capsule-Traits-Indicators-Motivation-Moral Values-Honor Code-Case Studies: Shivaji, Jhansiki Rani, Case Studies–APJ Abdul kalam, Deepa Malik, Maharana Pratap, N Narayan Murthy Ratan Tata Rabindra Nath Tagore, role of NCC cadets in 1965 war.

9 Hours

3003

PERSONALITY DEVELOPMENT AND LEADERSHIP

Intra & Interpersonal skills - Self-Awareness- &Analysis, Empathy, Critical & creative thinking, Decision making and problem solving, Communication skills, Group Discussion – copping with stress and emotions, changing mindset, Public Speaking, Time Management, Social skills, Career counseling, SSB procedure and Interview skills.

UNIT III

SOCIAL SERVICE, COMMUNITY DEVELOPMENT AND ENVIRONMENTAL AWARENESS

Basics of social service and its need, Types of social service activities, Objectives of rural development programs and its importance, NGO's and their contribution in social welfare, contribution of youth and NCC in Social welfare. Protection of children & women safety, Road/ Rail Travel Safety, New initiatives, Cyber and mobile security awareness.

Disaster management Capsule-Organization-Types of Disasters-Essential Services-Assistance-Civil Defence Organization

UNIT IV

HEALTH, HYGIENE AND COMMUNICATION

Sanitation, First Aid in Common Medical Emergencies. Health, Treatment and Care of Wounds. Yoga- Introduction, Definition, Purpose, Benefits. Asanas-Padamsana, Siddhasana, Gyan Mudra, Surya Namaskar, Shavasana, Vajrasana, Dhanurasana, Chakrasana, Sarvaangasana, Halasanaetc.

Obstacle Training Contact: Obstacle training - Intro, Safety measures, Benefits, Straight balance, Clear Jump, Gate Vault, ZigZagBalance, High Wall etc.

COMMUNICATION: Basic Radio Telephony (RT) Procedure-Introduction, Advantages, Disadvantages, Need for standard- Procedures-Types of Radio Telephony Communication-Radio telephony procedure, Documentation.

UNIT V

ARMED FORCES AND NCC GENERAL

Army, navy, Air force and Central armed policed forces- Modes of entry into army, police and CAPF-Naval expeditions & campaigns. History, Geography of Border / Coastal areas. EEZ maritime security & ICG. Modes of Entries in armed forces. Security challenges & role of cadets in Border management.

Aims, Objectives and org of NCC- Incentives- Duties of NCC cadets- NCC Camps: types and conduct.

22OME01 DIGITAL MANUFACTURING 3003

Course Objectives

- To understand the process of generating 3D Computer Aided Design (CAD) model by different method.
- To explain the constructional features and develop simple program for CNC lathe and Milling machines.

9 Hours

9 Hours

Total: 45 Hours

9 Hours

- To provide an exhaustive knowledge on various generic process and benefits of Additive Manufacturing.
- To familiarize about materials and process parameters of liquid and solid based AM techniques.
- To educate powder based methodology and emerging trends with case studies, applications of AM techniques.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Design a 3D model from the 2D data.
- 2. Develop a CNC program for simple components.
- 3. Generate stl file and manipulate parameters of AM machine
- 4. Select appropriate liquid or solid materials based AM process to the respective application
- 5. Select appropriate process to fabricate a functional/prototype for aerospace, automotive, electronics, manufacturing and medical applications.

Articulation Matrix

UNIT I

CAD MODELING

9 Hours

Introduction - Design process - Stages. CAD - Input and Output devices, Modeling methods - Wire frame modelling, Surface modelling, Solid modelling - Constructive Solid Geometry and Boundary Representation Techniques. CAD/CAM data exchange - IGES, STEP. Product Life cycle management (PLM).

AUTOMATION AND CNC MACHINES

Introduction to Automation - Definition, types, reasons for automating. CNC Machines - Principles, types, features, advantages, applications. CNC Machine structure - Linear motion bearings, Recirculating ball bearings, drive system, and control system. CNC Lathe and Milling programming -Linear and circular interpolation, threading and drilling programs.

UNIT III

ADDITIVE MANUFACTURING

Introduction - Impact of Additive Manufacturing (AM) and Tooling on Product Development -Distinction between AM and CNC Machining - The Generalized AM Process chain - CAD Model -Input file formats - Generation and Conversion of STL file - File Verification and Repair - Build File Creation - Part Construction - Part Cleaning and finishing - AM Benefits - Classification of AM process

UNIT IV

LIQUID AND SOLID MATERIAL BASED SYSTEMS

Stereo lithography Apparatus (SLA), Digital Light Processing (DLP), Fused Deposition Modelling (FDM) and Laminated Object Manufacturing (LOM) - Working Principle, Construction, Process, Materials and Applications

UNIT V

POWDER BASED PROCESSES AND APPLICATIONS OF ADDITIVE MANUFACTURING

Selective Laser Sintering (SLS), Color Jet Printing (CJP), Electron Beam Melting (EBM) and Laser Engineered Net Shaping (LENS) - Working Principle, Construction, Process Variables, Materials and Applications. Reverse Engineering using 3D scanner. Application of Additive Manufacturing in Medical field, Manufacturing, Automotive industries, Aerospace and Electronics and Retail industries.

7 Hours

22OME02 INDUSTRIAL PROCESS ENGINEERING 3003

Course Objectives

- To impart the knowledge on production planning methodologies and layout design
- To learn about production planning and its control methods
- To provide the knowledge of work study, process charts and ergonomic condition
- To impart the knowledge on inventory control and material handling
- To learn about system analysis and different types of maintenance processes

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations

PO11. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Select proper plant layout for the required production system
- 2. Plan the resources required for the production and to perform the control methods
- 3. Apply work study method, prepare charts to outline the process and develop ergonomic condition suitable for the processes.
- 4. Analyze the inventory required based on production needs and material handling
- 5. Perform system analysis and use different types of maintenance process for smooth operations.

CO No	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

5	2	3	1	-	2	-	-	-	-	-	-	-	-	2	-

INDUSTRIAL ENGINEERING AND PRODUCTION SYSTEM

Industrial engineering - Concept, History and development, Applications, Roles of Industrial engineer- Production management, Industrial engineering versus production management, operations management. Plant layout, Criteria for good layout, Types of layout - Process layout, Product layout, Combination layout and fixed position layout, Flow (material movement) pattern, Workstation Selection and design.

UNIT II

PROCESS PLANNING AND PRODUCTION CONTROL

Introduction to Process planning-Definition, Procedure, Process selection, Machine capacity, Process sheet.Process analysis - Group technology, classification and coding system, formation of component family - Production planning, loading, scheduling. Production control -dispatching, routing - Progress control bar, curve, Gantt chart, route and schedule chart.

UNIT III

WORK STUDY AND ERGONOMICS

Work study - Definition, Need, Advantages, objectives of method study and work measurement, method study procedure, Process chart - symbols, outline process chart, flow process chart, principles of motion economy, ergonomics- applications of ergonomic principles in the shop floor- work benches-seating arrangement, Industrial physiology.

UNIT IV

INVENTORY MANAGEMENT

Inventory control, classification, management, objectives, functions. Economic order quantity, Economic batch quantity, inventory models, ABC analysis, Material Requirement Planning(MRPI), Manufacturing Resource Planning (MRPII), Operating cycle, lean manufacturing, Supply chain management - Material handling.

UNIT V

SYSTEM ANALYSIS AND MAINTENANCE

System concept - system analysis, systems engineering, value engineering, value control, types of values. Plant maintenance - objectives, importance. Maintenance engineer - duties, functions and responsibilities. Types - breakdown, scheduled, preventive and predictive - Plant maintenance schedule, Condition monitoring.

22OME03 MAINTENANCE ENGINEERING

3003

Course Objectives

- To understand the principles, objectives and importance of maintenance adopted in industry for successful progress.
- To introduce different maintenance categories, its merits and types of lubrication.
- To expose the idea of condition monitoring, methods and instruments used for allied measurements.
- To learn about failure analysis and repair methods for few mechanical elements.
- To promote computerization in maintenance and inventory management.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

Course Outcomes (COs)

- 1. Explain the principles, objectives and importance of maintenance adopted in industry.
- 2. Select the suitable maintenance category and lubrication type.
- 3. Apply the appropriate methods and instruments for condition monitoring.
- 4. Analyze the failures of mechanical systems and select suitable repair methods.
- 5. Utilize computers in maintenance and inventory management.

PRINCIPLES OF MAINTENANCE PLANNING

Basic principles of maintenance planning - Objectives and principles of planned maintenance activity - Importance and benefits of sound maintenance systems - Maintenance organization - Maintenance economics.

UNIT II

MAINTENANCE CATEGORIES AND LUBRICATION

Maintenance categories - Comparative merits of each category - Preventive maintenance, Maintenance schedules, Repair cycle - Total Productive Maintenance - Principles and methods of lubrication.

UNIT III

CONDITION MONITORING

Condition based maintenance - Cost comparison with and without Condition Monitoring - Methods and instruments for condition monitoring - Noise, vibration, wear and temperature measurement.

UNIT IV

FAILURE ANALYSIS AND REPAIR METHODS

Failure analysis - Failures and their development - Role of Non Destructive Testing in failure analysis - Repair methods for bearings, cylinder block, fuel pump, shaft.

UNIT V

Reference(s)

COMPUTER AIDED MAINTENANCE MANAGEMENT

Approach towards Computerization in maintenance - computer-aided maintenance management system (CAMMS) - Advantages of CAMMS - spare parts and inventory centre performance reporting.

220ME04 SAFETY ENGINEERING

Course Objectives

- To study the principles of safety management system.
- To introduce the provisions contained in the industrial laws.
- To provide knowledge on safety requirements for engineering industry.
- To learn safety requirement for chemical industry.
- To study the various safety measures adopted in construction industries.

Programme Outcomes (POs)

PO1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences

PO5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design

documentation, make effective presentations, and give and receive clear instructions

PO12. Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PSO1. Implement new ideas on product / process development by utilizing the knowledge of design and manufacturing.

PSO2. Apply knowledge acquired in mechanical engineering with an analytical / computational tools to design, analyze and provide solutions for fluid flow and thermal related applications.

PSO3. Execute professional capabilities to competitively work in industries with global Standards by implementing recent tools and techniques.

Course Outcomes (COs)

- 1. Analyze the safety management system of an industry.
- 2. Apply the provisions of acts and rules in industries.
- 3. Evaluate and review the safety performance followed in various industries.
- 4. Evaluate safety appraisal practices in chemical industries.
- 5. Generate safety reports for construction industries.

SAFETY MANAGEMENT

Concepts - Evolution, International Labour Organization (ILO), National Safety Council, Techniques - Job Safety Analysis (JSA), Safety survey, Safety inspection, Safety Sampling, Accident Reporting and Investigation - Concept of an accident, Accident causation models, cost of accident, investigation, Safety Performance Monitoring - Safety indices.

UNIT II

SAFETY AND LAW

Factory Act 1948-Safety and Health chapters, Tamil Nadu Factories Rules- Safety and Health chapters, Environment and Pollution Laws, Building and other construction works act 1996, Electricity Rules.

UNIT III

SAFETY IN ENGINEERING INDUSTRIES

Safety in machine shop,- Principles of machine guarding - Personal protective equipment- Safety in handling industrial gases - Safety in cold forming and hot working of metals- Safety in finishing, inspection and testing, heat treatment, electro plating, leak test, radiography.

UNIT IV

SAFETY IN CHEMICAL INDUSTRIES

Safety in process design, unit operations, pressure vessel, heat exchanger, safety valves -Plant commissioning and inspection, pressure vessel, Plant maintenance and emergency planning, management of maintenance HAZOP study.

UNIT V

SAFETY IN CONSTRUCTION INDUSTRY

Construction regulations, contractual clauses, permit to work, - Education and training-Hazards of construction and prevention- excavation, scaffolding, dismantling, road works, construction of high rise buildings - Working at heights,-Working on fragile roofs, work permit systems-Construction machinery, cranes, chain pulley blocks, earth moving equipment, conveyors- Manual handling, Safety in demolition work, - Safety in confined spaces Total: 45 Hours
